# Table of Contents

## Preface to the Second Edition ..................................................... vii

## Preface to the First Edition ....................................................... ix

## 1 Inverse and Direct Limits
1.1 Inverse or Projective Limits .................................................... 1
1.2 Direct or Inductive Limits ....................................................... 14
1.3 Notes, Comments and Further Reading ......................................... 18

## 2 Profinite Groups
2.1 Pro-$C$ Groups ................................................................. 19
2.2 Basic Properties of Pro-$C$ Groups ........................................... 28
   Existence of Sections ............................................................... 29
   Exactness of Inverse Limits of Profinite Groups ............................. 31
2.3 The Order of a Profinite Group and Sylow Subgroups ...................... 32
2.4 Generators ....................................................................... 42
2.5 Finitely Generated Profinite Groups ......................................... 44
2.6 Generators and Chains of Subgroups ......................................... 47
2.7 Procyclic Groups ................................................................. 51
2.8 The Frattini Subgroup of a Profinite Group .................................. 52
2.9 Pontryagin Duality for Profinite Groups ..................................... 58
2.10 Pullbacks and Pushouts ........................................................ 66
2.11 Profinite Groups as Galois Groups .......................................... 68
2.12 Notes, Comments and Further Reading ....................................... 72
   Analytic Pro-$p$ Groups ........................................................... 73
   Number of Generators of a Group and of Its Profinite Completion ....... 74

## 3 Free Profinite Groups
3.1 Profinite Topologies ............................................................. 75
3.2 The Pro-$C$ Completion .......................................................... 78
   The Completion Functor ........................................................... 81
3.3 Free Pro-$C$ Groups ............................................................... 85
   Free Pro-$C$ Group on a Set Converging to 1 ................................ 88

### Table of Contents

**6.6** $H^n(G, A)$ as Derived Functors on $\text{DMod}(G)$ .......................... 220

**6.7** Special Mappings .................................................. 224
  - The Restriction Map in Cohomology .............................. 224
  - The Corestriction Map in Cohomology ............................ 225
  - The Corestriction Map in Homology .............................. 229
  - The Restriction Map in Homology .............................. 229

**6.8** Homology and Cohomology Groups in Low Dimensions .... 231
  - $H^2(G, A)$ and Extensions of Profinite Groups ............. 233

**6.9** Extensions of Profinite Groups with Abelian Kernel .... 238

**6.10** Induced and Coinduced Modules ............................... 242

**6.11** The Induced Module $\text{Ind}^G_H(B)$ for $H$ Open .......... 247

**6.12** Notes, Comments and Further Reading ....................... 249

**7** Cohomological Dimension

**7.1** Basic Properties of Dimension ................................ 251

**7.2** The Lyndon-Hochschild-Serre Spectral Sequence ........... 256

**7.3** Cohomological Dimension of Subgroups ..................... 261

**7.4** Cohomological Dimension of Normal Subgroups and Quotients .................................................. 266

**7.5** Groups $G$ with $cd_p(G) \leq 1$ ................................. 268

**7.6** Projective Profinite Groups .................................... 271

**7.7** Free Pro-$p$ Groups and Cohomological Dimension ........ 275

**7.8** Generators and Relators for Pro-$p$ Groups ................. 278

**7.9** Cup Products .................................................... 282

**7.10** Notes, Comments and Further Reading ....................... 288
  - Pro-$p$ Groups $G$ with one Defining Relator ............. 290
  - Poincaré Groups .................................................. 290

**8** Normal Subgroups of Free Pro-$C$ Groups

**8.1** Normal Subgroup Generated by a Subset of a Basis ......... 294

**8.2** The $S$-rank ..................................................... 296

**8.3** Accessible Subgroups ........................................... 302

**8.4** Accessible Subgroups $H$ with $w_0(F/H) < \text{rank}(F)$ ... 306

**8.5** Homogeneous Pro-$C$ Groups .................................. 313

**8.6** Normal Subgroups ................................................. 326

**8.7** Proper Open Subgroups of Normal Subgroups ............... 335

**8.8** The Congruence Kernel of $\text{SL}_2(\mathbb{Z})$ ................. 340

**8.9** Sufficient Conditions for Freeness ............................ 341

**8.10** Characteristic Subgroups of Free Pro-$C$ Groups ......... 348

**8.11** Notes, Comments and Further Reading ....................... 351
# Table of Contents

9 **Free Constructions of Profinite Groups**
9.1 Free Pro-$C$ Products ........................................ 353
9.2 Amalgamated Free Pro-$C$ Products ........................ 367
9.3 Cohomological Characterizations of Amalgamated Products . 374
9.4 Pro-$C$ HNN-extensions ........................................ 382
9.5 Notes, Comments and Further Reading ........................ 388

Open Questions ......................................................393

Appendix A: **Spectral Sequences**
A.1 Spectral Sequences ........................................... 397
A.2 Positive Spectral Sequences ................................... 399
   The Base Terms ............................................... 400
   The Fiber Terms ............................................. 400
A.3 Spectral Sequence of a Filtered Complex .................... 402
A.4 Spectral Sequences of a Double Complex .................... 405
A.5 Notes, Comments and Further Reading ........................ 406

Appendix B: **A Different Characterization of Free Profinite Groups**
B.1 Free vs Projective Profinite Groups .......................... 407
B.2 Notes, Comments and Further Reading ........................ 408

Appendix C: **Presentations of Profinite Groups**
C.1 Presentations .................................................. 409
C.2 Relation Modules ............................................. 412
C.3 Notes, Comments and Further Reading ........................ 416

Appendix D: **Wreath Products and Some Subgroup Theorems**
D.1 Permutational Wreath Products ............................... 419
D.2 The Nielsen-Schreier Theorem for Free Pro-$C$ Groups ..... 423
D.3 The Kurosh Subgroup Theorem for Profinite Groups ......... 425
   Kurosh Systems .............................................. 428
D.4 Subgroups of Projective Groups ............................... 432
D.5 Quasifree Profinite Groups ................................... 434
D.6 Notes, Comments and Further Reading ........................ 438

Bibliography ..................................................................439

Index of Symbols .....................................................451

Index of Authors .....................................................455

Index of Terms ........................................................459
Profinite Groups
