List of Figures xi

List of Tables xv

List of Abbreviations xvii

List of Symbols xix

1. Introduction 1
   1.1. Motivating Case Study .......................... 5
   1.2. The Demand Fulfillment Problem in Multi-Stage Customer Hierarchies 8
      1.2.1. Heterogeneous Customer Segments .................. 8
      1.2.2. Multi-Stage Customer Hierarchies .................. 10
      1.2.3. Iterative Disaggregation and Allocation in Customer Hierarchies 11
   1.3. Problem Focus and Research Questions .......................... 13
   1.4. Overview of Approach .................................. 17

2. Supply Chain Planning and Demand Fulfillment 21
   2.1. Supply Chain Planning .................................. 21
      2.1.1. Supply Chain Management ......................... 22
      2.1.2. Hierarchical Planning .............................. 25
      2.1.3. Interrelations between Planning Tasks .............. 33
      2.1.4. The Position of the Customer Order Decoupling Point 37
      2.1.5. Advanced Planning Systems ......................... 42
   2.2. Demand Planning ........................................ 46
      2.2.1. Objectives and Planning Tasks ........................ 47
      2.2.2. Demand Planning Structures and Forecasting Hierarchies 50
      2.2.3. Demand Planning Processes and Forecasting Procedures 51
      2.2.4. Demand Planning Controlling and Forecast Error Measures 58
      2.2.5. Hierarchical Forecasting .......................... 63
   2.3. Master Planning .......................................... 77
      2.3.1. Objectives and Planning Tasks ...................... 77
      2.3.2. Basic Master Planning Model ...................... 79
   2.4. Demand Fulfillment ....................................... 81
      2.4.1. Objectives and Planning Tasks ...................... 81
      2.4.2. Types of Demand Fulfillment Systems ................ 86
      2.4.3. Basic Models for Demand Fulfillment ................ 89
      2.4.4. State of the Art: Demand Fulfillment in MTS Environments 98
   2.5. Conclusions: Allocation Problems in Supply Chain Planning ........... 105
### 3. Multi-Stage Customer Hierarchies

#### 3.1. Formal Hierarchies

- **3.1.1. Trees and Hierarchies**
- **3.1.2. Aggregation and Disaggregation**

#### 3.2. Decision-Making in Hierarchies

#### 3.3. Customer Hierarchies and Hierarchical Sales Organizations

- **3.3.1. Customer Segmentation and Customer Profitability**
- **3.3.2. A Formal Model of Customer Hierarchies**
- **3.3.3. Hierarchical Sales Organizations**
- **3.3.4. Customer Hierarchies in the Context of the Schneeweiss Framework**

#### 3.4. Forecast Misrepresentation in Customer Hierarchies

- **3.4.1. Sales Forecasting and Agency Problems**
- **3.4.2. Compensation Schemes for Demand-Constrained Supply Chains**
- **3.4.3. Compensation Schemes for Supply-Constrained Supply Chains**
- **3.4.4. Forecast Misrepresentations: Empirical and Experimental Evidence**
- **3.4.5. Application to Customer Hierarchies**

#### 3.5. Measures of Heterogeneity in Customer Hierarchies

- **3.5.1. Inequality and Heterogeneity Measurement**
- **3.5.2. Standard Heterogeneity Measures**
- **3.5.3. Generalized Entropy Inequality Measures and Theil’s Index**
- **3.5.4. Comparison of Heterogeneity Measures**

### 4. Allocation Planning and Disaggregation in Customer Hierarchies

#### 4.1. Notation and Formal Model

#### 4.2. Existing Quantity-Based Allocation Schemes

- **4.2.1. Type 1: Based on Demand, Pro Rata**
- **4.2.2. Type 2: Based on Another Key Figure, Pro Rata**
- **4.2.3. Type 3: Based on Demand, Disproportionally**
- **4.2.4. Type 4: Based on Another Key Figure, Disproportionally**
- **4.2.5. Stochastic or Unknown Supply Quantities**

#### 4.3. Basic Profit-Based Allocation Schemes

- **4.3.1. Optimal Central Allocation (OCA)**
- **4.3.2. Optimal Decentral Allocation (ODA)**
- **4.3.3. Intuitive Decentral Allocation (IDA)**

#### 4.4. A Novel Allocation Scheme for Decentral Planners (ADA)

- **4.4.1. Basic Idea of the New Scheme**
- **4.4.2. Approximation of Total Profit in a Subtree**
- **4.4.3. Parameterization of the Total Profit Approximation**
- **4.4.4. Basic Solution Approach**
- **4.4.5. Alternative Solution Approach**

#### 4.5. Numerical Experiments

- **4.5.1. Simulation Environment**
- **4.5.2. Base Case**
- **4.5.3. Different Levels of Scarcity**
- **4.5.4. Different Hierarchy Sizes**
- **4.5.5. Different Levels of Customer Heterogeneity**
4.5.6. Different Allocation Schemes at Different Hierarchy Levels 255
4.5.7. Summary and Discussion 261

5. Model Extensions: Forecast Errors and Enhanced Consumption Planning 263
5.1. Forecast Errors 264
5.1.1. Forecast Error Model 265
5.1.2. Numerical Experiments 265
5.2. Enhanced Quota Consumption Rules 279
5.2.1. Enhanced Consumption Rules in Customer Hierarchies 281
5.2.2. Numerical Experiments 288
5.3. Quota Retention and Virtual Safety Stocks 299
5.3.1. Stock Retention in Multi-Echelon Inventory Systems 300
5.3.2. Virtual Safety Stocks in Multi-Stage Customer Hierarchies 303
5.3.3. Numerical Experiments 305

6. Summary and Conclusions 315
6.1. Summary 315
6.2. Managerial Implications 322
6.3. Directions for Further Research 324

A. Appendix 329
A.1. The Theil Index at Aggregate Levels in Multi-Stage Customer Hierarchies 329
A.2. The Relationship Between Theil’s Index and the Lorenz Curve 331
A.3. Proof of Lemma 6 338
A.4. Proofs of Lemmas 9 and 10 340
A.4.1. Existence of a Unique Solution 340
A.4.2. Closed-Form Solution Based on Cramer’s Rule 343
A.5. Comparative Statics of the ADA-Based Allocation 352
