2 Main Methods .......................................................... 17
  2.1 Life-Cycle Assessment (LCA) ......................................... 17
    2.1.1 Background of LCA ............................................... 17
    2.1.2 Methodology of LCA .............................................. 19
    2.1.3 LCA-Based Integrated Evaluation Indices ..................... 20
  2.2 Economic Assessment .................................................. 22
    2.2.1 Cost–Benefit Analysis .......................................... 22
    2.2.2 Data Envelopment Analysis (DEA) ................................ 23
  2.3 Emergy Analysis ....................................................... 25
3 Four Typical Biogas Systems in China

3.1 “Six-in-One” Biogas System (SIOBS)
   3.1.1 Biogas Plant Construction Stage
   3.1.2 Biogas Plant Maintenance Stage
   3.1.3 Feedstock Supply Stage
   3.1.4 Biogas Energy Utilization Stage
   3.1.5 Digestate Processing Stage

3.2 Biogas-Persimmon Cultivation and Processing System (BCPS)
   3.2.1 Biogas Infrastructure (Fraction I)
   3.2.2 Biogas System Operation (Fraction II)
   3.2.3 Digestate Reuse for Persimmon Cultivation (Fraction III)
   3.2.4 Biogas Utilization for Persimmon Processing (Fraction IV)

3.3 Wastewater Treatment Plants (WWTPs)
   3.3.1 WWTP Construction Stage
   3.3.2 WWTP Operation and Maintenance Stage
   3.3.3 Biogas–Sludge Use Stage

3.4 “Three-in-One” Biogas Project

4 Environment Emissions of Household Biogas Project

4.1 Biogas-Persimmon Cultivation and Processing System (BCPS)
   4.1.1 Emissions Inventory
   4.1.2 GHG Emissions Mitigation

4.2 Wastewater Treatment Plants (WWTPs)
   4.2.1 Emissions Inventory
   4.2.2 Environmental Impact Mitigation

4.3 ‘Six in One’ Biogas System (SIOBS)
   4.3.1 System Inventory
   4.3.2 Overall Environmental Evaluation
   4.3.3 Sensitivity Analysis
   4.3.4 Digestate Reuse
5 Energy Evaluation of Household Biogas Project

5.1 Life-Cycle Energy Evaluation

5.2 Case Study of BCPS

5.3 “Six in One” Biogas System (SIOBS)

5.3.1 Overall Energy Evaluation

5.3.2 Sensitivity Analysis

5.3.3 Environmental Benefit Under Different Scenarios

5.3.4 Digestate Reuse

5.4 Wastewater Treatment Plants (WWTPs)

5.4.1 Energy Input–Output Analysis

5.4.2 System Energy Production

5.4.3 Sensitivity Analysis
