Contents

Part I  Equations of Motion and Basic Ideas on Discretizations

1  Some Basic Dynamics Relevant to the Design of Atmospheric Model Dynamical Cores ................................. 3
   John Thuburn

2  Waves, Hyperbolicity and Characteristics ................................. 29
   Joseph Tribbia and Roger Temam

3  Horizontal Discretizations: Some Basic Ideas ............................. 43
   John Thuburn

4  Vertical Discretizations: Some Basic Ideas ............................. 59
   John Thuburn

5  Time Discretization: Some Basic Approaches ............................. 75
   Dale R. Durran

6  Stabilizing Fast Waves ..........................................................105
   Dale R. Durran

Part II  Conservation Laws, Finite-Volume Methods, Remapping Techniques and Spherical Grids

7  Momentum, Vorticity and Transport: Considerations in the Design of a Finite-Volume Dynamical Core  ...........................143
   Todd D. Ringler

8  Atmospheric Transport Schemes: Desirable Properties and a Semi-Lagrangian View on Finite-Volume Discretizations .....................................185
   Peter H. Lauritzen, Paul A. Ullrich, and Ramachandran D. Nair
9 Emerging Numerical Methods for Atmospheric Modeling ..........251
   Ramachandran D. Nair, Michael N. Levy,
   and Peter H. Lauritzen

10 Voronoi Tessellations and Their Application to Climate
    and Global Modeling .........................................................313
   Lili Ju, Todd Ringler, and Max Gunzburger

Part III Practical Considerations for Dynamical Cores
in Weather and Climate Models

   John Thuburn

12 Conservation of Mass and Energy for the Moist
    Atmospheric Primitive Equations on Unstructured Grids .............357
   Mark A. Taylor

13 The Pros and Cons of Diffusion, Filters and Fixers
    in Atmospheric General Circulation Models ..........................381
   Christiane Jablonowski and David L. Williamson

14 Kinetic Energy Spectra and Model Filters .................................495
   William C. Skamarock

15 A Perspective on the Role of the Dynamical Core
    in the Development of Weather and Climate Models .................513
   Richard B. Rood

16 Refactoring Scientific Applications for Massive
    Parallelism .................................................................539
   John M. Dennis and Richard D. Loft
Numerical Techniques for Global Atmospheric Models
Lauritzen, P.H.; Jablonowski, C.; Taylor, M.A.; Nair, R.D. (Eds.)
2011, XVI, 564 p., Hardcover
ISBN: 978-3-642-11639-1
