Contents

1 Synthesis of Aluminosilicate Zeolites and Related Silica-Based Materials ........................................ 1

Jean-Louis Guth and Henri Kessler

1.1 Scope .............................................. 1
1.2 Introduction ...................................... 1
1.2.1 Structure, Composition, Nomenclature ............... 1
1.2.2 History of Zeolite Synthesis ......................... 4
1.3 Theoretical Part ..................................... 5
1.3.1 Crystallogenesis .................................. 5
1.3.1.1 Nucleation ...................................... 5
1.3.1.2 Crystal Growth .................................. 9
1.3.1.3 Advancement of the Crystallization with Time .... 13
1.3.1.4 Ostwald's Rule .................................... 14
1.3.2 Zeolite Synthesis, Mechanism and Chemistry ....... 16
1.3.2.1 Presentation of the Synthesis System ............. 16
1.3.2.2 Framework T Elements ............................ 18
1.3.2.3 Mineralizer and T Element Species in the Solution 20
1.3.2.4 Templates ...................................... 22
1.4 Experimental Part .................................... 23
1.4.1 Experimental Factors .............................. 23
1.4.1.1 Nature of the Reactants .......................... 24
1.4.1.2 Composition of the Reaction Mixture ............. 24
1.4.1.3 Preparation Procedure of the Reaction Mixture ... 25
1.4.1.4 Aging ............................................. 26
1.4.1.5 Seeding .......................................... 26
1.4.1.6 Nature of the Reactor ............................ 26
1.4.1.7 Crystallization Temperature ....................... 27
1.4.1.8 Pressure .......................................... 27
1.4.1.9 Agitation ......................................... 27
1.4.1.10 Heating Time .................................... 27
1.4.2 Review of Zeolites Obtained from Various Reaction Systems .... 28
1.4.2.1 All-Silica Molecular Sieves (T = Si) ............... 28
1.4.2.2 (Si, Al) Systems with Inorganic Cations ............ 28
1.4.2.3 (Si, Al) Systems with Inorganic and Organic Templates 29
3  Modification of Zeolites ........................................ 81
Günter H. Kühl

3.1  Ion Exchange of Zeolites ........................................ 81
3.1.1  Introduction and Theory .................................... 81
3.1.2  Aqueous Ion Exchange .................................... 81
3.1.2.1  Ion-Exchange Isotherms ................................ 84
3.1.2.2  Experimental ............................................ 86
3.1.2.3  Thermochemistry of Ion Exchange ....................... 88
3.1.3  Ion Exchange of Zeolites X and Y ......................... 88
3.1.3.1  Univalent Ion Exchange ................................ 90
3.1.3.2  Divalent Ion Exchange ................................ 93
3.1.3.3  Trivalent Ion Exchange ................................ 98
3.1.4  Ion Exchange of ZSM-5 .................................... 100
3.1.4.1  Univalent Ion Exchange ................................ 100
3.1.4.2  Divalent Ion Exchange ................................ 102
3.1.4.3  Trivalent Ion Exchange ................................ 103
3.1.4.4  Aluminum-Independent Ion Exchange .................. 103
3.2  Metals Supported on Zeolites ................................. 104
3.2.1  Reduction of Metal Ions in Zeolites ....................... 105
3.2.1.1  Group IB .................................................. 105
3.2.1.2  Group VIIIA, Fourth Period ............................. 113
3.2.1.3  Group VIIIA, Fifth Period .............................. 116
3.2.1.4  Group VIIIA, Sixth Period .............................. 123
3.3  Dealumination of Zeolites ..................................... 127
3.3.1  Thermal Treatment .......................................... 127
3.3.1.1  Hydrogen Zeolites ...................................... 128
3.3.1.2  Dehydroxylation ......................................... 132
3.3.2  Extraction of Framework Aluminum with Acid ............. 133
3.3.2.1  The Aluminum-Deficient Form .......................... 134
3.3.2.2  Annealing of Tetrahedral Vacancies; High-Silica Faujasite .... 135
3.3.3  Hydrothermal Treatment .................................... 136
3.3.3.1  The Stabilized Form .................................... 136
3.3.3.2  The Ultrastable Form ................................... 140
3.3.3.3  Dealumination of High-Silica Zeolites .................. 142
3.3.4  Direct Replacement of Aluminum with Silicon ............. 145
3.3.4.1  Reaction with Silicon Halides .......................... 145
3.3.4.2  Reaction with Hexafluorosilicates ...................... 151
3.3.5  Removal of Other Framework Elements ...................... 154
3.4  Insertion into the Zeolite Framework ......................... 155
3.4.1  Reinsertion of Hydrolyzed Aluminum ....................... 155
3.4.2  Reaction with Aluminum Compounds ......................... 157
3.4.2.1  Aqueous Aluminate ..................................... 157
3.4.2.2  Aluminum Oxide .......................................... 158
3.4.2.3  Aluminum Halides ........................................ 161
3.4.2.4  Complex Aluminum Fluoride ............................ 163
4 Characterization of Zeolites – Infrared and Nuclear Magnetic Resonance Spectroscopy and X-Ray Diffraction

