| Preface | VII |
| Motivation | VII |
| Aims, Readership and Book Structure | XII |
| Final Word and Acknowledgments | XIV |
| Description of Contents by Chapter | XIX |
| Abbreviations and Notation | XXXV |

Part I. BASIC DEFINITIONS AND NO ARBITRAGE

| | |
|---|----|
| 1. Definitions and Notation | 1 |
| 1.1 The Bank Account and the Short Rate | 2 |
| 1.2 Zero-Coupon Bonds and Spot Interest Rates | 4 |
| 1.3 Fundamental Interest-Rate Curves | 9 |
| 1.4 Forward Rates | 11 |
| 1.5 Interest-Rate Swaps and Forward Swap Rates | 13 |
| 1.6 Interest-Rate Caps/Floors and Swaptions | 16 |
| 2. No-Arbitrage Pricing and Numeraire Change | 23 |
| 2.1 No-Arbitrage in Continuous Time | 24 |
| 2.2 The Change-of-Numeraire Technique | 26 |
| 2.3 A Change of Numeraire Toolkit (Brigo & Mercurio 2001c) | 28 |
| 2.3.1 A helpful notation: “DC” | 35 |
| 2.4 The Choice of a Convenient Numeraire | 37 |
| 2.5 The Forward Measure | 38 |
| 2.6 The Fundamental Pricing Formulas | 39 |
| 2.6.1 The Pricing of Caps and Floors | 40 |
| 2.7 Pricing Claims with Deferred Payoffs | 42 |
| 2.8 Pricing Claims with Multiple Payoffs | 42 |
| 2.9 Foreign Markets and Numeraire Change | 44 |

Part II. FROM SHORT RATE MODELS TO HJM

| | |
|---|-----|
| 3. One-factor short-rate models | 51 |
| 3.1 Introduction and Guided Tour | 51 |
| 3.2 Classical Time-Homogeneous Short-Rate Models | 57 |
| 3.2.1 The Vasicek Model | 58 |
| 3.2.2 The Dothan Model | 62 |
| 3.2.3 The Cox, Ingersoll and Ross (CIR) Model | 64 |
| 3.2.4 Affine Term-Structure Models | 68 |
| 3.2.5 The Exponential-Vasicek (EV) Model | 70 |
| 3.3 The Hull-White Extended Vasicek Model | 71 |
| 3.3.1 The Short-Rate Dynamics | 72 |
| 3.3.2 Bond and Option Pricing | 75 |
| 3.3.3 The Construction of a Trinomial Tree | 78 |
| 3.4 Possible Extensions of the CIR Model | 80 |
| 3.5 The Black-Karasinski Model | 82 |
| 3.5.1 The Short-Rate Dynamics | 83 |
| 3.5.2 The Construction of a Trinomial Tree | 85 |
| 3.6 Volatility Structures in One-Factor Short-Rate Models | 86 |
| 3.7 Humped-Volatility Short-Rate Models | 92 |
| 3.8 A General Deterministic-Shift Extension | 95 |
| 3.8.1 The Basic Assumptions | 96 |
| 3.8.2 Fitting the Initial Term Structure of Interest Rates ... | 97 |
| 3.8.3 Explicit Formulas for European Options | 99 |
| 3.8.4 The Vasicek Case | 100 |
| 3.9 The CIR++ Model | 102 |
| 3.9.1 The Construction of a Trinomial Tree | 105 |
| 3.9.2 Early Exercise Pricing via Dynamic Programming | 106 |
| 3.9.3 The Positivity of Rates and Fitting Quality | 106 |
| 3.9.4 Monte Carlo Simulation | 109 |
| 3.9.5 Jump Diffusion CIR and CIR++ models (JCIR, JCIR++) | 109 |
| 3.10 Deterministic-Shift Extension of Lognormal Models | 110 |
| 3.11 Some Further Remarks on Derivatives Pricing | 112 |
| 3.11.1 Pricing European Options on a Coupon-Bearing Bond | 112 |
| 3.11.2 The Monte Carlo Simulation | 114 |
| 3.11.3 Pricing Early-Exercise Derivatives with a Tree | 116 |
| 3.11.4 A Fundamental Case of Early Exercise: Bermudan- Style Swaptions. | 121 |
| 3.12 Implied Cap Volatility Curves | 124 |
| 3.12.1 The Black and Karasinski Model | 125 |
| 3.12.2 The CIR++ Model | 126 |
| 3.12.3 The Extended Exponential-Vasicek Model | 128 |
| 3.13 Implied Swaption Volatility Surfaces | 129 |
| 3.13.1 The Black and Karasinski Model | 130 |

