

Contents

Part I The Basics

1	Setting the Scene	3
1.1	Astronomy as an Observational Science	3
1.2	The Electromagnetic Spectrum: The Low-Energy Side	4
1.3	Intergalactic and Interstellar Media	8
1.4	The Atmosphere: Absorption, Scattering, and Emission	9
1.5	Observational Windows	13
1.6	Backgrounds	15
	Problems	17
	References	17
2	Pointing the Telescope: Astronomical Coordinates and Sky Catalogs	19
2.1	Astronomical Coordinate Systems	19
2.2	The Measure of Time	21
2.3	Astrometry	23
2.4	Nomenclature and Catalogs	24
2.5	Internet Resources	27
	Problems	28
	References	29

Part II Optical Astronomy

3	Optical Astronomy: Telescopes	33
3.1	Telescope Mounts	33
3.2	Refracting Telescopes	34
3.3	Geometrical Optics: Optical Aberrations	35
3.4	Single-Mirror Telescopes	37
3.5	Two-Mirror Telescopes	38

3.6	Three-Mirror Telescopes and Beyond	41
3.7	Advanced Telescope Systems	41
	Problems	44
	References	44
4	Telescopes: Ground Based or in Space?	45
4.1	Physical Optics: Diffraction Theory	45
4.2	The Point Spread Function	47
4.3	The Airy Pattern and Diffraction Limited Telescopes	48
4.4	The Effect of the Atmosphere: Seeing	52
4.5	Adaptive Optics Systems	54
4.6	Technical Issues for Ground- and Space-Based Telescopes	57
4.7	Ground- and Space-Based Facilities	58
4.8	Large Telescopes	59
	Problems	63
	References	63
5	Optical Astronomy: Detectors	65
5.1	Detectors: The Basics	65
5.2	Photographic Plates	67
5.3	Photomultiplier Tubes	67
5.4	Photoconductors	68
5.5	Photodiodes	69
5.6	Superconducting Tunnel Junctions	69
5.7	Charge-Coupled Devices (CCDs)	69
	Problems	72
	References	73
6	Optical Photometry	75
6.1	Astrophysical Optical Sources: Fluxes	75
6.2	Photometric Systems	76
6.3	Photographic and Photoelectric Photometry	80
6.4	Photometry with CCDs	81
6.5	Atmospheric Extinction	85
6.6	Transformation to a Standard System	87
6.7	Astrometry with CCD	88
	Problems	88
	References	89
7	Optical Spectroscopy	91
7.1	Astrophysical Optical Sources: Spectra	91
7.2	Dispersive Optical Elements: Prisms, Gratings, Grisms, and Echelles	94
7.3	Slitless Spectrographs	98
7.4	Slit Spectrographs	99
7.5	Advanced Spectrographs	100

- 7.6 Spectroscopy with CCDs 101
- 7.7 Non-dispersive Spectroscopy 102
- Problems 104
- References 104

Part III The Low Energy Side of Classical Astronomy

- 8 Infrared Astronomy 109**
 - 8.1 Astrophysical Infrared Sources: Fluxes and Spectra 109
 - 8.2 Infrared Telescopes 111
 - 8.3 Infrared Detectors 111
 - 8.4 Infrared Imaging 114
 - 8.5 Infrared Spectroscopy 116
 - 8.6 Ground-Based and Space-Based Facilities 116
 - Problems 117
 - References 118
- 9 Radio and Submillimeter Astronomy: Radio Telescopes 119**
 - 9.1 Astrophysical Radio Sources 119
 - 9.2 Radio and Submillimeter Receivers: Superheterodyne
Detection 121
 - 9.3 Antennas for Radioastronomy 122
 - 9.4 Telescopes for Submillimeter Astronomy 125
 - 9.5 Amplifiers 125
 - 9.6 Mixers 126
 - 9.7 Detectors 127
 - 9.8 Calibration 127
 - Problem 128
 - References 128
- 10 Radio and Submillimeter Astronomy:
Receivers and Spectrometers 129**
 - 10.1 Total Power Radiometers 129
 - 10.2 Dicke Switching 130
 - 10.3 Correlation Receiver 130
 - 10.4 Radio Spectrometers 131
 - 10.4.1 Autocorrelation Spectrometers 132
 - 10.4.2 Acousto-Optical Spectrometers 133
 - 10.5 Large Facilities 134
 - 10.6 CMB Observations 134
 - Problem 135
 - References 136

Part IV Instruments Acting Together: Interferometry

11 Interferometry and Aperture Synthesis 139

11.1 Coherence 139

11.2 The van Cittert–Zernike Theorem 140

11.3 Michelson Stellar Interferometer 141

11.4 Aperture Synthesis 142

11.5 Image Reconstruction 143

11.6 Intensity Interferometry 144

References 145

12 Interferometers 147

12.1 Optical and Infrared Interferometers 147

12.2 Radio Interferometers 149

References 151

Part V Observing

13 Observations: Preparation and Execution 155

13.1 Target Selection: Coordinates and Finding Charts 155

13.2 Observations: Site and Epoch Selection 155

13.3 Signal-to-Noise Ratio in Photometric Observations
with CCDs 158

13.4 Signal-to-Noise Ratio in Spectroscopic Observations
with CCDs 160

13.5 At the Observatory 160

13.6 Radio Observations 161

13.7 Interferometric Observations 161

13.8 Observing Proposals 162

Problem 164

References 164

14 After Observation: Data Analysis 165

14.1 A Primer in Astronomical Statistics 165

14.2 Time Series Analysis 167

14.3 Images 168

14.4 Reduction of Photometric Observations 169

14.5 Reduction of Spectroscopic Observations 169

14.6 Reduction of Infrared Data 173

14.7 Reduction of Radio Data 174

14.8 Reduction of Interferometric Data 175

14.9 Astronomical Software 175

Problems 176

References 176