Hellmut G. Karge, Michael Hunger, and Hermann K. Beyer

List of Abbreviations .................................................. 198
Introdution ............................................................. 199
4.1 IR Spectroscopy ....................................................... 201
4.1.1 Introduction ..................................................... 201
4.1.2 Theoretical Background ...................................... 201
4.1.3 Experimental Techniques .................................... 204
4.1.3.1 Transmission IR Spectroscopy ......................... 204
4.1.3.2 Diffuse Reflectance IR (Fourier Transform) Spectroscopy (DRIFT) .................... 206
4.1.3.3 Photoacoustic IR Spectroscopy (PAS) ................. 207
4.1.3.4 Cells for Studying Zeolites and Zeolite Adsorbate Systems by IR Spectroscopy ........ 208
4.1.4 Study of Framework Vibrations of Zeolites ................ 211
4.1.5 IR Investigation of Acidic and Basic Sites in Zeolites .......... 215
4.1.5.1 Bronsted Acid Sites (Acidic Hydroxyls) ............. 216
4.1.5.2 Lewis Acid Sites – True Lewis Sites .................. 230
4.1.5.3 Lewis Acid Sites – Cations ............................. 231
4.1.6 Basic Sites (Basic Hydroxyls, Basic Oxygens) ............... 233
4.1.7 Zeolite-Adsorbate Systems .................................. 235
4.1.8 Motion, Diffusion and Reaction of Guest Molecules in Zeolites . 238
4.2 NMR Spectroscopy ................................................ 239
4.2.1 Introduction ..................................................... 239
4.2.2 Theoretical Background ..................................... 240
4.2.2.1 Zeeman Interaction and Relaxation Effects .......... 240
4.2.2.2 Solid-State Interactions ................................ 242
4.2.3 Experimental Techniques .................................... 245
4.2.3.1 Methods of High-Resolution Solid-State NMR ......... 245
4.2.3.2 Cross-Polarization and Other Selected Pulse Techniques 248
4.2.3.3 Two-Dimensional NMR Spectroscopy 249
4.2.4 Applications 250
4.2.4.1 $^{29}$Si MAS NMR Spectroscopy of SiO$_4$ Tetrahedra in the Zeolite Framework 250
4.2.4.2 $^{27}$Al NMR Spectroscopy of Framework and Non-Framework Aluminum in Zeolites 256
4.2.4.3 $^{31}$P MAS NMR Spectroscopy of PO$_4$ Tetrahedra in Aluminophosphate-, Silicoaluminophosphate-, and Gallophosphate-Type Zeolites 262
4.2.4.4 $^{11}$B MAS NMR Spectroscopy of Boron-Modified Zeolites 266
4.2.4.5 Solid-State $^{17}$O NMR Spectroscopy of the Zeolite Framework 266
4.2.4.6 $^1$H MAS NMR Spectroscopy of Acidic and Non-Acidic Hydroxyl Groups in Zeolites 267
4.2.4.7 Solid-State $^{23}$Na NMR Spectroscopy of Sodium Cations in Hydrated and Dehydrated Zeolites 275
4.2.4.8 $^{133}$Cs MAS NMR Spectroscopy of Cesium Cations in Hydrated and Dehydrated Mordenites and Faujasites 282
4.2.4.9 $^{129}$Xe NMR Investigations of the Zeolitic Pore Architecture 285
4.2.4.10 Investigations of Brønsted and Lewis Acid Sites by Probe Molecules 291
4.3 Application of Powder X-Ray Diffractometry in Zeolite Research 295
4.3.1 Introduction 295
4.3.2 Parameters Affecting the Intensity of Bragg Reflections 296
4.3.3 Calculation of Structure Factors 299
4.3.4 Powder-Data Structure Refinement 302
4.3.4.1 Profile-Fitting Method 303
4.3.4.2 Rietveld Method 304
4.3.4.3 Application of the Rietveld Method in Zeolite Structure Analysis 306
4.3.5 Crystallinity Determination 308
4.3.6 Determination of Framework Aluminum from X-Ray Data 310
4.3.7 Determination of the Crystallite Size 314
References 316

