

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	Scope and Current Research Areas . . . . .	1
1.1.1	Spatial Distribution of Settlements and Population Estimates Based on Archaeological Remains . . . . .	1
1.1.2	Testing the Hypothesis of a Neolithic Demographic Transition . . . . .	3
1.1.3	The Sociodemographic Approach Based on Bone Remains . . . . .	3
1.2	Major Milestones in Palaeodemographic Research . . . . .	4
1.2.1	First Attempts . . . . .	4
1.2.2	Fascination for Palaeodemography . . . . .	5
1.2.3	The French School and Research in the French-Speaking World Since 1992 . . . . .	7
1.2.4	Research Outside the French-Speaking World Since 1992 . . . . .	8

## Part I The Data of Interest

<b>2</b>	<b>Epistemology of the Discipline</b> . . . . .	13
2.1	Representativeness of the Anthropological Sample . . . . .	13
2.1.1	Biological Archives: Contribution and Limitations . . . . .	13
2.1.2	From the World of the Dead to the World of the Living: The Question of Representativeness . . . . .	14
2.1.3	Problems with Small Samples . . . . .	18
2.1.4	The Migration Question . . . . .	18
2.1.5	Is It Futile to Study the Demography of Archaeological Populations? . . . . .	19

- 2.2 Ideas About Age . . . . . 20
  - 2.2.1 Age, a Word with Many Meanings . . . . . 20
  - 2.2.2 Civil Age, Biological Age and Social Age:  
An individual’s Place in Society . . . . . 21
  - 2.2.3 Towards Socially Significant Age Groups . . . . . 22
- 2.3 Considerations Concerning Reference Populations . . . . . 23
  - 2.3.1 The Hypothesis of Biological Uniformity . . . . . 23
  - 2.3.2 Towards a Pre-industrial Biological Standard? . . . . . 25
  - 2.3.3 Influence of the Sex and Age Structure  
of the Reference Population . . . . . 25
  - 2.3.4 Choice of Reference Population Structure . . . . . 28
  - 2.3.5 Other Insidious Biases in Current  
Reference Collections . . . . . 29
  - 2.3.6 Towards an Ideal Comparison Collection . . . . . 30
- 3 The Osteological Data . . . . . 31**
  - 3.1 Identifying Sex . . . . . 32
    - 3.1.1 Adults . . . . . 32
    - 3.1.2 Juveniles . . . . . 33
  - 3.2 Estimating Age . . . . . 33
    - 3.2.1 Juveniles . . . . . 34
    - 3.2.2 Adults . . . . . 39
  - 3.3 Problems with the Methods for Determining  
Age and Sex . . . . . 45
- 4 Establishing a Reference Population . . . . . 53**
  - 4.1 Establishing a New Reference Population for Adults . . . . . 54
    - 4.1.1 Claude Masset’s Reference Collection . . . . . 54
    - 4.1.2 Adjusting the Reference Population . . . . . 63
    - 4.1.3 The P<sub>Lisbon1889</sub> Reference Population . . . . . 70
  - 4.2 Establishing a Reference Population for Juveniles . . . . . 73
    - 4.2.1 Tooth Emergence and Mineralisation . . . . . 74
    - 4.2.2 Establishing a New Comparison Collection . . . . . 75
    - 4.2.3 Number of Mineralisation Coefficients . . . . . 75
    - 4.2.4 Possible Variability in Tooth Development . . . . . 75
    - 4.2.5 Selection of Teeth for Model Construction . . . . . 77
    - 4.2.6 Adapting the Reference Population . . . . . 77
  - 4.3 Age Groups as Yet Inaccessible . . . . . 80
    - 4.3.1 Estimating Age at Death for Infants . . . . . 80
    - 4.3.2 Estimating Age at Death for Adolescents  
and Young Adults . . . . . 80

