1	Basics	1
1.1	Introduction	1
1.1.1	Principle of Virtual Displacements	2
1.1.2	Betti's Theorem.	3
1.1.3	Influence Functions	4
1.1.4	Identities	6
1.2	Green's Identities	7
1.2.1	Longitudinal Displacement $u(x)$ of a Bar	7
1.2.2	Shear Deformation $w_s(x)$ of a Beam	8
1.2.3	Deflection w of a Rope	9
1.2.4	Deflection w of a Beam.	9
1.2.5	Deflection w of a Beam, Second-Order Theory	10
1.2.6	Beam on Elastic Support.	10
1.2.7	Tensile Chord Bridge	10
1.3	Variational Principles of Structural Analysis.	11
1.4	Zero Sums	12
1.5	Examples	14
1.5.1	The Principle of Virtual Displacements.	14
1.5.2	Conservation of Energy.	17
1.5.3	The Principle of Virtual Forces	17
1.6	Frames	19
1.7	Single Forces and Moments	21
1.8	Support Settlements	22
1.9	Springs	26
1.10	Temperature	27
1.11	Mohr's Equation.	28
1.12	Duality	29
1.13	Principle of Virtual Forces Versus Betti	30
1.14	Weak and Strong Influence Functions	32

1.15	The Canonical Boundary Values	37
1.16	The Dimension of the f_i	40
1.17	Reduction of the Dimension of a Problem	40
1.18	Boundary Element Method	42
1.19	Finite Elements and Boundary Elements	45
1.20	Must Virtual Displacements Be Small?	47
1.21	Only When in Equilibrium?	48
1.22	What is a Displacement and What is a Force?	49
1.23	The Number of Force and Displacement Terms	50
1.24	Why the Minus in $-EA u'' = p?$	50
1.25	The Virtual Interior Energy	51
1.26	Equilibrium	52
1.27	How a Mathematician Discovers the Equilibrium Conditions	54
1.28	The Mathematics Behind the Equilibrium Conditions	55
1.29	Sinks and Sources	56
1.30	The Principle of Minimum Potential Energy	56
1.30.1	Minimum or Maximum?	58
1.30.2	Cracks	60
1.30.3	The Size of the Trial Space \mathcal{V}	62
1.31	Infinite Energy	65
1.32	Sobolev's Embedding Theorem	69
1.33	Reduction Principle	72
1.34	Nonlinear Problems or Symmetry Lost	74
	References	75
2	Betti's Theorem	77
2.1	Basics	77
2.2	Influence Functions for Displacement Terms	80
2.2.1	Derivation of an Influence Function	81
2.3	Influence Functions for Force Terms	84
2.3.1	Influence Function for $N(x)$	86
2.3.2	Influence Function for $M(x)$	88
2.3.3	Influence Functions for Higher-Order Derivatives	89
2.3.4	Moments Differentiate Influence Functions	89
2.4	Statically Determinate Structures	92
2.4.1	Pole-Plans	95
2.4.2	Construction of Pole-Plans and the Shape of the Displaced Figure	96
2.4.3	How to Determine the Magnitude of Rotations	96
2.4.4	Influence Function for a Shear Force (Fig. 2.20)	99
2.4.5	Influence Function for a Normal Force (Fig. 2.21)	100
2.4.6	Influence Function for a Moment (Fig. 2.22)	101
2.4.7	Influence Function for a Moment (Fig. 2.23)	103
2.4.8	Influence Function for a Shear Force (Fig. 2.24)	103

2.4.9	Influence Function for Two Support Reactions (Fig. 2.25)	103
2.4.10	Abutment Reaction (Fig. 2.26)	106
2.5	Statically Indeterminate Structures	107
2.6	Influence Functions for Support Reactions	109
2.7	The Zeros of the Shear Force	112
2.8	Dirac Deltas	113
2.9	Dirac Energy	115
2.10	Point Values in 2-D and 3-D	122
2.11	Duality	123
2.12	Monopoles and Dipoles	125
2.13	Influence Functions for Integral Values	131
2.14	Influence Functions Integrate	133
2.15	Second-Order Beam Theory	135
	References.	137
3	Finite Elements	139