| | | |
|-----------|---|------------|
| 3.13.2 | The Extended Exponential-Vasicek Model | 131 |
| 3.14 | An Example of Calibration to Real-Market Data | 132 |
| 4. | Two-Factor Short-Rate Models | 137 |
| 4.1 | Introduction and Motivation | 137 |
| 4.2 | The Two-Additive-Factor Gaussian Model G2++ | 142 |
| 4.2.1 | The Short-Rate Dynamics | 143 |
| 4.2.2 | The Pricing of a Zero-Coupon Bond | 144 |
| 4.2.3 | Volatility and Correlation Structures in Two-Factor Models | 148 |
| 4.2.4 | The Pricing of a European Option on a Zero-Coupon Bond | 153 |
| 4.2.5 | The Analogy with the Hull-White Two-Factor Model . | 159 |
| 4.2.6 | The Construction of an Approximating Binomial Tree. | 162 |
| 4.2.7 | Examples of Calibration to Real-Market Data | 166 |
| 4.3 | The Two-Additive-Factor Extended CIR/LS Model CIR2++ | 175 |
| 4.3.1 | The Basic Two-Factor CIR2 Model | 176 |
| 4.3.2 | Relationship with the Longstaff and Schwartz Model (LS) | 177 |
| 4.3.3 | Forward-Measure Dynamics and Option Pricing for CIR2 | 178 |
| 4.3.4 | The CIR2++ Model and Option Pricing | 179 |
| 5. | The Heath-Jarrow-Morton (HJM) Framework | 183 |
| 5.1 | The HJM Forward-Rate Dynamics | 185 |
| 5.2 | Markovianity of the Short-Rate Process | 186 |
| 5.3 | The Ritchken and Sankarasubramanian Framework | 187 |
| 5.4 | The Mercurio and Moraleda Model | 191 |

Part III. MARKET MODELS

| | | |
|-----------|---|------------|
| 6. | The LIBOR and Swap Market Models (LFM and LSM) . . | 195 |
| 6.1 | Introduction | 195 |
| 6.2 | Market Models: a Guided Tour | 196 |
| 6.3 | The Lognormal Forward-LIBOR Model (LFM) | 207 |
| 6.3.1 | Some Specifications of the Instantaneous Volatility of Forward Rates | 210 |
| 6.3.2 | Forward-Rate Dynamics under Different Numeraires . . | 213 |
| 6.4 | Calibration of the LFM to Caps and Floors Prices | 220 |
| 6.4.1 | Piecewise-Constant Instantaneous-Volatility Structures | 223 |
| 6.4.2 | Parametric Volatility Structures | 224 |
| 6.4.3 | Cap Quotes in the Market | 225 |
| 6.5 | The Term Structure of Volatility | 226 |
| 6.5.1 | Piecewise-Constant Instantaneous Volatility Structures | 228 |

