Excel 2010 for Health Services Management Statistics: A Guide to Solving Practical Problems is intended for anyone looking to learn the basics of applying Excel’s powerful statistical tools to their health services management courses or work activities. If understanding statistics isn’t your strongest suit, you are not especially mathematically inclined, or if you are wary of computers, then this is the right book for you.

Here you’ll learn how to use key statistical tests using Excel without being overpowered by the underlying statistical theory. This book clearly and methodically shows and explains how to create and use these statistical tests to solve practical problems in health services management.

Excel is an easily available computer program for students, instructors, and managers. It is also an effective teaching and learning tool for quantitative analyses in health services management courses. The powerful numerical computational ability and the graphical functions available in Excel make learning statistics much easier than in years past. However, this is the first book to show Excel’s capabilities to more effectively teach health services management statistics; it also focuses exclusively on this topic in an effort to render the subject matter not only applicable and practical but also easy to comprehend and apply.

Unique features of this book:

- You will be told each step of the way, not only how to use Excel, but also why you are doing each step so that you can understand what you are doing, and not merely learn how to use statistical tests by rote.
- Includes specific objectives embedded in the text for each concept, so that you can know the purpose of the Excel steps.
- Includes 160 color screenshots so that you can be sure that you are performing the Excel steps correctly.
- This book is a tool that can be used either by itself or along with any good statistics book.
- Practical examples and problems are taken from health services management.
Statistical theory and formulas are explained in clear language without bogging you down in mathematical fine points.

You will learn both how to write statistical formulas using Excel and how to use Excel’s drop-down menus that will create the formulas for you.

This book does not come with a CD of Excel files which you can upload to your computer. Instead, you’ll be shown how to create each Excel file yourself. In a work situation, your colleagues will not give you an Excel file; you will be expected to create your own. This book will give you ample practice in developing this important skill.

Each chapter presents the steps needed to solve a practical health services management problem using Excel. In addition, there are three practice problems at the end of each chapter so that you can test your new knowledge of statistics. The answers to these problems appear in Appendix A.

A “Practice Test” is given in Appendix B to test your knowledge at the end of the book. The answers to these practical health services management problems appear in Appendix C.

This book is appropriate for use in any course in health services management statistics (at both undergraduate and graduate levels) as well as for managers who want to improve the usefulness of their Excel skills.

Dr. Tom Quirk, a current professor of marketing at the George Herbert Walker School of Business & Technology at Webster University in St. Louis, Missouri (USA), teaches marketing statistics, marketing research, and pricing strategies. At the beginning of his academic career, Prof. Quirk spent 6 years in educational research at the American Institutes for Research and Educational Testing Service. He then taught social psychology, educational psychology, and general psychology at Principia College in Elsah, Illinois (USA). He has published articles in *The Journal of Educational Psychology*, *Journal of Educational Research*, *Review of Educational Research*, *Journal of Educational Measurement*, *Educational Technology*, *The Elementary School Journal*, *Journal of Secondary Education*, *Educational Horizons*, and *Phi Delta Kappan*. In addition, professor Quirk has written more than 60 textbook supplements in management and marketing, published more than 20 articles in professional journals, and presented more than 20 papers at professional meetings, including annual meetings of the American Educational Research Association, the American Psychological Association, and the National Council on Measurement in Education. He holds a B.S. in mathematics from John Carroll University, both an M.A. in education and a Ph.D. in educational psychology from Stanford University, and an M.B.A. from the University of Missouri-St. Louis.

Prof. Simone Cummings is currently an associate professor of health care management in the Walker School of Business at Webster University in St. Louis, Missouri, USA, where she teaches statistics for health administration, health care finance, and introduction to health care services. She holds both a B.S.B.A. and an M.H.A from Washington University in St. Louis and a Ph.D. in health management and policy from the University of North Carolina at Chapel Hill.
has served on the Board of the Association of University Programs in Health Administration and currently serves as a Fellow for the Commission on Accreditation of Healthcare Management Education. She has experience in consulting and working in a variety of health care delivery organizations, including hospitals, clinics, and physician groups. She has conducted clinical and health service research for more than 10 years and published articles in *Health Services Research, Healthcare Executive, Trustee, Academic Emergency Medicine, Journal of National Medical Association, and Academic Medicine.*
