Contents

Preface ................................................................. v
Contributors ....................................................... ix

1 Long-Term Selection Experiments: Epistasis and the Response to Selection ............................. 1
   Charles Goodnight

2 Finding the Epistasis Needles in the Genome-Wide Haystack ..................................................... 19
   Marylyn D. Ritchie

3 Biological Knowledge-Driven Analysis of Epistasis in Human GWAS with Application to Lipid Traits .......................................................... 35
   Li Ma, Alon Keinan, and Andrew G. Clark

4 Epistasis for Quantitative Traits in Drosophila ................................................................................. 47
   Trudy E.C. Mackay

5 Epistasis in the Risk of Human Neuropsychiatric Disease .............................................................. 71
   Scott M. Williams

6 On the Partitioning of Genetic Variance with Epistasis .................................................................... 95
   José M. Álvarez-Castro and Arnaud Le Rouzic

7 Measuring Gene Interactions ............................................................................................................. 115
   Thomas F. Hansen

8 Two Rules for the Detection and Quantification of Epistasis and Other Interaction Effects .................. 145
   Günter P. Wagner

9 Direct Approach to Modeling Epistasis .............................................................................................. 159
   Rong-Cai Yang

10 Capacitating Epistasis—Detection and Role in the Genetic Architecture of Complex Traits ............ 185
    Mats E. Pettersson and Örjan Carlborg

11 Compositional Epistasis: An Epidemiologic Perspective ................................................................. 197
    Etsuji Suzuki and Tyler J. VanderWeele

12 Identification of Genome-Wide SNP–SNP and SNP–Clinical Boolean Interactions in Age-Related Macular Degeneration ............................................. 217
    Carlos Riveros, Renato Vimieiro, Elizabeth G. Holliday, Christopher Oldmeadow, Jie Jin Wang, Paul Mitchell, John Attia, Rodney J. Scott, and Pablo A. Moscato

13 Epistasis Analysis Using Information Theory .................................................................................. 257
    Jason H. Moore and Ting Hu

14 Genome-Wide Epistasis and Pleiotropy Characterized by the Bipartite Human Phenotype Network .... 269
    Christian Darabos and Jason H. Moore
