

Contents

1	Introduction	1
1.1	Scope and Current Research Areas	1
1.1.1	Spatial Distribution of Settlements and Population Estimates Based on Archaeological Remains	1
1.1.2	Testing the Hypothesis of a Neolithic Demographic Transition	3
1.1.3	The Sociodemographic Approach Based on Bone Remains	3
1.2	Major Milestones in Palaeodemographic Research	4
1.2.1	First Attempts	4
1.2.2	Fascination for Palaeodemography	5
1.2.3	The French School and Research in the French-Speaking World Since 1992	7
1.2.4	Research Outside the French-Speaking World Since 1992	8

Part I The Data of Interest

2	Epistemology of the Discipline	13
2.1	Representativeness of the Anthropological Sample	13
2.1.1	Biological Archives: Contribution and Limitations	13
2.1.2	From the World of the Dead to the World of the Living: The Question of Representativeness	14
2.1.3	Problems with Small Samples	18
2.1.4	The Migration Question	18
2.1.5	Is It Futile to Study the Demography of Archaeological Populations?	19

- 2.2 Ideas About Age 20
 - 2.2.1 Age, a Word with Many Meanings 20
 - 2.2.2 Civil Age, Biological Age and Social Age:
An individual’s Place in Society 21
 - 2.2.3 Towards Socially Significant Age Groups 22
- 2.3 Considerations Concerning Reference Populations 23
 - 2.3.1 The Hypothesis of Biological Uniformity 23
 - 2.3.2 Towards a Pre-industrial Biological Standard? 25
 - 2.3.3 Influence of the Sex and Age Structure
of the Reference Population 25
 - 2.3.4 Choice of Reference Population Structure 28
 - 2.3.5 Other Insidious Biases in Current
Reference Collections 29
 - 2.3.6 Towards an Ideal Comparison Collection 30
- 3 The Osteological Data 31**
 - 3.1 Identifying Sex 32
 - 3.1.1 Adults 32
 - 3.1.2 Juveniles 33
 - 3.2 Estimating Age 33
 - 3.2.1 Juveniles 34
 - 3.2.2 Adults 39
 - 3.3 Problems with the Methods for Determining
Age and Sex 45
- 4 Establishing a Reference Population 53**
 - 4.1 Establishing a New Reference Population for Adults 54
 - 4.1.1 Claude Masset’s Reference Collection 54
 - 4.1.2 Adjusting the Reference Population 63
 - 4.1.3 The P_{Lisbon1889} Reference Population 70
 - 4.2 Establishing a Reference Population for Juveniles 73
 - 4.2.1 Tooth Emergence and Mineralisation 74
 - 4.2.2 Establishing a New Comparison Collection 75
 - 4.2.3 Number of Mineralisation Coefficients 75
 - 4.2.4 Possible Variability in Tooth Development 75
 - 4.2.5 Selection of Teeth for Model Construction 77
 - 4.2.6 Adapting the Reference Population 77
 - 4.3 Age Groups as Yet Inaccessible 80
 - 4.3.1 Estimating Age at Death for Infants 80
 - 4.3.2 Estimating Age at Death for Adolescents
and Young Adults 80

Part II Reconstructing Demographic Parameters

5	Age at Death: Current Approaches and Methods	85
5.1	General Methodological Principles	85
5.2	Estimation by the “Probability Vector” Method	86
5.2.1	Outline of the “Probability Vector” Method	86
5.2.2	A New Age Estimation for a Set of Buried Adults	87
5.2.3	Estimating Age at Death of a Sample of Buried Immature Subjects	87
5.2.4	Adaptations to Particular Contexts	94
5.3	“Estimator” Method	95
5.3.1	Outline of the “Estimator” Method	95
5.3.2	“Revised Estimators”	96
5.3.3	Brainstorming	98
6	Current Demographic Models	99
6.1	Review of Basic Hypotheses in Palaeodemography	99
6.2	Population Models	100
6.2.1	The Stable Population Concept in Palaeodemography	100
6.2.2	Semi-stable and Quasi-stable Populations	101
6.2.3	Migration	102
6.3	Various Mortality Regimes	103
6.3.1	Model Life Tables	103
6.3.2	Main Life Tables Used by Demographers	104
6.3.3	Main Mortality Models Used by Palaeodemographers	106
6.4	Should Population Dynamics Be Modelled by Fertility or by Mortality?	111
7	Finding the Right Models for Pre-industrial Populations	113
7.1	Constraints To Be Included in the Models	114
7.1.1	A Mortality Pattern Specific to Pre-industrial Populations	114
7.1.2	Models Constructed from Inputs Accessible to Palaeodemographers	114
7.1.3	Margin of Error and Palaeodemographic Sample Size: Two Variables to Consider	116
7.1.4	Growth Rate Is Difficult to Measure, but Cannot Be Ignored	116
7.2	Modelling	117
7.2.1	Collecting the Sample of Observed Tables	117
7.2.2	Choice of Mathematical Model	118
7.2.3	Choice of Entry Parameters	119
7.2.4	Including the Population Growth Rate	119
7.2.5	Quality and Presentation of the Models	120

