Contents

1 Introduction ................................................................. 1

2 Basic Properties of Quasivarieties ........................................ 7
  2.1 Quasi-Identities .......................................................... 7
  2.2 Rules of Inference ....................................................... 8
  2.3 Equational Logics ....................................................... 10
  2.4 Relative Congruences ................................................. 13
  2.5 Free Algebras ........................................................... 15
  2.6 More on Congruences .................................................. 17
  2.7 Properties of Equational Theories ................................. 20
  2.8 Epimorphisms and Isomorphic Embeddings of the Lattice of Theories ................................................. 22
  2.9 The Kernels of Epimorphisms ......................................... 23

3 Commutator Equations and the Equationally-Defined Commutator ................................................................. 27
  3.1 Commutator Equations and the Equationally-Defined Commutator of Congruences ................................................................. 27
    3.1.1 The Standard Commutator .................................... 42
  3.2 The Equationally-Defined Commutator of Equational Theories .... 43
  3.3 More on Epimorphisms and the Equationally-Defined Commutator ................................................................. 45
  3.4 The Relative Shifting Property and the Commutator .............. 52
  3.5 Day Implication Systems and the Relative Shifting Property .... 54
  3.6 The Relative Cube Property .......................................... 59
    3.6.1 The Relative Shifting Property and the Relative Cube Property are Equivalent Properties ......................... 61
4 Centralization Relations ..................................................... 65
  4.1 Four Centralization Relations for Quasi-varieties ................. 65
  4.2 Centralization Relations in the Sense of One-Term Conditions ..... 82
    4.2.1 Three More Centralization Relations .......................... 82
  4.3 Generating Sets of Commutator Equations .......................... 90

5 Additivity of the Equationally-Defined Commutator .................. 99
  5.1 Conditions (C1) and (C2) .............................................. 99
  5.2 Additivity of the Equationally-Defined Commutator
    of Equational Theories ............................................... 109
    5.2.1 The Equationally-Defined Commutator on the Free Algebra $F_Q(\omega)$ ........................................ 118
  5.3 Restricted Distributivity and Additivity of the Equationally-Defined Commutator .................................................................................................................. 129
  5.4 Semilattices and Restricted Distributivity .......................... 149
  5.5 A Characterization of the Equationally-Defined Commutator ....... 153

6 Modularity and Related Topics ............................................. 155
  6.1 Relative Congruence-Modularity and the
    Equationally-Defined Commutator ...................................... 155
  6.2 The Extension Principle .................................................. 160
  6.3 Distributivity in the Lattice of Equational Theories
    of RCM Quasi-varieties .................................................. 166
  6.4 Generating Sets of Commutator Equations in Varieties .......... 174
    6.4.1 Gumm Terms ...................................................... 175
    6.4.2 Varieties with Congruence-Permutable Congruences ....... 177
    6.4.3 Groups ............................................................ 178
    6.4.4 Equivalence Algebras .......................................... 180
  6.5 Various Commutators in Varieties .................................... 182

7 Additivity of the Equationally-Defined Commutator and
  Relatively Congruence-Distributive Subquasivarieties ............... 187
  7.1 Relatively Finitely Subdirectly Irreducible Algebras .......... 187
  7.2 Prime Algebras .......................................................... 195
  7.3 Semiprime Algebras .................................................... 203

8 More on Finitely Generated Quasivarieties .............................. 207
  8.1 Generating Sets for the Equationally-Defined Commutator in Finitely Generated Quasivarieties .......................................................... 207
  8.2 Triangular Irreducibility of Congruences ............................ 211
  8.3 Equationally-Definable $m$-Triangular Meets of Relatively
    Principal Congruences ($m$-EDTPM) .................................. 217
  8.4 Properties Related to $m$-EDTPM ..................................... 226
The Equationally-Defined Commutator
A Study in Equational Logic and Algebra
Czelakowski, J.
2015, IX, 292 p. 3 illus., Hardcover
ISBN: 978-3-319-21199-2
A product of Birkhäuser Basel