| | | |
|-----------|--|------------|
| 6.5.2 | Parametric Volatility Structures | 231 |
| 6.6 | Instantaneous Correlation and Terminal Correlation | 234 |
| 6.7 | Swaptions and the Lognormal Forward-Swap Model (LSM) | 237 |
| 6.7.1 | Swaptions Hedging | 241 |
| 6.7.2 | Cash-Settled Swaptions | 243 |
| 6.8 | Incompatibility between the LFM and the LSM | 244 |
| 6.9 | The Structure of Instantaneous Correlations | 246 |
| 6.9.1 | Some convenient full rank parameterizations | 248 |
| 6.9.2 | Reduced-rank formulations: Rebonato’s angles and eigen- values zeroing | 250 |
| 6.9.3 | Reducing the angles | 259 |
| 6.10 | Monte Carlo Pricing of Swaptions with the LFM | 264 |
| 6.11 | Monte Carlo Standard Error | 266 |
| 6.12 | Monte Carlo Variance Reduction: Control Variate Estimator | 269 |
| 6.13 | Rank-One Analytical Swaption Prices | 271 |
| 6.14 | Rank- r Analytical Swaption Prices | 277 |
| 6.15 | A Simpler LFM Formula for Swaptions Volatilities | 281 |
| 6.16 | A Formula for Terminal Correlations of Forward Rates | 284 |
| 6.17 | Calibration to Swaptions Prices | 287 |
| 6.18 | Instantaneous Correlations: Inputs (Historical Estimation) or Outputs (Fitting Parameters)? | 290 |
| 6.19 | The exogenous correlation matrix | 291 |
| 6.19.1 | Historical Estimation | 292 |
| 6.19.2 | Pivot matrices | 295 |
| 6.20 | Connecting Caplet and $S \times 1$ -Swaption Volatilities | 300 |
| 6.21 | Forward and Spot Rates over Non-Standard Periods | 307 |
| 6.21.1 | Drift Interpolation | 308 |
| 6.21.2 | The Bridging Technique | 310 |
| 7. | Cases of Calibration of the LIBOR Market Model | 313 |
| 7.1 | Inputs for the First Cases | 315 |
| 7.2 | Joint Calibration with Piecewise-Constant Volatilities as in TABLE 5 | 315 |
| 7.3 | Joint Calibration with Parameterized Volatilities as in For- mulation 7 | 319 |
| 7.4 | Exact Swaptions “Cascade” Calibration with Volatilities as in TABLE 1 | 322 |
| 7.4.1 | Some Numerical Results | 330 |
| 7.5 | A Pause for Thought | 337 |
| 7.5.1 | First summary | 337 |
| 7.5.2 | An automatic fast analytical calibration of LFM to swaptions. Motivations and plan | 338 |
| 7.6 | Further Numerical Studies on the Cascade Calibration Algo- rithm | 340 |

| | | |
|-----------|---|------------|
| 7.6.1 | Cascade Calibration under Various Correlations and Ranks | 342 |
| 7.6.2 | Cascade Calibration Diagnostics: Terminal Correlation and Evolution of Volatilities | 346 |
| 7.6.3 | The interpolation for the swaption matrix and its impact on the CCA | 349 |
| 7.7 | Empirically efficient Cascade Calibration | 351 |
| 7.7.1 | CCA with Endogenous Interpolation and Based Only on Pure Market Data | 352 |
| 7.7.2 | Financial Diagnostics of the RCCAEI test results | 359 |
| 7.7.3 | Endogenous Cascade Interpolation for missing swaptions volatilities quotes | 364 |
| 7.7.4 | A first partial check on the calibrated σ parameters stability | 364 |
| 7.8 | Reliability: Monte Carlo tests | 366 |
| 7.9 | Cascade Calibration and the cap market | 369 |
| 7.10 | Cascade Calibration: Conclusions | 372 |
| 8. | Monte Carlo Tests for LFM Analytical Approximations | 377 |
| 8.1 | First Part. Tests Based on the Kullback Leibler Information (KLI) | 378 |
| 8.1.1 | Distance between distributions: The Kullback Leibler information | 378 |
| 8.1.2 | Distance of the LFM swap rate from the lognormal family of distributions | 381 |
| 8.1.3 | Monte Carlo tests for measuring KLI | 384 |
| 8.1.4 | Conclusions on the KLI-based approach | 391 |
| 8.2 | Second Part: Classical Tests | 392 |
| 8.3 | The “Testing Plan” for Volatilities | 392 |
| 8.4 | Test Results for Volatilities | 396 |
| 8.4.1 | Case (1): Constant Instantaneous Volatilities | 396 |
| 8.4.2 | Case (2): Volatilities as Functions of Time to Maturity | 401 |
| 8.4.3 | Case (3): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity | 410 |
| 8.5 | The “Testing Plan” for Terminal Correlations | 421 |
| 8.6 | Test Results for Terminal Correlations | 427 |
| 8.6.1 | Case (i): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Typical Rank-Two Correlations | 427 |
| 8.6.2 | Case (ii): Constant Instantaneous Volatilities, Typical Rank-Two Correlations | 430 |
| 8.6.3 | Case (iii): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Some Negative Rank-Two Correlations | 432 |

| | | |
|-------|---|-----|
| 8.6.4 | Case (iv): Constant Instantaneous Volatilities, Some Negative Rank-Two Correlations..... | 438 |
| 8.6.5 | Case (v): Constant Instantaneous Volatilities, Perfect Correlations, Upwardly Shifted Φ 's | 439 |
| 8.7 | Test Results: Stylized Conclusions | 442 |

