# Contents

1 The Current Global Surgical Care Paradigm: An Introduction . . . . 1  
1.1 The Global Burden of Surgical Disease: An Unubiquitous Global Health Threat .................................................. 4  
1.2 Defining Essential Surgical Conditions in LMICs .............. 5  
1.3 Surgically Avertable Deaths: A Silent Anomaly ............... 10  
1.4 Surgical Interventions in Global Health: Social and Economic Implications .................................................. 12  
1.5 Catastrophic Healthcare Expenditures ....................... 15  
1.6 Disparities in Provisional Access to Surgical Supplies in LMICs ................................................................. 17  
References. ........................................................................ 19  

2 3-Dimensional Printing and Rapid Device Prototyping .......... 21  
2.1 The Dawn of Disruptive Innovation and Frugal Engineering ...... 21  
2.2 3-Dimensional Printing: An Introduction to Rapid Device Prototyping and Extant Fabrication Processes ................. 24  
2.3 Fused Deposition Modeling and the RepRap Rapid Prototyping Device ................................................................. 32  
References. ........................................................................ 37  

3 3-Dimensional Device Fabrication: A Bio-Based Materials Approach ................................................................. 39  
3.1 Bio-Based Thermoplastic Polymers in 3-Dimensional Printing . . . 40  
3.2 Polylactic-Acid: Bio-Based Thermoplastic Polymer Properties and Medical Device Applications ......................... 45  
3.3 Chemical and Mechanical Profile Modification of Bio-Based Materials: Natural Biocomposite Enhancement ............ 50  
3.4 Polylactic Acid Versus Acrylonitrile Butadiene Styrene Thermoplastics ................................................................. 54  
References. ........................................................................ 59
## 4 3-Dimensional Printing of Medical Devices and Supplies

4.1 Fabrication of High-Utility Surgical Toolkits .......................... 63
4.2 3-Dimensional Printing in the Surgical Field: Applications and Considerations .................................................. 74
4.3 3D Printed Instrument and Medical Supply Price Competencies ........................................................................... 86
References ................................................................................ 92

## 5 3-Dimensional Printing: Intervenotional Capacities in the Global Health Arena

5.1 Barriers to Entry and Adoption of Medical Device Innovations in LMICs ................................................................. 96
5.2 3D Printing: A Paradigm Shift in the Global Medical Device and Humanitarian Supply Chain .......................................................... 101
5.3 The Future of 3-Dimensional Printing: Bio-Based Materials, Medical Device Fabrication, and Open-Source Information Dissemination ........................................................................ 105
5.4 Concluding Remarks ......................................................................... 112
References ................................................................................ 114
3D Printing and Bio-Based Materials in Global Health
An Interventional Approach to the Global Burden of Surgical Disease in Low-and Middle-Income Countries
