

# Contents

<b>1</b>	<b>The Environment of Plants</b>	<b>1</b>
1.1	The Surroundings of Plants	1
1.2	Radiation and Climate	32
<b>2</b>	<b>Carbon Utilization and Dry Matter Production</b>	<b>69</b>
2.1	Carbon Metabolism in the Cell	69
2.2	Gas Exchange in Plants	91
2.3	The Carbon Budget of the Whole Plant	139
2.4	The Carbon Budget of Plant Stands	163
2.5	Energy Conversion by the Plant Cover	173
<b>3</b>	<b>The Utilization of Mineral Elements</b>	<b>185</b>
3.1	The Soil as a Nutrient Source for Plants	185
3.2	The Uptake of Mineral Nutrients	186
3.3	Utilization and Deposition of Minerals in the Plant	193
3.4	The Elimination of Minerals	202
3.5	Nitrogen Metabolism	203
3.6	Habitat-Related Aspects of Mineral Metabolism	211
3.7	Mineral Cycling in Plant Communities	224
<b>4</b>	<b>Water Relations</b>	<b>231</b>
4.1	Poikilohydric and Homiohydric Plants	231
4.2	Water Relations of Plant Cells	233
4.3	Water Relations of the Whole Plant	239
4.4	Water Relations in Plant Communities	286
<b>5</b>	<b>Environmental Influences on Growth and Development</b>	<b>297</b>
5.1	Regulation of Growth and Development	298
5.2	Developmental Stages of the Plant Life Cycle	307
5.3	The Seasonality of Growth and Development	324
5.4	Phenology: Plant Development as an Indicator of Weather Characteristics and Climate Changes	329

<b>6</b>	<b>Plants Under Stress</b>	<b>345</b>
6.1	Stress: Disturbance and Syndrome	345
6.2	Solar Radiation Stress	357
6.3	Stress Due to Extreme Temperatures	364
6.4	Oxygen Deficiency	396
6.5	Drought	401
6.6	Salt Stress	416
6.7	Excess of Heavy Metals	428
6.8	Pollutants and Their Impact on the Phytosphere	437

<b>References</b>	<b>451</b>

## **Boxes**

Box 1.1	M. Küppers: <i>Space Filling by Foliage: The Effect of Growth Form and Architecture on the Light Environment</i>	40
Box 1.2	M. Küppers: <i>Space Filling by Foliage: Simulation of Crown Architectural Growth as a Factor in Competition</i>	45
Box 2.1	U. Schreiber: <i>In Vivo Chlorophyll Fluorescence: Assessment and Analysis of Photosynthesis Function</i>	73
Box 2.2	A.J.E. van Bel: <i>Phloem Transport: The Collective Power of Single Modules</i>	151
Box 2.3	Ch. Körner: <i>Atmospheric CO<sub>2</sub> Enrichment: an Ecological Perspective</i>	177
Box 3.1	J.F. Ma: <i>Aluminum Tolerance in Plants</i>	218
Box 4.1	E. Steudle: <i>Uptake of Water by Plant Roots</i>	247
Box 4.2	H. Richter: <i>Long Distance Transport of Water in Plants and the Cohesion Theory</i>	254
Box 5.1	R. Borchert: <i>Environmental Control of Vegetative Phenology in Tropical Dry Forest Trees</i>	337
Box 6.1	B. Demmig-Adams, W.W. Adams III: <i>Photoprotection Against Excess Light Via Zeaxanthin-Dependent Energy Dissipation</i>	359
Box 6.2	L. Kappen, B. Schroeter: <i>Surviving in the Cold: How Lichens Cope with the Environmental Conditions in Polar Regions</i>	369
Box 6.3	W.H.O. Ernst: <i>Evolution of Adaptation Mechanism of Plants on Metal-Enriched Soils</i>	433

Physiological Plant Ecology  
Ecophysiology and Stress Physiology of Functional  
Groups

Larcher, W.

2003, XX, 514 p., Hardcover

ISBN: 978-3-540-43516-7
