Preface and Introduction vii

1 Introduction: Applications and Issues 1
  1.0 Outline of Chapter .......................... 1
  1.1 The Robbins–Monro Algorithm ................ 3
    1.1.1 Introduction ............................ 3
    1.1.2 Finding the Zeros of an Unknown Function ..... 5
    1.1.3 Best Linear Least Squares Fit ............... 8
    1.1.4 Minimization by Recursive Monte Carlo ....... 12
  1.2 The Kiefer–Wolfowitz Procedure ............... 14
    1.2.1 The Basic Procedure ..................... 14
    1.2.2 Random Directions ....................... 17
  1.3 Extensions of the Algorithms .................... 19
    1.3.1 A Variance Reduction Method .............. 19
    1.3.2 Constraints .............................. 21
    1.3.3 Averaging of the Iterates: “Polyak Averaging” . 22
    1.3.4 Averaging the Observations ............... 22
    1.3.5 Robust Algorithms .......................... 23
    1.3.6 Nonexistence of the Derivative at Some $\theta$ .... 24
    1.3.7 Convex Optimization and Subgradients. ....... 25
  1.4 A Lagrangian Algorithm for Constrained
    Function Minimization .......................... 26
2 Applications
2.0 Outline of Chapter .......................... 29
2.1 An Animal Learning Model .................. 31
2.2 A Neural Network .......................... 34
2.3 State-Dependent Noise ..................... 37
2.4 Learning Optimal Controls ................... 40
  2.4.1 Q-Learning ............................ 41
2.4.2 Approximating a Value Function ........... 44
2.4.3 Parametric Optimization of a Markov Chain
    Control Problem .......................... 48
2.5 Optimization of a GI/G/1 Queue ............... 51
  2.5.1 Derivative Estimation and Infinitesimal Perturbation
    Analysis: A Brief Review ........................ 52
2.5.2 The Derivative Estimate for the
    Queueing Problem .......................... 54
2.6 Passive Stochastic Approximation ............. 58
2.7 Learning in Repeated Stochastic Games ....... 59

3 Signal Processing, Communications, and Control 63
3.0 Outline of Chapter .......................... 63
3.1 Parameter Identification and Tracking ........ 64
  3.1.1 The Classical Model .................... 64
3.1.2 ARMA and ARMAX Models .................. 68
3.2 Tracking Time Varying Systems ............... 69
  3.2.1 The Algorithm .......................... 69
3.2.2 Some Data ............................. 73
3.3 Feedback and Averaging ...................... 75
3.4 Applications in Communications Theory ....... 76
  3.4.1 Adaptive Noise Cancellation and
    Disturbance Rejection ..................... 77
3.4.2 Adaptive Equalizers ..................... 79
3.4.3 An ARMA Model, with a Training Sequence ... 80
3.5 Adaptive Antennas and Mobile Communications .... 83
3.6 Proportional Fair Sharing ................... 88

4 Mathematical Background 95
4.0 Outline of Chapter .......................... 95
4.1 Martingales and Inequalities ................ 96
4.2 Ordinary Differential Equations ............... 101
  4.2.1 Limits of a Sequence of Continuous Functions
    .......................... 101
4.2.2 Stability of Ordinary Differential Equations .... 104
4.3 Projected ODE .............................. 106
4.4 Cooperative Systems and Chain Recurrence .... 110
  4.4.1 Cooperative Systems ..................... 110
4.4.2 Chain Recurrence ....................... 110
5 Convergence w.p.1: Martingale Difference Noise
5.0 Outline of Chapter .................................. 117
5.1 Truncated Algorithms: Introduction ............. 119
5.2 The ODE Method .................................. 125
  5.2.1 Assumptions and the Main
       Convergence Theorem .......................... 125
  5.2.2 Convergence to Chain Recurrent Points ...... 134
5.3 A General Compactness Method ................... 137
  5.3.1 The Basic Convergence Theorem ............... 137
  5.3.2 Sufficient Conditions for the Rate of
       Change Condition ............................. 139
  5.3.3 The Kiefer–Wolfowitz Algorithm ............. 142
5.4 Stability and Combined Stability–ODE Methods ... 144
  5.4.1 A Liapunov Function Method for Convergence 145
  5.4.2 Combined Stability–ODE Methods .......... 146
5.5 Soft Constraints .................................. 150
5.6 Random Directions, Subgradients, and
       Differential Inclusions ........................ 151
5.7 Animal Learning and Pattern Classification ....... 154
  5.7.1 The Animal Learning Problem ............... 154
  5.7.2 The Pattern Classification Problem .......... 156
5.8 Non-Convergence to Unstable Points ............. 157

6 Convergence w.p.1: Correlated Noise
6.0 Outline of Chapter ................................ 161
6.1 A General Compactness Method .................... 162
  6.1.1 Introduction and General Assumptions ....... 162
  6.1.2 The Basic Convergence Theorem ............... 166
  6.1.3 Local Convergence Results ................... 169
6.2 Sufficient Conditions ................................ 170
6.3 Perturbed State Criteria ........................... 172
  6.3.1 Perturbed Iterates ............................ 172
  6.3.2 General Conditions for the Asymptotic
       Rate of Change ................................ 175
  6.3.3 Alternative Perturbations .................... 177
6.4 Examples of State Perturbation .................... 180
6.5 Kiefer–Wolfowitz Algorithms ...................... 183
6.6 State-Dependent Noise ............................ 185
6.7 Stability-ODE Methods ............................ 189
6.8 Differential Inclusions ............................ 195
6.9 Bounds on Escape Probabilities ................... 197
6.10 Large Deviations ................................. 201
  6.10.1 Two-Sided Estimates ........................ 202

12 Decentralized Algorithms 395

- 12.0 Outline of Chapter .................................. 395
- 12.1 Examples ............................................. 397
  - 12.1.1 Introductory Comments .......................... 397
  - 12.1.2 Pipelined Computations ......................... 398
  - 12.1.3 A Distributed and Decentralized
    Network Model ........................................ 400
  - 12.1.4 Multiaccess Communications ..................... 402
- 12.2 Real-Time Scale: Introduction ....................... 403
- 12.3 The Basic Algorithms ................................ 408
  - 12.3.1 Constant Step Size: Introduction ............... 408
  - 12.3.2 Martingale Difference Noise .................... 410
  - 12.3.3 Correlated Noise ................................ 417
  - 12.3.4 Analysis for $\epsilon \to 0$ and $T \to \infty$ ............ 419
- 12.4 Decreasing Step Size ................................ 421
- 12.5 State-Dependent Noise ................................ 428
- 12.6 Rate of Convergence ................................ 430
- 12.7 Stability and Tightness of the Normalized Iterates .... 436
  - 12.7.1 Unconstrained Algorithms ....................... 436
- 12.8 Convergence for Q-Learning: Discounted Cost ........ 439