Part IV. THE VOLATILITY SMILE

| | | |
|------------|---|------------|
| 9. | Including the Smile in the LFM | 447 |
| 9.1 | A Mini-tour on the Smile Problem..... | 447 |
| 9.2 | Modeling the Smile | 450 |
| 10. | Local-Volatility Models | 453 |
| 10.1 | The Shifted-Lognormal Model | 454 |
| 10.2 | The Constant Elasticity of Variance Model | 456 |
| 10.3 | A Class of Analytically-Tractable Models | 459 |
| 10.4 | A Lognormal-Mixture (LM) Model | 463 |
| 10.5 | Forward Rates Dynamics under Different Measures | 467 |
| 10.5.1 | Decorrelation Between Underlying and Volatility | 469 |
| 10.6 | Shifting the LM Dynamics..... | 469 |
| 10.7 | A Lognormal-Mixture with Different Means (LMDM) | 471 |
| 10.8 | The Case of Hyperbolic-Sine Processes | 473 |
| 10.9 | Testing the Above Mixture-Models on Market Data | 475 |
| 10.10 | A Second General Class | 478 |
| 10.11 | A Particular Case: a Mixture of GBM's | 483 |
| 10.12 | An Extension of the GBM Mixture Model Allowing for Implied Volatility Skews | 486 |
| 10.13 | A General Dynamics à la Dupire (1994) | 489 |
| 11. | Stochastic-Volatility Models | 495 |
| 11.1 | The Andersen and Brotherton-Ratcliffe (2001) Model | 497 |
| 11.2 | The Wu and Zhang (2002) Model..... | 501 |
| 11.3 | The Piterbarg (2003) Model | 504 |
| 11.4 | The Hagan, Kumar, Lesniewski and Woodward (2002) Model | 508 |
| 11.5 | The Joshi and Rebonato (2003) Model | 513 |
| 12. | Uncertain-Parameter Models | 517 |
| 12.1 | The Shifted-Lognormal Model with Uncertain Parameters (SLMUP) | 519 |
| 12.1.1 | Relationship with the Lognormal-Mixture LVM | 520 |
| 12.2 | Calibration to Caplets | 520 |
| 12.3 | Swaption Pricing | 522 |
| 12.4 | Monte-Carlo Swaption Pricing | 524 |
| 12.5 | Calibration to Swaptions | 526 |

| | | |
|------|--|-----|
| 12.6 | Calibration to Market Data | 528 |
| 12.7 | Testing the Approximation for Swaptions Prices | 530 |
| 12.8 | Further Model Implications | 535 |
| 12.9 | Joint Calibration to Caps and Swaptions | 539 |

