Contents

1 Introduction ................................................................. 1

2 Structural Chromosome Aberrations .................................... 3
  2.1 Intrachromosomal Rearrangements .................................. 3
    2.1.1 Inversions ...................................................... 3
      2.1.1.1 Pericentric Inversions .................................. 3
      2.1.1.2 Paracentric Inversions .................................. 4
    2.1.2 Deletions ..................................................... 4
    2.1.3 Duplications .................................................. 4
    2.1.4 Ring Chromosomes ............................................ 5
    2.1.5 Isochromosomes ............................................... 5
  2.2 Interchromosomal Rearrangements .................................. 6
    2.2.1 Translocations ............................................... 6
      2.2.1.1 Reciprocal Translocations .............................. 6
      2.2.1.2 Robertsonian Translocations or Centric Fusions ...... 7
    2.2.2 Insertions ................................................... 7
    2.2.3 Complex Chromosome Rearrangements (CCR) ................. 8
    2.2.4 Marker Chromosomes (Chromosome Derivates) ............... 9

3 Mutations in Non-coding-DNA Regions ............................... 11
  3.1 Euchromatic Variants ............................................. 11
  3.2 Satellites .......................................................... 11
  3.3 Nucleolus Organising Regions (NOR-Region) ....................... 12
  3.4 Pericentromeric Heterochromatin ................................ 12
  3.5 Centromere ....................................................... 12
  3.6 Heterochromatic Blocks .......................................... 12

4 Single Case Presentations ............................................ 15
  4.1 Introduction ....................................................... 15
  4.2 Structural Chromosome Aberrations ................................ 15
    4.2.1 Intrachromosomal Rearrangements .......................... 15
      4.2.1.1 Inversions ............................................... 15
      4.2.1.2 Deletions ............................................... 98
      4.2.1.3 Duplications ............................................. 137
      4.2.1.4 Ring Chromosomes ...................................... 144
      4.2.1.5 Isochromosomes ........................................ 150
    4.2.2 Interchromosomal Rearrangements .......................... 160
      4.2.2.1 Translocations .......................................... 160
      4.2.2.2 Insertions .............................................. 182
      4.2.2.3 Complex Chromosome Rearrangements (CCR) ......... 185
      4.2.2.4 Marker Chromosomes .................................... 191
5 Mutations in Non-coding-DNA Regions .................................................. 197
  5.1 Euchromatic Variants ................................................................. 197
  5.2 Satellites ................................................................................. 199
  5.3 Nucleolus Organising Regions (NOR-Regions) ......................... 199
  5.4 Pericentromeric Heterochromatin ............................................. 201
  5.5 Centromere ............................................................................ 202
  5.6 Heterochromatic Blocks ........................................................... 203

6 Outlook ......................................................................................... 205

Literature ......................................................................................... 207
Human Chromosome Atlas
Introduction to diagnostics of structural aberrations
Behrend, C.; Karimzad Hagh, J.; Mehdipour, P.; Schwanitz, G.
2017, VIII, 207 p. 97 illus., Hardcover
ISBN: 978-3-319-54098-6
