Contents

1 Introduction .................................................. 1
   Reference .................................................. 5

2 Societal Requirements/Goals for a Sustainable Transportation System ........................................... 7
   2.1 Greenhouse Gas Emission Requirements ......... 8
   2.2 Dependence on Finite Fossil Fuels .............. 10
   2.3 Local Air Pollution ...................................... 14
   References .................................................. 16

3 Alternative Vehicle and Fuel Options ....................... 19
   3.1 Electric Vehicles .......................................... 19
      3.1.1 Battery Electric Vehicles (BEVs) .......... 19
      3.1.2 Hybrid Electric Vehicles (HEVs) ......... 20
      3.1.3 Plug-in Hybrid Electric Vehicles (PHEVs) .. 21
      3.1.4 Biofuel PHEVs. .................................. 21
      3.1.5 Hydrogen-Powered Fuel Cell Electric Vehicles (FCEVs) .................................. 22
   3.2 Other Alternative Fuel Vehicles .................. 23
      3.2.1 Natural Gas Vehicles (NGVs) ............... 24
      3.2.2 Diesel-Fueled Internal Combustion Vehicles (ICVs) .................................. 24
   References .................................................. 24

4 Alternative Vehicle Market Potential ......................... 25
   4.1 Range Limitations ....................................... 25
   4.2 Fueling Time Limitations ............................ 27
   4.3 Size Limitations ........................................ 29
   4.4 Market Surveys ......................................... 29
   4.5 BEV Market Potential .................................. 30
   References .................................................. 31
11.4 Conclusions .............................................. 86
  11.4.1 Diesel HEV Conclusions ............................ 86
  11.4.2 Natural Gas HEV Conclusions .................... 86

12 State and International Alternative Vehicle Activities .......... 87
  12.1 Federal Fuel Cell R&D ................................ 87
  12.2 State Fuel Cell Initiatives ............................ 88
    12.2.1 California ........................................ 88
  12.3 International Fuel Cell Programs ........................ 89
    12.3.1 Japan ............................................... 89
    12.3.2 Germany ............................................ 89
    12.3.3 Scandinavia ....................................... 89
    12.3.4 UK .................................................. 89
    12.3.5 South Korea ....................................... 90

References .................................................. 90

13 Waste to Hydrogen ........................................ 91
  13.1 Tri-Gen System Description ............................ 91
  13.2 Tri-Gen System Cost Estimates ........................ 93
  13.3 Cost Savings .......................................... 94
    13.3.1 Reduced Electricity Costs ........................ 94
    13.3.2 Reduced Heating Costs ............................ 94
    13.3.3 Hydrogen Sales Income ............................ 95
    13.3.4 Annual Operations and Maintenance (O&M) Costs .... 96
    13.3.5 Net Annual Cost Savings .......................... 97
  13.4 Number of FCEVs on the Road .......................... 97
  13.5 Detailed Cash Flow Analysis of Tri-Gen Hydrogen Fueling Stations ........................................ 98
  13.6 Impact of Lower Gasoline Prices ........................ 101
  13.7 Tri-Gen WWTF Economic Performance in Other Areas of the Country ........................................ 102
  13.8 Greenhouse Gas Emissions and Oil Consumption with Hydrogen Made from Wastewater Treatment Plant Waste ........................................ 106
    13.8.1 Greenhouse Gas Emissions with WWTP Hydrogen .... 106
    13.8.2 Hydrogen Production Potential from Biogas ........ 106
    13.8.3 Oil Consumption with WWTP Hydrogen ............. 107

14 Automobile Companies on FCEVs ................................ 109
  14.1 DaimlerChrysler ....................................... 109
  14.2 Ford ..................................................... 109
  14.3 GM ........................................................ 109
  14.4 Honda Motor ............................................ 110
  14.5 Toyota ................................................... 110
## 15 Conclusions

### 15.1 Transportation Conclusions

#### 15.1.1 Greenhouse Gas Emissions

#### 15.1.2 Petroleum Consumption

#### 15.1.3 Fuel Infrastructure Cost

#### 15.1.4 Urban Air Pollution

#### 15.1.5 Alternative Vehicle Cost

### 15.2 Electricity Generation

#### 15.2.1 Clean Coal Hydrogen and Electricity Generation

#### 15.2.2 Hydrogen as Storage Pathway to Enable More Intermittent Renewable Utilization

### 15.3 Final Summary Conclusions