**Part II Reconstructing Demographic Parameters**

**5 Age at Death: Current Approaches and Methods** . . . . . 85

5.1 General Methodological Principles . . . . . 85

5.2 Estimation by the “Probability Vector” Method . . . . . 86

5.2.1 Outline of the “Probability Vector” Method . . . . . 86

5.2.2 A New Age Estimation for a Set of Buried Adults . . . . . 87

5.2.3 Estimating Age at Death of a Sample  
of Buried Immature Subjects . . . . . 87

5.2.4 Adaptations to Particular Contexts . . . . . 94

5.3 “Estimator” Method . . . . . 95

5.3.1 Outline of the “Estimator” Method . . . . . 95

5.3.2 “Revised Estimators” . . . . . 96

5.3.3 Brainstorming . . . . . 98

**6 Current Demographic Models** . . . . . 99

6.1 Review of Basic Hypotheses in Palaeodemography . . . . . 99

6.2 Population Models . . . . . 100

6.2.1 The Stable Population Concept in Palaeodemography . . . . . 100

6.2.2 Semi-stable and Quasi-stable Populations . . . . . 101

6.2.3 Migration . . . . . 102

6.3 Various Mortality Regimes . . . . . 103

6.3.1 Model Life Tables . . . . . 103

6.3.2 Main Life Tables Used by Demographers . . . . . 104

6.3.3 Main Mortality Models Used by Palaeodemographers . . . . . 106

6.4 Should Population Dynamics Be Modelled by  
Fertility or by Mortality? . . . . . 111

**7 Finding the Right Models for Pre-industrial Populations** . . . . . 113

7.1 Constraints To Be Included in the Models . . . . . 114

7.1.1 A Mortality Pattern Specific to Pre-industrial  
Populations . . . . . 114

7.1.2 Models Constructed from Inputs Accessible  
to Palaeodemographers . . . . . 114

7.1.3 Margin of Error and Palaeodemographic Sample Size:  
Two Variables to Consider . . . . . 116

7.1.4 Growth Rate Is Difficult to Measure,  
but Cannot Be Ignored . . . . . 116

7.2 Modelling . . . . . 117

7.2.1 Collecting the Sample of Observed Tables . . . . . 117

7.2.2 Choice of Mathematical Model . . . . . 118

7.2.3 Choice of Entry Parameters . . . . . 119

7.2.4 Including the Population Growth Rate . . . . . 119

7.2.5 Quality and Presentation of the Models . . . . . 120

<b>8</b>	<b>Model Tables for Pre-industrial Populations</b> . . . . .	123
8.1	Logarithmic Model . . . . .	123
8.1.1	Preliminary Hypotheses for the Multiple Linear Regression . . . . .	124
8.1.2	Preliminary Hypotheses for the Simple Linear Regression . . . . .	124
8.1.3	Quality of Proposed Regressions . . . . .	125
8.2	Estimating of Probabilities from Palaeodemographic Variables . . . . .	126
8.2.1	Juvenility Index ( $J$ ) and Indicator $P$ . . . . .	126
8.2.2	Mean age of Deceased Children Aged 5 to 14: $a_{5-14}$ (Both Sexes) . . . . .	127
8.2.3	Mean Adult Age at Death ( $a_{20}$ ) . . . . .	130
8.3	Regressions from Probabilities of Dying . . . . .	131
8.3.1	Regressions from the Preceding Probability . . . . .	131
8.3.2	Regressions from the Following Probability . . . . .	132
8.4	Multi-input Models . . . . .	135
8.5	Models with Migration . . . . .	138
8.5.1	Models for Emigration of Young Adults of Both Sexes . . . . .	139
8.5.2	Models for Immigration of Mature Men . . . . .	139
8.6	Conclusions and Recommendations . . . . .	139
<b>9</b>	<b>Definition and Exploration of a Pre-industrial Standard</b> . . . . .	143
9.1	The Brass Method . . . . .	144
9.2	Necessary Adaptations for Palaeodemographic Data . . . . .	145
9.3	Pre-industrial Standard . . . . .	146
9.3.1	Characteristics . . . . .	146
9.3.2	Differential Mortality . . . . .	146
9.4	Establishing Model Tables with the Brass Method . . . . .	151
9.4.1	Construction Method . . . . .	152
9.4.2	Panels of Proposed Life Tables (Both Sexes Combined) . . . . .	156
9.4.3	Atypical Life Tables . . . . .	159
9.5	Conclusions . . . . .	161

