# Contents

**Preamble** .................................................. vii

**Contents** ................................................. xi

**Guide to contents** ........................................ xvii
  - Many reasons to write this book ........................ xix
  - Special relativity matters ............................ xxiii
  - Acceleration frontier of physics ....................... xxiv

**Frequently used abbreviations** .......................... xxv

**Part I**  
**Space-Time, Light and the Æther**

1  **Space-Time** .................................................. 3
   1.1 Time, a new 4th coordinate ........................... 3
   1.2 Measuring space and time ............................. 7
   1.3 Speed of light and the æther ........................ 9

2  **The Michelson-Morley Experiment** ....................... 21
   2.1 Earth’s motion and the æther ....................... 21
   2.2 Principle of relativity .............................. 23
   2.3 Cosmic microwave background frame of reference .... 27

3  **Material Bodies in Special Relativity** .................. 29
   3.1 Time dilation, body contraction ....................... 29
   3.2 Reality of the Lorentz-FitzGerald body contraction . 31
   3.3 Path towards Lorentz coordinate transformations ... 39
   3.4 Highlights: how did relativity ‘happen’? .......... 41
Part II  Time Dilation, and Lorentz-Fitzgerald Body Contraction

4  Time Dilation .......................................................... 47
   4.1 Proper time of a traveler ...................................... 47
   4.2 Relativistic light-clock .................................... 51

5  The Lorentz-FitzGerald Body Contraction ......................... 61
   5.1 Universality of time measurement .......................... 61
   5.2 Parallel light-clock .......................................... 62
   5.3 Body contraction ............................................ 63

Part III  The Lorentz Transformation

6  Relativistic Coordinate Transformation ............................ 75
   6.1 Derivation of the form of the Lorentz coordinate transformation ... 75
   6.2 Explicit form of the Lorentz coordinate transformation ........ 80
   6.3 The nonrelativistic Galilean limit .......................... 85
   6.4 The inverse Lorentz coordinate transformation ............ 86

7  Properties of the Lorentz Coordinate Transformation ............ 89
   7.1 Relativistic addition of velocities .......................... 89
   7.2 Aberration of light ........................................ 98
   7.3 Invariance of proper time .................................. 104
   7.4 Two Lorentz coordinate transformations in sequence ........ 106
   7.5 Rapidity .................................................. 108

Part IV  Measurement

8  Body Properties and Lorentz Coordinate Transformations 117
   8.1 Graphic representation of LT ................................ 117
   8.2 Simultaneity and time dilation ............................. 119

9  Different Methods of Measuring Spatial Separation ............. 121
   9.1 Spatial separation measurement with the signal synchronized
       in the rest-frame of the observer $S$ ......................... 122
   9.2 Spatial separation measurement with the signal synchronized
       in the rest-frame of a body $S_0$ ............................ 123
   9.3 Spatial separation measurement due to illumination with light emitted
       in the rest-frame of the observer ............................ 125
   9.4 Train in the tunnel: is the tunnel contracted? ............... 128
17 Tests of Special Relativity

17.1 Direct tests of special relativity
17.2 The Michelson-Morley experiment today
17.3 Tests of Lorentz coordinate transformation
17.4 Measurement of time

Part VII Collisions, Decays

18 A Preferred Frame of Reference

18.1 The center of momentum frame (CM-frame)
18.2 The LT to the CM-frame
18.3 Decay of a body in the CM-frame
18.4 Decay energy balance in CM-frame
18.5 Decay of a body in flight

19 Particle Reactions

19.1 Elastic two-body reactions
19.2 Compton scattering
19.3 Elastic bounce from a moving wall
19.4 Inelastic two-body reaction threshold
19.5 Energy available in a collision
19.6 Inelastic collision and particle production
19.7 Relativistic rocket equation

Part VIII 4-Vectors and 4-Force

20 4-Vectors in Minkowski Space

20.1 Lorentz invariants and covariant equations
20.2 The ‘position’ 4-vector
20.3 Metric in Minkowski space
20.4 Lorentz boosts as generalized rotation
20.5 Metric invariance
20.6 Finding new 4-vectors and invariants

21 4-Velocity and 4-Momentum

21.1 4-velocity $u^\mu$
21.2 Energy-momentum 4-vector
21.3 Properties of Mandelstam variables
### Contents

22 Acceleration and Relativistic Mechanics ........................................ 303  
  22.1 Small acceleration ..................................................... 303  
  22.2 Definition of 4-acceleration ......................................... 305  
  22.3 Relativistic form of Newton’s 2nd Law ............................. 308  
  22.4 The 4-force and work-energy theorem ............................. 311  

Part IX  Motion of Charged Particles

23 The Lorentz Force .......................................................... 317  
  23.1 Motion in magnetic and electric fields ............................ 317  
  23.2 EM-potentials and homogeneous Maxwell equations .......... 325  
  23.3 The Lorentz force: from fields to potentials .................. 329  
  23.4 Lorentz force from variational principle ..................... 330  

24 Electrons Riding a Plane Wave ............................................ 343  
  24.1 Fields and potentials for a plane wave .......................... 343  
  24.2 Role of conservation laws .......................................... 347  
  24.3 Surfing the plane wave .............................................. 352  

Part X  Covariant Force and Field

25 Covariant Formulation of EM-Force ....................................... 361  
  25.1 Lorentz force in terms of 4-potential ............................ 361  
  25.2 Covariant variation-principle ...................................... 366  
  25.3 Covariant Hamiltonian for action principle .................. 374  

26 Covariant Fields and Invariants .......................................... 377  
  26.1 EM-fields: relativistic form ...................................... 377  
  26.2 LT of electromagnetic fields and field invariants .......... 379  
  26.3 Constraints on field invariants .................................. 384  
  26.4 Covariant form of the Lorentz force in terms of fields ..... 386  
  26.5 The Poynting force .................................................. 390  

Part XI  Dynamics of Fields and Particles

27 Variational Principle for EM-Fields ..................................... 399  
  27.1 Maxwell equations with sources .................................. 399  
  27.2 Covariant gauge condition ......................................... 406  
  27.3 Homogeneous Maxwell equations ................................. 412  
  27.4 Energy, momentum and mass of the EM-field ................. 418
