Contents

Preface: What is Mathematics? ........................................ vii
Welcome! ........................................................................ ix
Structure and Randomness in the Prime Numbers .......... 1
Terence Tao
How to Solve a Diophantine Equation ........................ 9
Michael Stoll
From Sex to Quadratic Forms ................................. 21
Simon Norton
Small Divisors: Number Theory in Dynamical Systems ...... 43
Jean-Christophe Yoccoz
How do IMO Problems Compare with Research Problems?
Ramsey Theory as a Case Study ................................. 55
W. Timothy Gowers
How do Research Problems Compare with IMO Problems?
A Walk Around Games ...................................... 71
Stanislav Smirnov
Graph Theory Over 45 Years ....................................... 85
László Lovász
Communication Complexity .................................. 97
Alexander A. Razborov
Ten Digit Problems ........................................... 119
Lloyd N. Trefethen
The Ever-Elusive Blowup in the Mathematical Description of Fluids ...................................................... 137
Robert M. Kerr and Marcel Oliver

About the Hardy Inequality .................................. 165
Nader Masmoudi

The Lion and the Christian, and Other Pursuit and Evasion Games ........................................................ 181
Béla Bollobás

Three Mathematics Competitions ............................ 195
Günter M. Ziegler

Complex Dynamics, the Mandelbrot Set, and Newton’s Method — or: On Useless and Useful Mathematics ........... 207
Dierk Schleicher
An Invitation to Mathematics
From Competitions to Research
Schleicher, D.; Lackmann, M. (Eds.)
2011, XIV, 220 p. 56 illus., 31 illus. in color., Softcover
ISBN: 978-3-642-19532-7