Part V. EXAMPLES OF MARKET PAYOFFS

| | | |
|------------|--|------------|
| 13. | Pricing Derivatives on a Single Interest-Rate Curve | 547 |
| 13.1 | In-Arrears Swaps | 548 |
| 13.2 | In-Arrears Caps | 550 |
| 13.2.1 | A First Analytical Formula (LFM) | 550 |
| 13.2.2 | A Second Analytical Formula (G2++) | 551 |
| 13.3 | Autocaps | 551 |
| 13.4 | Caps with Deferred Caplets | 552 |
| 13.4.1 | A First Analytical Formula (LFM) | 553 |
| 13.4.2 | A Second Analytical Formula (G2++) | 553 |
| 13.5 | Ratchet Caps and Floors | 554 |
| 13.5.1 | Analytical Approximation for Ratchet Caps with the LFM | 555 |
| 13.6 | Ratchets (One-Way Floaters) | 556 |
| 13.7 | Constant-Maturity Swaps (CMS) | 557 |
| 13.7.1 | CMS with the LFM | 557 |
| 13.7.2 | CMS with the G2++ Model | 559 |
| 13.8 | The Convexity Adjustment and Applications to CMS | 559 |
| 13.8.1 | Natural and Unnatural Time Lags | 559 |
| 13.8.2 | The Convexity-Adjustment Technique | 561 |
| 13.8.3 | Deducing a Simple Lognormal Dynamics from the Adjustment | 565 |
| 13.8.4 | Application to CMS | 565 |
| 13.8.5 | Forward Rate Resetting Unnaturally and Average-Rate Swaps | 566 |
| 13.9 | Average Rate Caps | 568 |
| 13.10 | Captions and Floortions | 570 |
| 13.11 | Zero-Coupon Swaptions | 571 |
| 13.12 | Eurodollar Futures | 575 |
| 13.12.1 | The Shifted Two-Factor Vasicek G2++ Model | 576 |
| 13.12.2 | Eurodollar Futures with the LFM | 577 |
| 13.13 | LFM Pricing with “In-Between” Spot Rates | 578 |
| 13.13.1 | Accrual Swaps | 579 |
| 13.13.2 | Trigger Swaps | 582 |
| 13.14 | LFM Pricing with Early Exercise and Possible Path Dependence | 584 |
| 13.15 | LFM: Pricing Bermudan Swaptions | 588 |
| 13.15.1 | Least Squared Monte Carlo Approach | 589 |
| 13.15.2 | Carr and Yang’s Approach | 591 |

| | |
|---|------------|
| 13.15.3 Andersen's Approach | 592 |
| 13.15.4 Numerical Example | 595 |
| 13.16 New Generation of Contracts | 601 |
| 13.16.1 Target Redemption Notes | 602 |
| 13.16.2 CMS Spread Options | 603 |
| 14. Pricing Derivatives on Two Interest-Rate Curves | 607 |
| 14.1 The Attractive Features of G2++ for Multi-Curve Payoffs ... | 608 |
| 14.1.1 The Model | 608 |
| 14.1.2 Interaction Between Models of the Two Curves "1" and "2" | 610 |
| 14.1.3 The Two-Models Dynamics under a Unique Conve- nient Forward Measure | 611 |
| 14.2 Quanto Constant-Maturity Swaps | 613 |
| 14.2.1 Quanto CMS: The Contract | 613 |
| 14.2.2 Quanto CMS: The G2++ Model | 615 |
| 14.2.3 Quanto CMS: Quanto Adjustment | 621 |
| 14.3 Differential Swaps | 623 |
| 14.3.1 The Contract | 623 |
| 14.3.2 Differential Swaps with the G2++ Model | 624 |
| 14.3.3 A Market-Like Formula | 626 |
| 14.4 Market Formulas for Basic Quanto Derivatives | 626 |
| 14.4.1 The Pricing of Quanto Caplets/Floorlets | 627 |
| 14.4.2 The Pricing of Quanto Caps/Floors | 628 |
| 14.4.3 The Pricing of Differential Swaps | 629 |
| 14.4.4 The Pricing of Quanto Swaptions | 630 |
| 14.5 Pricing of Options on two Currency LIBOR Rates | 633 |
| 14.5.1 Spread Options | 635 |
| 14.5.2 Options on the Product | 637 |
| 14.5.3 Trigger Swaps | 638 |
| 14.5.4 Dealing with Multiple Dates | 639 |

Part VI. INFLATION

| | |
|---|------------|
| 15. Pricing of Inflation-Indexed Derivatives | 643 |
| 15.1 The Foreign-Currency Analogy | 644 |
| 15.2 Definitions and Notation | 645 |
| 15.3 The JY Model | 646 |
| 16. Inflation-Indexed Swaps | 649 |
| 16.1 Pricing of a ZCIIS | 649 |
| 16.2 Pricing of a YYIIS | 651 |
| 16.3 Pricing of a YYIIS with the JY Model | 652 |
| 16.4 Pricing of a YYIIS with a First Market Model | 654 |