5 Shape-Selective Catalysis in Zeolites 327
Jens Weitkamp, Stefan Ernst, and Lothar Puppe
5.1 Scope 327
5.2 Introduction 328
5.2.1 Molecular Dimensions 328
5.2.2 Porous Solids: Crystallographic and Effective Pore Diameter 329
5.2.3 Molecular Sieving 331
5.3 Catalysis and Selectivity .............................................. 333
5.3.1 Incentives for Applying a Catalyst ............................. 333
5.3.2 Intrinsic, Grain and Reactor Selectivity ........................ 334
5.3.3 Shape-Selective Catalysis ......................................... 335
5.4 Internal vs. External Surface of Zeolites ......................... 336
5.4.1 Effect of the Crystallite Size .................................... 336
5.4.2 Experimental Techniques ........................................ 337
5.5 Examples for Shape-Selective Reactions and Models for Rationalizing the Observed Effects ................................. 340
5.5.1 Early Observations ................................................ 340
5.5.2 The Classical Concept After Weisz and Csicsery ............... 341
5.5.2.1 Mass Transfer Effects: Reactant and Product Shape Selectivity ................................................. 341
5.5.2.2 Intrinsic Chemical Effects: Restricted Transition State Shape Selectivity ......................................... 343
5.5.2.3 Discrimination Between Mass Transfer and Intrinsic Chemical Effects .............................................. 344
5.5.3 Other Concepts .................................................... 345
5.5.3.1 The Cage or Window Effect ...................................... 345
5.5.3.2 Molecular Traffic Control ....................................... 346
5.5.3.3 Shape Selectivity at the External Surface: The Nest Effect ............................................................... 347
5.5.3.4 Tip-on Adsorption of Molecules Diffusing Inside the Pore System .................................................... 349
5.5.3.5 Secondary Shape Selectivity/Inverse Shape Selectivity ................................................................. 350
5.6 Tailoring the Shape-Selective Properties of Zeolite Catalysts .... 351
5.6.1 Variation of the Zeolite Type and Isomorphous Substitution .. 351
5.6.2 Variation of the Crystallite Size and Compositional Zoning ..... 353
5.6.3 Ion Exchange and Pore Size Engineering ....................... 354
5.6.4 Selective Poisoning of the External Surface ..................... 355
5.7 Catalytic Test Reactions for Probing the Effective Pore Width of Microporous Materials ............................................. 356
5.7.1 Test Reactions for Acidic Molecular Sieves ..................... 357
5.7.1.1 Competitive Cracking of n-Hexane and 3-Methylpentane (the Constraint Index, CI) ................................. 357
5.7.1.2 Isomerization and Disproportionation of meta-Xylene ... 359
5.7.1.3 Reactions of Other Alkyl Aromatics .......................... 360
5.7.2 Test Reactions for Bifunctional Molecular Sieve Catalysts .... 361
5.7.2.1 Isomerization and Hydrocracking of Long-Chain n-Alkanes (the Refined or Modified Constraint Index, CI * ) .............. 362
5.7.2.2 Hydrocracking of Butylcyclohexane (the Spaciousness Index, SI) ....................................................... 364
5.8 More Recent Directions and Challenges in Shape-Selective Catalysis ......................................................... 365
5.8.1 Trend Towards Bulkier Molecules .................................. 365
5.8.2 Shape-Selective Catalysis on Transition Metals in Zeolites .. 367
5.8.3 Stereoselective Catalysis in Zeolites .............................. 367
5.8.4 Host/Guest Chemistry in Zeolites ................................. 368

References ................................................................. 370
6 Zeolite Effects in Organic Catalysis

Patrick Espeel, Rudy Parton, Helge Toufar, Johan Martens, Wolfgang Hölderich, and Pierre Jacobs