8	Model Tables for Pre-industrial Populations	123
8.1	Logarithmic Model	123
8.1.1	Preliminary Hypotheses for the Multiple Linear Regression	124
8.1.2	Preliminary Hypotheses for the Simple Linear Regression	124
8.1.3	Quality of Proposed Regressions	125
8.2	Estimating of Probabilities from Palaeodemographic Variables	126
8.2.1	Juvenility Index (J) and Indicator P	126
8.2.2	Mean age of Deceased Children Aged 5 to 14: a_{5-14} (Both Sexes)	127
8.2.3	Mean Adult Age at Death (a_{20})	130
8.3	Regressions from Probabilities of Dying	131
8.3.1	Regressions from the Preceding Probability	131
8.3.2	Regressions from the Following Probability	132
8.4	Multi-input Models	135
8.5	Models with Migration	138
8.5.1	Models for Emigration of Young Adults of Both Sexes	139
8.5.2	Models for Immigration of Mature Men	139
8.6	Conclusions and Recommendations	139
9	Definition and Exploration of a Pre-industrial Standard	143
9.1	The Brass Method	144
9.2	Necessary Adaptations for Palaeodemographic Data	145
9.3	Pre-industrial Standard	146
9.3.1	Characteristics	146
9.3.2	Differential Mortality	146
9.4	Establishing Model Tables with the Brass Method	151
9.4.1	Construction Method	152
9.4.2	Panels of Proposed Life Tables (Both Sexes Combined)	156
9.4.3	Atypical Life Tables	159
9.5	Conclusions	161

Part III Developing a Study Protocol

10	Final Overview	165
10.1	Assessing the Usefulness of the Study	165
10.2	Sample Representativeness	166
10.2.1	Importance of Sample Size	166
10.2.2	Population Structure	167

- 10.3 Basic Anthropological Data: A Pragmatic Choice of Methods 168
 - 10.3.1 Determining Sex 168
 - 10.3.2 Estimating the Age at Death of a Skeleton 168
- 10.4 Estimating Age at Death for a Buried Population 170
 - 10.4.1 Why Shift from Individual Ages to Collective Age? 170
 - 10.4.2 Maintaining a Probabilistic Approach to Age 171
 - 10.4.3 Use of a Pre-industrial Reference Standard 171
- 10.5 New Palaeodemographic Tools 171
 - 10.5.1 The Revised “PFP” Method (Probability Vectors) 172
 - 10.5.2 New Life Tables for Palaeodemographers 172
- 11 Examples of Archaeological Applications 177**
 - 11.1 Sites for Which Only Biological Sources Are Available 178
 - 11.1.1 Frénouville Rural Cemetery (Calvados, N.W. France, Fourth Century AD Sector) 178
 - 11.1.2 Lisieux Urban Cemetery (Calvados, N.W. France, Fourth Century AD Sector) 190
 - 11.2 Examples from Sites for Which Biological and Statistical Sources Are Available 198
 - 11.2.1 Monastic Cemetery at Maubuisson, Val d’Oise (Paris Region) (Seventeenth and Eighteenth Century Convent Population) 199
 - 11.2.2 The Urban Cemetery of Antibes, Alpes-Maritimes (Small Port and Garrison Town, End Nineteenth Century) 204

Part IV Further Analysis

- 12 Critique of Current Methods 217**
 - 12.1 Tables of Minimum Distance Between Each Cell 218
 - 12.1.1 Historical Background 218
 - 12.1.2 Table Subject to Constraints 219
 - 12.1.3 Table Subject to Constraints and Coming as Close as Possible to an Initial Table 220
 - 12.1.4 Critique 226
 - 12.2 Tables of Minimum Distance Between Each Column 226
 - 12.2.1 Historical Background 227
 - 12.2.2 Maximum Likelihood Estimator 233
 - 12.2.3 Approximation Method 235
 - 12.2.4 Summary of the Two Methods 237
 - 12.2.5 Critique 246
 - 12.3 Conclusions 253

- 13 A New Method for Estimating Age-at-Death Structure** 255
 - 13.1 Introduction 255
 - 13.2 A Bayesian Estimation Method 256
 - 13.2.1 Model and Principle 256
 - 13.2.2 Use in Practice 259
 - 13.3 Brief Simulation Study 263
 - 13.4 Examples of Archaeological Application 274
 - 13.5 Conclusion 284

- Authors and Contributors** 287

- Bibliography** 289
