

Contents

1	The Single Server Queue	1
1.1	The Single-Server Queueing Model	3
1.2	One-Dimensional Large Deviations	6
1.3	Application to Queues with Large Buffers	9
1.4	Application to Queues with Many Sources	15
2	Large Deviations in Euclidean Spaces	23
2.1	Some Examples	23
2.2	Principle of the Largest Term	25
2.3	Large Deviations Principle	26
2.4	Cumulant Generating Functions	27
2.5	Convex Duality	29
2.6	Cramér’s Theorem	32
2.7	Sanov’s Theorem for Finite Alphabets	38
2.8	A Generalisation of Cramér’s Theorem	41
3	More on the Single Server Queue	47
3.1	Queues with Correlated Inputs	47
3.2	Queues with Many Sources and Power-Law Scalings	52
3.3	Queues with Large Buffers and Power-Law Scalings	55
4	Introduction to Abstract Large Deviations	57
4.1	Topology and Metric Spaces	57
4.2	Definition of LDP	59
4.3	The Contraction Principle	63
4.4	Other Useful LDP Results	67
5	Continuous Queueing Maps	77
5.1	Introduction	77

5.2	An Example: Queues with Large Buffers	78
5.3	The Continuous Mapping Approach	80
5.4	Continuous Functions	81
5.5	Some Convenient Notation	83
5.6	Queues with Infinite Buffers	84
5.7	Queues with Finite Buffers	88
5.8	Queueing Delay	92
5.9	Priority Queues	94
5.10	Processor Sharing	95
5.11	Departures from a Queue	98
5.12	Conclusion	103
6	Large-Buffer Scalings	105
6.1	The Space of Input Processes	105
6.2	Large Deviations for Partial Sums Processes	107
6.3	Linear Geodesics	117
6.4	Queues with Infinite Buffers	120
6.5	Queues with Finite Buffers	125
6.6	Queueing Delay	126
6.7	Departure Process	128
6.8	Mean Rate of Departures	130
6.9	Quasi-Reversibility	137
6.10	Scaling Properties of Networks	144
6.11	Statistical Inference for the Tail-Behaviour of Queues	146
7	Many-Flows Scalings	151
7.1	Traffic Scaling	151
7.2	Topology for Sample Paths	152
7.3	The Sample Path LDP	155
7.4	Example Sample Path LDPs	162
7.5	Applying the Contraction Principle	165
7.6	Queues with Infinite Buffers	166
7.7	Queues with Finite Buffers	170
7.8	Overflow and Underflow	171
7.9	Paths to Overflow	173
7.10	Priority Queues	176
7.11	Departures from a Queue	177

8	Long Range Dependence	183
8.1	What Is Long Range Dependence?	183
8.2	Implications for Queues	185
8.3	Sample Path LDP for Fractional Brownian Motion	187
8.4	Scaling Properties	190
8.5	How Does Long Range Dependence Arise?	195
8.6	Philosophical Difficulties with LRD Modelling	197
9	Moderate Deviations Scalings	199
9.1	Motivation	199
9.2	Traffic Processes	202
9.3	Queue Scalings	203
9.4	Shared Buffers	205
9.5	Mixed Limits	208
10	Interpretations	211
10.1	Effective Bandwidths	211
10.2	Numerical Estimates	218
10.3	A Global Approximation	226
10.4	Scaling Laws	230
10.5	Types of Traffic	232
	Bibliography	239
	Index of Notation	249
	Index	251

Big Queues

Ganesh, A.J.; O'Connell, N.; Wischik, D.J.

2004, XI, 260 p., Softcover

ISBN: 978-3-540-20912-6