6.1 Reported Catalytic Technology with Zeolites

6.2 Generalities on Catalytic Organic Chemistry with Zeolites

6.3 Established Generalities on Shape Selectivity with Zeolites

6.4 Generation of Active Sites in Zeolites

6.5 The Latest Visions on Zeolite Acidity

6.6 Zeolite Superacidity

6.7 Zeolite Specificity in Organic Catalysis with Functional Molecules: Zeolite Effects

6.7.1 Zeolite Effect I: Shape Selectivity

6.7.1.1 General Procedures

6.7.1.2 Manifestation of Shape Selectivity in Organic Reactions

6.7.2 Zeolite Effect II: Specific Adsorption

6.7.2.1 Diels-Alder Cycloadditions

6.7.2.2 Friedel-Crafts Alkylation

6.7.2.3 Beckmann Rearrangement

6.7.3 Zeolite Effect III: Functional Selectivity

6.7.3.1 Hydrogenation of Unsaturated Aldehydes

6.7.3.2 Preparation of Allyl-Substituted Aromatics by Friedel-Crafts Methods

6.7.4 Zeolite Effect IV: Multifunctional Synergy

6.7.4.1 Hydrogenation + Alkylation

6.7.4.2 Hydrolysis + Hydrogenation

6.7.4.3 Hydration + Dehydrogenation

6.7.4.4 Isomerization + Dehydrogenation

6.7.4.5 Complete Process Changes by Zeolite Catalysts: \( \varepsilon \)-Caprolactam Production

6.7.5 Zeolite Effect V: New Chemistry with Zeolites

6.7.5.1 Pseudo-Solid-Solvent Effect

6.7.5.2 New Complexes Through Encapsulation

6.7.5.3 Ti-Zeolites

6.8 Case Study: Zeolites as Non-Corrosive, Environmentally Friendly Friedel-Crafts Alkylation Catalysts

6.8.1 Introduction

6.8.2 Friedel-Crafts Chemistry over Zeolites from a Historical Perspective

6.8.3 Overview of Friedel-Crafts Literature with Zeolites

6.8.3.1 Group 1 Reactions: Alkylation of Alkyl Aromatics with Olefins

6.8.3.2 Group 2 Reactions: Alkylation of Alkyl Aromatics with Alcohols, Ethers, Aldehydes, Amines etc.

6.8.3.3 Group 3 Reactions: Alkylation of Heteroatom-Substituted Aromatics with Olefins
### 6.8.3.4 Group 4 Reactions: Alkylation of Heteroatom-Substituted Aromatics with Alcohols, Aldehydes, Haloalkanes etc.

## 7 Zeolites as Catalysts in Industrial Processes

### 7.1 Introduction and General Overview

- 438

### 7.1.1 Oil Refining: Basics

- 438

### 7.1.2 The Petrochemical Industry

- 443

### 7.2 Fluid Catalytic Cracking

- 444

#### 7.2.1 Feedstocks and Products

- 446

#### 7.2.2 Application of Fluid Catalytic Cracking (FCC)

- 451

#### 7.2.3 Reaction Mechanism

- 453

#### 7.2.4 The FCC Catalyst

- 455

##### 7.2.4.1 Catalyst Constituents

- 455

##### 7.2.4.2 Effect of Metals on FCC Catalyst Behavior

- 459

##### 7.2.4.3 Novel Zeolites in FCC Catalysts

- 459

##### 7.2.4.4 Physical Catalyst Parameters

- 460

##### 7.2.4.5 Mechanical Aspects

- 461

### 7.3 Hydrocracking

- 461

#### 7.3.1 Process Configurations

- 462

#### 7.3.2 Feedstocks and Products

- 465

#### 7.3.3 Application of Hydrocracking

- 467

#### 7.3.4 Catalytic Aspects

- 469

##### 7.3.4.1 Hydrocracking Mechanism and “Ideal Hydrocracking”

- 469

##### 7.3.4.2 Hydrogenation Function

- 471

##### 7.3.4.3 Acidic Function

- 472

##### 7.3.4.4 Hydrocracking Catalysts

- 477

### 7.4 Catalytic Dewaxing

- 478

### 7.5 Upgrading of Naphtha and Tops

- 480

#### 7.5.1 Cracking of Normal Paraffins

- 481

#### 7.5.2 Desulfurization of Naphtha ex Fluid Catalytic Cracking

- 484

#### 7.5.3 Isomerization of Light Paraffins

- 486

##### 7.5.3.1 Isomerization over Amorphous Catalysts

- 488

##### 7.5.3.2 Isomerization over Zeolitic Catalysts

- 491

#### 7.5.4 Isomerization of Light Olefins

- 492

#### 7.5.5 Paraffin/Olefin Alkylation

- 493

#### 7.5.6 Zeolite-Supported (De)Hydrogenation Catalysts

- 494