### Part III Developing a Study Protocol

<b>10</b>	<b>Final Overview</b> . . . . .	165
10.1	Assessing the Usefulness of the Study . . . . .	165
10.2	Sample Representativeness . . . . .	166
10.2.1	Importance of Sample Size . . . . .	166
10.2.2	Population Structure . . . . .	167

- 10.3 Basic Anthropological Data: A Pragmatic Choice of Methods . . . . . 168
  - 10.3.1 Determining Sex . . . . . 168
  - 10.3.2 Estimating the Age at Death of a Skeleton . . . . . 168
- 10.4 Estimating Age at Death for a Buried Population . . . . . 170
  - 10.4.1 Why Shift from Individual Ages to Collective Age? . . . . . 170
  - 10.4.2 Maintaining a Probabilistic Approach to Age . . . . . 171
  - 10.4.3 Use of a Pre-industrial Reference Standard . . . . . 171
- 10.5 New Palaeodemographic Tools . . . . . 171
  - 10.5.1 The Revised “PFP” Method (Probability Vectors) . . . . . 172
  - 10.5.2 New Life Tables for Palaeodemographers . . . . . 172
- 11 Examples of Archaeological Applications . . . . . 177**
  - 11.1 Sites for Which Only Biological Sources Are Available . . . . . 178
    - 11.1.1 Frénouville Rural Cemetery (Calvados, N.W. France, Fourth Century AD Sector) . . . . . 178
    - 11.1.2 Lisieux Urban Cemetery (Calvados, N.W. France, Fourth Century AD Sector) . . . . . 190
  - 11.2 Examples from Sites for Which Biological and Statistical Sources Are Available . . . . . 198
    - 11.2.1 Monastic Cemetery at Maubuisson, Val d’Oise (Paris Region) (Seventeenth and Eighteenth Century Convent Population) . . . . . 199
    - 11.2.2 The Urban Cemetery of Antibes, Alpes-Maritimes (Small Port and Garrison Town, End Nineteenth Century) . . . . . 204

**Part IV Further Analysis**

- 12 Critique of Current Methods . . . . . 217**
  - 12.1 Tables of Minimum Distance Between Each Cell . . . . . 218
    - 12.1.1 Historical Background . . . . . 218
    - 12.1.2 Table Subject to Constraints . . . . . 219
    - 12.1.3 Table Subject to Constraints and Coming as Close as Possible to an Initial Table . . . . . 220
    - 12.1.4 Critique . . . . . 226
  - 12.2 Tables of Minimum Distance Between Each Column . . . . . 226
    - 12.2.1 Historical Background . . . . . 227
    - 12.2.2 Maximum Likelihood Estimator . . . . . 233
    - 12.2.3 Approximation Method . . . . . 235
    - 12.2.4 Summary of the Two Methods . . . . . 237
    - 12.2.5 Critique . . . . . 246
  - 12.3 Conclusions . . . . . 253

- 13 A New Method for Estimating Age-at-Death Structure . . . . .** 255
  - 13.1 Introduction . . . . . 255
  - 13.2 A Bayesian Estimation Method . . . . . 256
    - 13.2.1 Model and Principle . . . . . 256
    - 13.2.2 Use in Practice . . . . . 259
  - 13.3 Brief Simulation Study . . . . . 263
  - 13.4 Examples of Archaeological Application . . . . . 274
  - 13.5 Conclusion . . . . . 284
  
- Authors and Contributors . . . . .** 287
  
- Bibliography . . . . .** 289
  
- Index . . . . .** 325