16.5 Pricing of a YYIIS with a Second Market Model 657

17. Inflation-Indexed Caplets/Floorlets 661

 17.1 Pricing with the JY Model 661

 17.2 Pricing with the Second Market Model 663

 17.3 Inflation-Indexed Caps 665

18. Calibration to market data 669

19. Introducing Stochastic Volatility 673

 19.1 Modeling Forward CPI's with Stochastic Volatility 674

 19.2 Pricing Formulae 676

 19.2.1 Exact Solution for the Uncorrelated Case 677

 19.2.2 Approximated Dynamics for Non-zero Correlations ... 680

 19.3 Example of Calibration 681

20. Pricing Hybrids with an Inflation Component 689

 20.1 A Simple Hybrid Payoff 689

Part VII. CREDIT

21. Introduction and Pricing under Counterparty Risk 695

 21.1 Introduction and Guided Tour 696

 21.1.1 Reduced form (Intensity) models 697

 21.1.2 CDS Options Market Models 699

 21.1.3 Firm Value (or Structural) Models 702

 21.1.4 Further Models 704

 21.1.5 The Multi-name picture: FtD, CDO and Copula Func-
 tions 705

 21.1.6 First to Default (FtD) Basket. 705

 21.1.7 Collateralized Debt Obligation (CDO) Tranches. 707

 21.1.8 Where can we introduce dependence? 708

 21.1.9 Copula Functions. 710

 21.1.10 Dynamic Loss models. 718

 21.1.11 What data are available in the market? 719

 21.2 Defaultable (corporate) zero coupon bonds 723

 21.2.1 Defaultable (corporate) coupon bonds 724

 21.3 Credit Default Swaps and Defaultable Floaters 724

 21.3.1 CDS payoffs: Different Formulations 725

 21.3.2 CDS pricing formulas 727

 21.3.3 Changing filtration: \mathcal{F}_t without default VS complete
 \mathcal{G}_t 728

 21.3.4 CDS forward rates: The first definition 730

| | | |
|------------|--|------------|
| 21.3.5 | Market quotes, model independent implied survival probabilities and implied hazard functions | 731 |
| 21.3.6 | A simpler formula for calibrating intensity to a single CDS | 735 |
| 21.3.7 | Different Definitions of CDS Forward Rates and Analogies with the LIBOR and SWAP rates | 737 |
| 21.3.8 | Defaultable Floater and CDS | 739 |
| 21.4 | CDS Options and Callable Defaultable Floaters | 743 |
| 21.5 | Constant Maturity CDS | 744 |
| 21.5.1 | Some interesting Financial features of CMCDs | 745 |
| 21.6 | Interest-Rate Payoffs with Counterparty Risk | 747 |
| 21.6.1 | General Valuation of Counterparty Risk | 748 |
| 21.6.2 | Counterparty Risk in single Interest Rate Swaps (IRS) | 750 |
| 22. | Intensity Models | 757 |
| 22.1 | Introduction and Chapter Description | 757 |
| 22.2 | Poisson processes | 759 |
| 22.2.1 | Time homogeneous Poisson processes | 760 |
| 22.2.2 | Time inhomogeneous Poisson Processes | 761 |
| 22.2.3 | Cox Processes | 763 |
| 22.3 | CDS Calibration and Implied Hazard Rates/ Intensities | 764 |
| 22.4 | Inducing dependence between Interest-rates and the default event | 776 |
| 22.5 | The Filtration Switching Formula: Pricing under partial information | 777 |
| 22.6 | Default Simulation in reduced form models | 778 |
| 22.6.1 | Standard error | 781 |
| 22.6.2 | Variance Reduction with Control Variate | 783 |
| 22.7 | Stochastic Intensity: The SSRD model | 785 |
| 22.7.1 | A two-factor shifted square-root diffusion model for intensity and interest rates (Brigo and Alfonsi (2003)) | 786 |
| 22.7.2 | Calibrating the joint stochastic model to CDS: Separability | 789 |
| 22.7.3 | Discretization schemes for simulating (λ, r) | 797 |
| 22.7.4 | Study of the convergence of the discretization schemes for simulating CIR processes (Alfonsi (2005)) | 801 |
| 22.7.5 | Gaussian dependence mapping: A tractable approximated SSRD | 812 |
| 22.7.6 | Numerical Tests: Gaussian Mapping and Correlation Impact | 815 |
| 22.7.7 | The impact of correlation on a few “test payoffs” | 817 |
| 22.7.8 | A pricing example: A Cancellable Structure | 818 |
| 22.7.9 | CDS Options and Jamshidian’s Decomposition | 820 |
| 22.7.10 | Bermudan CDS Options | 830 |

