Contents

Preface ................................................................. v
Contributors ......................................................... ix

PART I  INTRODUCTION AND OVERVIEW

1 Protein–Ligand Interactions: Fundamentals .............................. 3
   Mark A. Williams
2 Protein Sample Characterization ........................................ 35
   Tina Daviter and Rémi Fronzes
3 Measurement of Protein–Ligand Complex Formation ............... 63
   Peter N. Lowe, Cara K. Vaughan, and Tina Daviter

PART II  QUANTITATION OF THERMODYNAMICS AND KINETICS

4 Isothermal Titration Calorimetry for Studying
   Protein–Ligand Interactions ........................................ 103
   Luminita Damian
5 Rapid Mixing Kinetic Techniques .................................... 119
   Stephen R. Martin and Maria J. Schilstra
6 Protein–Ligand Interactions Using SPR Systems .................... 139
   Åsa Frostell, Lena Vinterbäck, and Hans Sjöbom

PART III  SPECTROSCOPIC METHODS

7 Fluorescence Techniques in Analysis of Protein–Ligand Interactions . . . 169
   Gabor Mocz and Justin A. Ross
8 Circular and Linear Dichroism Spectroscopy for the Study
   of Protein–Ligand Interactions .................................... 211
   Tina Daviter, Nikola Chmel, and Alison Rodger
9 Analyzing Protein–Ligand Interactions by Dynamic
   NMR Spectroscopy ............................................. 243
   Anthony Mittermaier and Erick Meneses
10 Studying Metal Ion–Protein Interactions: Electronic Absorption,
    Circular Dichroism, and Electron Paramagnetic Resonance ............ 267
    Liliana Quintanar and Lina Rivillas-Acevedo
11 Monitoring Protein–Ligand Interactions by Time-Resolved
    FTIR Difference Spectroscopy .................................. 299
    Carsten Kötting and Klaus Gerwert
Protein–Ligand Interactions
Methods and Applications
Williams, M.; Daviter, T. (Eds.)
2013, X, 530 p. 146 illus., 45 illus. in color., Hardcover
ISBN: 978-1-62703-397-8
