# Contents

*Preface* ................................................................. v

*Contributors* .......................................................... xi

1 UPS Activation in the Battle Against Aging and Aggregation-Related Diseases: An Extended Review ................................................................. 1
   *Nikoletta Papaevgeniou and Niki Chondrogianni*

2 Review and Literature Mining on Proteostasis Factors and Cancer ......................... 71
   *Ana Sofia Carvalho, Manuel S. Rodríguez, and Rune Matthiesen*

3 Combining Zebrafish and Mouse Models to Test the Function of Deubiquitinating Enzyme (Dubs) Genes in Development: Role of USP45 in the Retina ................................................................. 85
   *Vasileios Toulis, Alejandro Garanto, and Gemma Marfany*

4 Immunodepletion and Immunopurification as Approaches for CSN Research ................. 103
   *Amnon Golan, Ning Wei, and Elah Pick*

5 Studying Protein Ubiquitylation in Yeast ................................................................. 117
   *Junie Hovsepian, Michel Becuwe, Oded Kleifeld, Michael H. Glickman, and Sébastien Léon*

6 Strategies to Detect Endogenous Ubiquitination of a Target Mammalian Protein ................. 143
   *Sara Sigismund and Simona Polo*

7 In Vitro Ubiquitination: Self-Ubiquitination, Chain Formation, and Substrate Ubiquitination Assays ................................................................. 153
   *Elena Maspero and Simona Polo*

8 Isolation of the Ubiquitin-Proteome from Tumor Cell Lines and Primary Cells Using TUBEs ........................................................................ 161
   *Wendy Xolalpa, Lydia Mata-Cantero, Fabienne Aillet, and Manuel S. Rodríguez*

9 TUBEs-Mass Spectrometry for Identification and Analysis of the Ubiquitin-Proteome ........................................................................ 177
   *Mikel Azkargorta, Iraide Escobes, Felix Elortza, Rune Matthiesen, and Manuel S. Rodríguez*

10 Isolation of Ubiquitinated Proteins to High Purity from In Vivo Samples ........................ 193
   *Juanma Ramírez, Mingwei Min, Rosa Barrio, Catherine Lindon, and Ugo Mayor*

11 Method for the Purification of Endogenous Unanchored Polyubiquitin Chains ................. 203
12 Fluorescent Tools for In Vivo Studies on the Ubiquitin-Proteasome System ................................................. 215
   Olli Matilainen, Sweta Jha, and Carina I. Holmberg

13 Bimolecular Fluorescence Complementation to Assay the Interactions of Ubiquitylation Enzymes in Living Yeast Cells .................................................. 223
   Ewa Błaszczał, Claude Prigent, and Gwenaël Rabut

14 Monitoring Ubiquitin-Coated Bacteria via Confocal Microscopy ......................................................... 243
   Marie Lork, Micke Delvaeye, Amanda Gonçalves, Evelien Van Hamme, and Rudi Beyaert

15 Detection and Analysis of Cell Cycle-Associated APC/C-Mediated Cellular Ubiquitylation In Vitro and In Vivo ................................................ 251
   Cesyen Cedeño, Esther La Monaca, Mara Esposito, and Gustavo J. Gutierrez

16 Detection and Analysis of SUMOylation Substrates In Vitro and In Vivo .............................................. 267
   Cesyen Cedeño, Esther La Monaca, Mara Esposito, and Gustavo J. Gutierrez

17 Detection of Protein–Protein Interactions and Posttranslational Modifications Using the Proximity Ligation Assay:
   Application to the Study of the SUMO Pathway .................................................................................... 279
   Marko Ristic, Frédérique Brockly, Marc Piechaczyk, and Guillaume Bossis

18 Dissecting SUMO Dynamics by Mass Spectrometry .................................................................................. 291
   Krzysztof Drabikowski and Michał Dadlez

19 Isolation of Lysosomes from Mammalian Tissues and Cultured Cells ..................................................... 299
   Carmen Aguado, Eva Pérez-Jiménez, Marcos Labuerta, and Erwin Knecht

20 Analysis of Relevant Parameters for Autophagic Flux
   Using HeLa Cells Expressing EGFP-LC3 ......................................................................................... 313
   Sandra Muñoz-Braceras and Ricardo Escalante

21 Analysis of Protein Oligomeric Species by Sucrose Gradients ................................................................. 331
   Sandra Tenreiro, Diana Macedo, Zrinka Marijanovic, and Tiago Fleming Outeiro

22 Analysis of Protein Oligomerization by Electrophoresis .......................................................................... 341
   Monica Cubillos-Rojas, Taiane Schneider, Susana Sánchez-Tena, Ramon Bartrons, Francesc Ventura, and Jose Luis Rosa

23 Blot-MS of Carbonylated Proteins: A Tool to Identify Oxidized Proteins .................................................. 349
   Rita Ferreira, Pedro Domingues, Francisco Amado, and Rui Vitorino

24 Quantitation of Protein Translation Rate In Vivo with Bioorthogonal Click-Chemistry .......................... 369
   Borja Belda-Palazón, Alejandro Ferrando, and Rosa Farràs

25 A Simple Protocol for High Efficiency Protein Isolation After RNA Isolation from Mouse Thyroid and Other Very Small Tissue Samples ........................................ 383
   Panos G. Ziros, Dionysios V. Charitoumpakos, and Gerasimos P. Sykiotis

26 Monitoring Target Engagement of Deubiquitylating Enzymes Using Activity Probes: Past, Present, and Future ................................................................. 395
   Jeanine Harrigan and Xavier Jacq