| | | |
|------------|---|------------|
| 22.8 | Stochastic diffusion intensity is not enough: Adding jumps. | |
| | The JCIR(++) Model | 830 |
| 22.8.1 | The jump-diffusion CIR model (JCIR) | 831 |
| 22.8.2 | Bond (or Survival Probability) Formula. | 832 |
| 22.8.3 | Exact calibration of CDS: The JCIR++ model | 833 |
| 22.8.4 | Simulation. | 833 |
| 22.8.5 | Jamshidian's Decomposition. | 834 |
| 22.8.6 | Attaining high levels of CDS implied volatility | 836 |
| 22.8.7 | JCIR(++) models as a multi-name possibility. | 837 |
| 22.9 | Conclusions and further research | 838 |
| 23. | CDS Options Market Models | 841 |
| 23.1 | CDS Options and Callable Defaultable Floaters | 844 |
| 23.1.1 | Once-callable defaultable floaters | 846 |
| 23.2 | A market formula for CDS options and callable defaultable floaters | 847 |
| 23.2.1 | Market formulas for CDS Options | 847 |
| 23.2.2 | Market Formula for callable DFRN | 849 |
| 23.2.3 | Examples of Implied Volatilities from the Market | 852 |
| 23.3 | Towards a Completely Specified Market Model | 854 |
| 23.3.1 | First Choice. One-period and two-period rates | 855 |
| 23.3.2 | Second Choice: Co-terminal and one-period CDS rates market model | 860 |
| 23.3.3 | Third choice. Approximation: One-period CDS rates dynamics | 861 |
| 23.4 | Hints at Smile Modeling. | 863 |
| 23.5 | Constant Maturity Credit Default Swaps (CMCDS) with the market model | 864 |
| 23.5.1 | CDS and Constant Maturity CDS | 864 |
| 23.5.2 | Proof of the main result | 867 |
| 23.5.3 | A few numerical examples | 869 |

Part VIII. APPENDICES

| | | |
|-----------|---|------------|
| A. | Other Interest-Rate Models | 877 |
| A.1 | Brennan and Schwartz's Model. | 877 |
| A.2 | Balduzzi, Das, Foresi and Sundaram's Model. | 878 |
| A.3 | Flesaker and Hughston's Model | 879 |
| A.4 | Rogers's Potential Approach | 881 |
| A.5 | Markov Functional Models. | 881 |

| | |
|--|-----|
| B. Pricing Equity Derivatives under Stochastic Rates | 883 |
| B.1 The Short Rate and Asset-Price Dynamics | 883 |
| B.1.1 The Dynamics under the Forward Measure | 886 |
| B.2 The Pricing of a European Option on the Given Asset | 888 |
| B.3 A More General Model | 889 |
| B.3.1 The Construction of an Approximating Tree for r | 890 |
| B.3.2 The Approximating Tree for S | 892 |
| B.3.3 The Two-Dimensional Tree | 893 |
| C. A Crash Intro to Stochastic Differential Equations and Poisson Processes | 897 |
| C.1 From Deterministic to Stochastic Differential Equations | 897 |
| C.2 Ito's Formula | 904 |
| C.3 Discretizing SDEs for Monte Carlo: Euler and Milstein Schemes | 906 |
| C.4 Examples | 908 |
| C.5 Two Important Theorems | 910 |
| C.6 A Crash Intro to Poisson Processes | 913 |
| C.6.1 Time inhomogeneous Poisson Processes | 915 |
| C.6.2 Doubly Stochastic Poisson Processes (or Cox Processes) | 916 |
| C.6.3 Compound Poisson processes | 917 |
| C.6.4 Jump-diffusion Processes | 918 |
| D. A Useful Calculation | 919 |
| E. A Second Useful Calculation | 921 |
| F. Approximating Diffusions with Trees | 925 |
| G. Trivia and Frequently Asked Questions | 931 |
| H. Talking to the Traders | 935 |
| References | 951 |
| Index | 967 |

Interest Rate Models - Theory and Practice
With Smile, Inflation and Credit

Brigo, D.; Mercurio, F.

2006, LVI, 982 p., Hardcover

ISBN: 978-3-540-22149-4
