Contents

Preface ................................................................. v
Contributors .............................................................. xi

PART I QUANTUM MECHANICS CALCULATIONS

1 Ab Initio, Density Functional Theory, and Semi-Empirical Calculations ................. 3
   Mikael P. Johansson, Ville R.I. Kaila, and Dage Sundholm
2 Ab Initio Molecular Dynamics ............................................ 29
   Kari Laasonen
3 Introduction to QM/MM Simulations .................................... 43
   Gerrit Groenhof
4 Computational Enzymology ............................................. 67
   Alessio Lodola and Adrian J. Mulholland
5 QM and QM/MM Simulations of Proteins ................................. 91
   Thomas Steinbrecher and Marcus Elstner

PART II CLASSICAL MECHANICS: ATOMISTIC SIMULATIONS

6 Classical Molecular Dynamics in a Nutshell ........................................... 127
   Susanna Hug
7 Enhanced Sampling Algorithms ............................................. 153
   Ayori Mitsutake, Yoshitaka Mori, and Yuko Okamoto
8 Force Fields for Classical Molecular Dynamics ............................. 197
   Luca Monticelli and D. Peter Tieleman
9 Polarizable Force Fields ................................................ 215
   Hanne S. Antila and Emppu Salonen
10 Electrostatics Interactions in Classical Simulations ............................. 243
    G. Andrés Cisneros, Volodymyr Babin, and Celeste Sagui
11 An Introduction to Best Practices in Free Energy Calculations ................. 271
    Michael R. Shirts and David L. Mobley
12 Recipes for Free Energy Calculations in Biomolecular Systems ................. 313
    Mahmoud Moradi, Volodymyr Babin, Celeste Sagui, and Christopher Roland
13 Molecular Docking Methodologies ........................................ 339
    Andrea Bortolato, Marco Fanton, Jonathan S. Mason, and Stefano Moro
14 Simulation Studies of the Mechanism of Membrane Transporters ............... 361
    Giray Enkavi, Jing Li, Paween Mabinthibchaichan, Po-Chao Wen, Zhijian Huang, Saber A. Shaikh, and Emad Tajkhorsheid
15 Molecular Dynamics Simulations of Lipid Bilayers: Simple Recipe of How to Do It .................................................. 407
    Hector Martinez-Seara and Tomasz Róg
16 Simulations of Lipid Monolayers. ................................................. 431
    Svetlana Baoukina and D. Peter Tieleman
17 Simulating DNA by Molecular Dynamics: Aims, Methods, and Validation . . . 445
    Nicolas Foloppe, Marc Guérout, and Brigitte Hartmann
18 Simulation of Carbohydrates, from Molecular Docking to Dynamics in Water . . . 469
    Nicolas Sapay, Alessandra Nurisso, and Anne Imberty

PART III    MESOSCOPIC SIMULATIONS AND COARSE-GRAINED MODELS

19 Systematic Methods for Structurally Consistent Coarse-Grained Models .......... 487
    W.G. Noid
20 The Martini Coarse-Grained Force Field ........................................ 533
    Xavier Periole and Siewert-Jan Marrink
21 Multiscale Molecular Modeling ................................................. 567
    Matej Praprotnik and Luigi Delle Site
22 Coarse-Grained Models for Protein Folding and Aggregation .................... 585
    Philippe Derreumaux
23 Elastic Network Models: Theoretical and Empirical Foundations ..................... 601
    Yves-Henri Sanejouand
24 An Introduction to Dissipative Particle Dynamics .................................. 617
    Zhong-Yuan Lu and Yong-Lei Wang
25 Multiscale Molecular Dynamics Simulations of Membrane Proteins ............... 635
    Syma Khalid and Peter J. Bond
26 Vesicles and Vesicle Fusion: Coarse-Grained Simulations ........................ 659
    Julian C. Shillcock

Index ................................................................................. 699
Biomolecular Simulations
Methods and Protocols
Monticelli, L.; Salonen, E. (Eds.)
2013, XIII, 702 p. 61 illus., 41 illus. in color., Hardcover
