## Contents

1 **Introduction** ........................................ 1  
   1.1 Single-Channel Speech Enhancement in the STFT Domain:  
       A Brief Review ........................................ 3  
   1.2 Interframe Correlation .................................. 5  
   1.3 Benefit of Using Multiple Microphones ................. 7  
   1.4 Interband Correlation .................................. 9  
   1.5 Organization of the Work ................................. 10  
   References ................................................. 11  

2 **Single-Channel Speech Enhancement with a Gain** ............. 15  
   2.1 Signal Model ........................................... 15  
   2.2 Microphone Signal Processing with a Gain .................. 16  
   2.3 Performance Measures .................................... 17  
       2.3.1 Noise Reduction .................................... 17  
       2.3.2 Speech Distortion ................................... 19  
       2.3.3 Mean-Square Error Criterion ......................... 20  
   2.4 Optimal Gains ........................................... 23  
       2.4.1 Wiener .............................................. 23  
       2.4.2 Tradeoff ............................................ 25  
       2.4.3 Maximum Signal-to-Noise Ratio ....................... 27  
   References ................................................. 28  

3 **Single-Channel Speech Enhancement with a Filter** ............ 29  
   3.1 Microphone Signal Processing with a Filter ............... 29  
   3.2 Performance Measures .................................... 32  
       3.2.1 Noise Reduction .................................... 32  
       3.2.2 Speech Distortion ................................... 35  
       3.2.3 MSE Criterion ....................................... 36  
   3.3 Optimal Filters .......................................... 38
4 Multichannel Speech Enhancement with Gains .......................... 51
   4.1 Signal Model ........................................................................ 51
   4.2 Array Signal Processing with Gains ..................................... 53
   4.3 Performance Measures .......................................................... 55
      4.3.1 Noise Reduction ........................................................... 55
      4.3.2 Speech Distortion .......................................................... 57
      4.3.3 Other Measures ............................................................ 58
      4.3.4 MSE Criterion .............................................................. 61
   4.4 Optimal Gains ....................................................................... 63
      4.4.1 Maximum SNR .............................................................. 63
      4.4.2 Wiener ........................................................................ 64
      4.4.3 MVDR ........................................................................ 67
      4.4.4 Spatial Prediction ........................................................... 69
      4.4.5 Tradeoff ...................................................................... 69
      4.4.6 LCMV ........................................................................ 72
   References ................................................................................. 74

5 Multichannel Speech Enhancement with Filters ............................ 77
   5.1 Array Signal Processing with Filters ..................................... 77
   5.2 Performance Measures .......................................................... 80
      5.2.1 Noise Reduction ........................................................... 81
      5.2.2 Speech Distortion .......................................................... 82
      5.2.3 MSE Criterion .............................................................. 83
   5.3 Optimal Filters ...................................................................... 85
      5.3.1 Maximum SNR .............................................................. 85
      5.3.2 Wiener ........................................................................ 86
      5.3.3 MVDR ........................................................................ 88
      5.3.4 Spatio-Temporal Prediction ............................................ 89
      5.3.5 Tradeoff ...................................................................... 90
      5.3.6 LCMV ........................................................................ 91
   References ................................................................................. 92

6 The Bifrequency Spectrum in Speech Enhancement ...................... 93
   6.1 Problem Formulation ............................................................. 93
   6.2 Performance Measures .......................................................... 95
      6.2.1 Noise Reduction ........................................................... 95
      6.2.2 Speech Distortion .......................................................... 96
