Contents

1 Bone and Cartilage Tissue Engineering ............................................ 1
   1.1 Bone ................................................................. 1
       1.1.1 Bone Components and Bone Formation ...................... 1
       1.1.2 Medical Need for Bone Repair
           and Current Treatments .................................. 2
       1.1.3 Bone Cell Types and Bone Healing ...................... 3
   1.2 Articular Cartilage ................................................... 5
       1.2.1 Cartilage Types .......................................... 5
       1.2.2 Cells and Components in Articular Cartilages .......... 5
       1.2.3 Medical Need for Articular Cartilage
           Repair and Current Treatments ......................... 6
       1.2.4 Cartilage Formation/Hypertrophy
           and Repair Process .................................. 6
   1.3 Tissue Engineering .................................................. 7
       1.3.1 Cells ...................................................... 8
       1.3.2 Scaffolds ............................................... 8
       1.3.3 Biological Factors .................................... 9
   References ........................................................... 11

2 Viral Gene Therapy Vectors .................................................. 17
   2.1 Gene Therapy .................................................... 17
   2.2 Vectors for Gene Delivery ........................................ 18
       2.2.1 Nonviral vs. Viral Vectors ............................ 18
       2.2.2 Retrovirus/Lentivirus ................................ 19
       2.2.3 Adenovirus ............................................. 21
       2.2.4 AAV .................................................... 22
       2.2.5 Baculovirus ........................................... 24
   References ........................................................... 25
### 3 Gene Therapy for Bone Tissue Engineering

3.1 In Vivo Gene Delivery-Based Bone Engineering
   - 3.1.1 Direct Injection
   - 3.1.2 Gene Activated Matrix (GAM)

3.2 Ex Vivo Gene Delivery-Based Bone Formation
   - 3.2.1 Systemic Delivery
   - 3.2.2 Local Delivery

References

### 4 Gene Therapy for Cartilage Tissue Engineering

4.1 Gene Products for Promoting Chondrogenesis

4.2 In Vivo Gene Delivery-Based Cartilage Engineering
   - 4.2.1 Strategies to Suppress Cartilage Degeneration
   - 4.2.2 Strategies to Promote Cartilage Formation
   - 4.2.3 Problems in Direct Gene Transfer

4.3 Ex Vivo Gene Therapy
   - 4.3.1 Gene Transfer to Chondrocytes
   - 4.3.2 Gene Transfer to Chondroprogenitor Cells
   - 4.3.3 Gene Transfer to Mesenchymal Stem Cells (MSCs)
   - 4.3.4 Gene Transfer to ASCs
   - 4.3.5 Gene Transfer via Gene Activated Matrix (GAM)
   - 4.3.6 Comparison of Cell Sources

References

### 5 Conclusions and Perspectives

5.1 Concluding Remarks on Gene Therapy in Bone Tissue Engineering
   - 5.1.1 Immune Responses Against Viral Vectors/Transgenes
   - 5.1.2 Roles of Host Immunity on Bone Healing
   - 5.1.3 Genotoxicity

5.2 Concluding Remarks on Gene Therapy in Cartilage Tissue Engineering

5.3 Future Perspectives
