## Part I Continuous Wave Communication and Analog Signal Conditioning

<b>2</b>	<b>Fourier Series</b>	23
2.1	Introduction	23
2.2	Statement and Interpretation	24
2.3	Fourier Coefficients	26
2.3.1	Component of a Vector	26

- 2.3.2 Component of a Signal . . . . . 28
- 2.3.3 Coefficients of Trigonometric Fourier Series . . . . . 29
- 2.3.4 Physical Existences of the Coefficients . . . . . 34
- 2.4 Even and Odd Symmetry. . . . . 35
- 2.5 Compact Fourier Series. . . . . 38
- 2.6 Dirichlet Conditions . . . . . 41
- 2.7 Exponential Fourier Series. . . . . 42
- 2.8 Parseval’s Theorem for Power . . . . . 44
- 2.9 Phase Congruency: Application of Fourier Series in 1D  
and 2D Signal Processing (Image Processing) . . . . . 45
- References . . . . . 50
  
- 3 Fourier Transform . . . . . 51**
  - 3.1 Introduction . . . . . 51
  - 3.2 Mathematical Interpretation . . . . . 52
  - 3.3 Significance of Oddness and Evenness in Complex Plane . . . . . 55
  - 3.4 Cosine and Sine Transform . . . . . 57
    - 3.4.1 Interpretation of the Formula . . . . . 61
  - 3.5 Properties of Fourier Transform . . . . . 62
    - 3.5.1 Time–Frequency Duality . . . . . 63
    - 3.5.2 Scaling Property . . . . . 63
    - 3.5.3 Time Shifting Property . . . . . 65
    - 3.5.4 Frequency Shifting Property. . . . . 69
    - 3.5.5 Transformed Convolution Property . . . . . 70
  - 3.6 System Realization: Ideal and Practical Filter . . . . . 73
    - 3.6.1 System Causality . . . . . 73
    - 3.6.2 Causality of Ideal Filter. . . . . 74
  - 3.7 Parseval’s Theorem for Energy . . . . . 75
  - References . . . . . 76
  
- 4 Amplitude Modulation . . . . . 77**
  - 4.1 Introduction . . . . . 77
  - 4.2 Modulation and Its Measure: Global Definitions . . . . . 78
    - 4.2.1 Modulation . . . . . 78
    - 4.2.2 Modulation Index . . . . . 79
  - 4.3 Math Model of AM . . . . . 80
  - 4.4 Transmission Power and Transmission Efficiency. . . . . 82
  - 4.5 Double Side Band Suppressed Carrier (DSB-SC)  
Modulation . . . . . 83
  - 4.6 Balanced Modulator . . . . . 85
    - 4.6.1 Non-linear Amplifier. . . . . 85
    - 4.6.2 Configuration 1 . . . . . 86
    - 4.6.3 Configuration 2 . . . . . 88
    - 4.6.4 Why “Balanced” Modulator?. . . . . 90

- 4.7 Ring Modulator . . . . . 90
- 4.8 Phasor Diagram . . . . . 93
  - 4.8.1 Observed Properties of AM . . . . . 95
- 4.9 Envelope Detector . . . . . 95
- 4.10 Quadrature Amplitude Modulation . . . . . 98
  - 4.10.1 QAM Transmitter . . . . . 98
  - 4.10.2 QAM Receiver . . . . . 99
- 4.11 Radio Receivers . . . . . 100
  - 4.11.1 Tuned Radio Frequency (TRF) Receiver . . . . . 100
  - 4.11.2 Super Heterodyne Receiver . . . . . 102
  - 4.11.3 Receiver Characteristics . . . . . 104
  - 4.11.4 Tuned Circuit . . . . . 106
  - 4.11.5 Image Frequency . . . . . 108
- 4.12 MATLAB Codes . . . . . 110
  - 4.12.1 AM . . . . . 110
  - 4.12.2 DSB-SC . . . . . 111
  - 4.12.3 Ring Modulator . . . . . 113
- References . . . . . 114
  
- 5 Angle Modulation Technology . . . . . 115**
  - 5.1 Introduction . . . . . 115
  - 5.2 Concept of Instantaneous Frequency . . . . . 115
  - 5.3 Mathematical Model . . . . . 116
  - 5.4 FM and PM are Interchangeable . . . . . 118
    - 5.4.1 Example 1 . . . . . 119
    - 5.4.2 Example 2 . . . . . 121
  - 5.5 Modulation Index for FM and PM . . . . . 124
  - 5.6 Bandwidth of FM . . . . . 125
  - 5.7 Phasor Diagram . . . . . 128
    - 5.7.1 Observed Properties of NBFM . . . . . 130
  - 5.8 NBFM and NBPM Generation: Indirect Method . . . . . 131
  - 5.9 Wide Band FM Generation: Indirect Method of Armstrong . . . . . 132
  - 5.10 Direct Method of FM Generation: Using VCO . . . . . 133
  - 5.11 Indirect Method of FM Demodulation . . . . . 135
    - 5.11.1 Slope Detector . . . . . 135
    - 5.11.2 Dual Slope Detector . . . . . 136
  - 5.12 Stereophonic FM . . . . . 137
  - 5.13 Matlab Programs . . . . . 141
    - 5.13.1 Bessel Function of First Kind . . . . . 141
    - 5.13.2 FM and PM Signal Generation . . . . . 142
- References . . . . . 143

