Contents

Preface .......................................................... v
Contributors ....................................................... xi

PART I  STRESS AND IMMUNITY: BIOPSYCHOSOCIAL MODELS

1 The Role of Psychoneuroimmunology in Personalized and Systems Medicine ........................................ 3
   Qing Yan

2 Psychoneuroimmunology: The Experiential Dimension .......................................................... 21
   Elling Ulvestad

3 Psychosocial Job Stress and Immunity: A Systematic Review ...................................................... 39
   Akinori Nakata

4 Immune Cells Listen to What Stress Is Saying: Neuroendocrine Receptors Orchestrate Immune Function ........ 77
   Harlan P. Jones

5 Physical Activity, Stress Reduction, and Mood: Insight into Immunological Mechanisms ....................... 89
   Mark Hamer, Romano Endrighi, and Lydia Poole

PART II  TRANSLATION OF PSYCHONEUROIMMUNOLOGY INTO PERSONALIZED MEDICINE: POTENTIAL BIOMARKERS AND CLINICAL IMPLICATIONS

6 Translational Implications of Inflammatory Biomarkers and Cytokine Networks in Psychoneuroimmunology ........ 105
   Qing Yan

7 Cytokines as Potential Biomarkers for Parkinson’s Disease: A Multiplex Approach ............................... 121
   Darcy Litteljohn and Shawn Hayley

8 Exploring the Diagnostic Potential of Immune Biomarker Coexpression in Gulf War Illness ..................... 145
   Gordon Broderick, Mary Ann Fletcher, Michael Gallagher, Zachary Barnes, Suzanne D. Vernon, and Nancy G. Klimas

9 Neuroimmune Mechanisms of Depression in Heart Failure ......................................................... 165
   Jessica A. Jiménez and Paul J. Mills

10 A Reinterpretation of the Pathogenesis and Cure of Cancer According to the Psychoneuroimmunological Discoveries ......................................................... 183
    Paolo Lissoni
11 Aging Microglia: Relevance to Cognition and Neural Plasticity ................. 193
   Rachel A. Kohman

12 Autism Spectrum Disorders: From Immunity to Behavior ...................... 219
   Milo Careaga and Paul Ashwood

PART III TECHNOLOGIES AND MODELS IN PSYCHONEUROIMMUNOLOGY STUDIES

13 Mouse Testing Methods in Psychoneuroimmunology: 
   An Overview of How to Measure Sickness, Depressive/Anxiety, 
   Cognitive, and Physical Activity Behaviors ........................................ 243
   Jason M. York, Neil A. Blevins, Tracy Baynard, 
   and Gregory G. Freund

14 The MRL Model: An Invaluable Tool in Studies 
   of Autoimmunity–Brain Interactions .................................................... 277
   Boris Sakić

15 Interleukin-2 and the Brain: Dissecting Central Versus 
   Peripheral Contributions Using Unique Mouse Models ......................... 301
   John M. Petitto, Danielle Meola, and Zhi Huang

16 Psychoneuroimmunology and Natural Killer Cells: 
   The Chromium Release Whole Blood Assay ........................................ 313
   Mary Ann Fletcher, Zachary Barnes, Gordon Broderick, 
   and Nancy G. Klimas

17 The Application of PET Imaging in Psychoneuroimmunology Research ...... 325
   Jonas Hannestad

18 The Vaccination Model in Psychoneuroimmunology Research: 
   A Review ......................................................................................... 355
   Anna C. Phillips

19 Using Vaccinations to Assess In Vivo Immune Function 
   in Psychoneuroimmunology ............................................................. 371
   Victoria E. Burns

20 Translational Bioinformatics in Psychoneuroimmunology: 
   Methods and Applications ............................................................... 383
   Qing Yan

Index .................................................................................................. 401
Psychoneuroimmunology
Methods and Protocols
Yan, Q. (Ed.)
2012, XII, 405 p. 27 illus., 14 illus. in color., Hardcover
ISBN: 978-1-62703-070-0
A product of Humana Press
