Acta Geotechnica

An International Journal for Geoengineering
Editor-in-chief: W. Wu
Editors: R. I. Borja, G. Viggiani, H. S. Yu

- An international journal compiling all fields of geoengineering
- Focus on interplay between geomechanical models and engineering applications
- Strong international coverage of cutting edge research in geoengineering
- Fast publication times

New Journal as of JANUARY 2006
Acta Geotechnica

Aims and Scope

Acta Geotechnica is an international journal devoted to the publication and dissemination of basic and applied research in geoengineering – an interdisciplinary field dealing with geomaterials (soils and rocks). Emphasis is placed on the interplay between the geomechanical models and their engineering applications. The journal welcomes original research papers on the fundamental concepts in geomechanics and their novel applications in geoengineering based on experimental, analytical and/or numerical approaches. In addition to the scientific merit, the contributions for publication are selected for their application potential in geoengineering leading to reliable prediction and rational and sustainable design.

The main purpose of the journal is to foster deep understanding of the fundamental mechanisms behind the multiscale phenomena and processes in geomaterials, from kilometer-scale problems as they occur in geoscience, to a much finer scale up to and including the nano-scale, as well as their potential impact to geoengineering. The journal intends to capture and archive the advancement in the field of geoengineering in a timely manner and in one place.

The journal contains research papers, review articles, short notes and letters to the editors. The topics of interest include experimental, analytical and numerical investigations into the mechanical, physical, hydraulic and thermal properties of geomaterials as multiphase media under different external agencies, e.g. monotonic, cyclic, static, dynamic, transient and long-term loading, drawing upon the various applications in geoengineering, e.g. foundation, dam, mining, tunnelling, geohazard, geoenvironmental and petroleum engineering.

Forthcoming Papers:

- On a viscoplastic model for rocks with mechanism-dependent characteristic times, A. F. Fossum, R. M. Brannon (USA)

- Conditions for instabilities in collapsible solids including volume implosion and compaction banding, R. I. Borja (USA)

- The nanogranular nature of shale, F.-J. Ulm, Y. Abousleiman (USA)

- Compaction bands and induced permeability reduction in Tuffeau de Maastricht calcarenite, T. Baxevanis, E. Papamichos, O. Flornes, I. Larsen (Norway)
Editor-in-Chief:
W. Wu
Institut für Geotechnik
Universität für Bodenkultur
Feistmantelstr. 4, 1180 Vienna, Austria

Make Acta Geotechnica your first choice for publication

► Fast publication times with ‘Online First’
► Easy submission through ‘Editorial Manager’, our state-of-the-art submission and peer-review system
► Maximum exposure – more than 15 million individuals worldwide will enjoy full-text access via SpringerLink, one of the world’s leading interactive content-platforms

► All articles with DOI (Digital Object Identifier) for citation
► Included in Cross-Ref – reference links into and out of electronic content
Dear Librarian,
Having reviewed this journal, I recommend that the library subscribes to

☐ Acta Geotechnica
ISSN: 1861-1125 (print version)
ISSN: 1861-1133 (electronic version)
Journal no. 11440