## Part II Discrete Signal Conditioning: 1D & 2D

<b>6</b>	<b>Discrete Time Transformations: DTFS and DTFT</b> . . . . .	147
6.1	Introduction . . . . .	147
6.2	Concept of Sampling . . . . .	147
6.2.1	Sampling Theorem . . . . .	149
6.3	Aliasing. . . . .	152
6.4	Discrete Time Fourier Series . . . . .	153
6.5	Discrete Time Fourier Transform . . . . .	155
6.6	MATLAB Programs . . . . .	158
6.6.1	Aliasing. . . . .	158
	References . . . . .	158
<b>7</b>	<b>Discrete Fourier Transform</b> . . . . .	159
7.1	Introduction . . . . .	159
7.2	The DFT Algorithm . . . . .	159
7.3	Twiddle Factor. . . . .	161
7.3.1	Properties . . . . .	164
7.4	Properties of DFT. . . . .	169
7.4.1	Periodicity . . . . .	170
7.4.2	Linearity . . . . .	170
7.4.3	Circular Shift of a Sequence . . . . .	170
7.4.4	Time Reversal of a Sequence. . . . .	173
7.4.5	Circular Frequency Shift . . . . .	174
7.4.6	Complex Conjugate Property . . . . .	174
7.4.7	Circular Convolution. . . . .	175
7.4.8	Circular Correlation . . . . .	175
7.4.9	Multiplication Between Two Sequences . . . . .	176
7.4.10	Parseval's Theorem. . . . .	176
7.6	Two Dimensional (2D) DFT . . . . .	176
7.5.1	Physical Interpretation: 2D-FT . . . . .	179
7.5.2	Space-Frequency Expansion-Contraction in Image . . . . .	181
7.6	Case Studies . . . . .	184
7.6.1	Importance of Phase Over Amplitude in DFT Spectrum . . . . .	184
7.6.2	Image Filtering. . . . .	185
7.7	Computational Complexity . . . . .	186
7.7.1	Considering Real and Complex Operations . . . . .	187
7.7.2	Considering Only Complex Operations . . . . .	187
7.8	MATLAB Codes . . . . .	188
7.8.1	Concept of Frequency in Two Dimensional Signal (Image) . . . . .	188

7.8.2	Importance of Phase Over Amplitude in DFT Spectrum . . . . .	189
7.8.3	Image Filtering. . . . .	190
References	. . . . .	192
<b>8</b>	<b>Fast Fourier Transform . . . . .</b>	<b>193</b>
8.1	Introduction . . . . .	193
8.2	The FFT Algorithm: Radix 2—Decimation is Time . . . . .	193
8.2.1	Bit Reversal. . . . .	195
8.2.2	Steps of Doing Radix-2 DIT-FFT. . . . .	197
8.3	Decimation in Frequency FFT (DIF-FFT) Algorithm . . . . .	198
8.3.1	Steps of Doing Radix-2 DIF-FFT. . . . .	199
8.4	Computational Complexity . . . . .	203
8.4.1	Number of Complex Multiplication . . . . .	203
8.4.2	Number of Complex Addition . . . . .	204
8.5	Circular Convolution. . . . .	204
8.5.1	Concentric Circle Method . . . . .	205
8.5.2	Matrix Multiplication Method . . . . .	205
8.6	Case Studies . . . . .	208
8.6.1	FFT Over FFT. . . . .	208
8.6.2	Multiplication Using FFT . . . . .	213
8.7	MATLAB Codes . . . . .	214
8.7.1	FFT Over FFT. . . . .	214
8.7.2	Multiplication Using FFT . . . . .	215
References	. . . . .	215
<b>9</b>	<b>Z-Transform . . . . .</b>	<b>217</b>
9.1	Introduction . . . . .	217
9.2	Laplace Transform and S-Plane . . . . .	217
9.2.1	Stability Criteria S-Plane. . . . .	219
9.3	Algorithm of Z-Transform. . . . .	220
9.3.1	Physical Significance of Z-Transform. . . . .	222
9.3.2	Utility of Z-Transform . . . . .	222
9.4	Region of Convergence (RoC) and Its Properties . . . . .	223
9.5	RoC of Finite Duration Sequence. . . . .	223
9.5.1	Causal Sequence. . . . .	223
9.5.2	Anti-Causal Sequence . . . . .	224
9.5.3	Double Sided Sequence. . . . .	225
9.6	Properties of Z-Transform . . . . .	226
9.6.1	Intersection of RoC. . . . .	226
9.6.2	Linearity . . . . .	227
9.6.3	Time Shift or Translation . . . . .	228
9.6.4	Multiplication by an Exponential Sequence . . . . .	229

- 9.6.5 Time Reversal . . . . . 230
- 9.6.6 Differentiation of  $X(z)$  . . . . . 231
- 9.7 System Representation by Z-Transform . . . . . 232
  - 9.7.1 Solution of Difference Equations Using Z-Transform . . . . . 233
- 9.8 Poles and Zeros . . . . . 234
- 9.9 Stability Criteria . . . . . 235
  - 9.9.1 Stability Theorem . . . . . 235
- 9.10 Bounded Input Bounded Output Stability . . . . . 236
- 9.11 Relationship Between S and Z-Plane . . . . . 238
- 9.12 Inverse Z-Transform . . . . . 239
  - 9.12.1 Long Division Method . . . . . 239
  - 9.12.2 Convolution Method . . . . . 241
- References . . . . . 242
