**Part I  An Introduction to Nonstandard Analysis**

### 1 Simple Nonstandard Analysis and Applications  
Peter A. Loeb  
1.1 Introduction  
1.2 A Simple Construction of a Nonstandard Number System  
1.3 A Simple Language  
1.4 Interpretation of the Language $L$  
1.5 Transfer Principle for $^*\mathbb{R}$  
1.6 The Nonstandard Real Numbers  
1.7 Sequences  
1.8 Topology on the Reals  
1.9 Limits and Continuity  
1.10 Differentiation  
1.11 Riemann Integration  
References

### 2 An Introduction to General Nonstandard Analysis  
Peter A. Loeb  
2.1 Superstructures  
2.2 Language for Superstructures  
2.3 Interpretation of the Language for Superstructures  
2.4 Monomorphisms and the Transfer Principle  
2.5 Ultrapower Construction of Superstructures and Monomorphisms  
2.6 Special Index Sets Yielding Enlargements  
2.7 A Result in Infinite Graph Theory  
2.8 Internal and External Sets  
2.9 Saturation  
References

Part II Functional Analysis

4 Banach Spaces and Linear Operators ............................... 107
   Manfred P.H. Wolff
   4.1 Introduction ...................................................... 107
   4.2 Basic Nonstandard Analysis of Normed Spaces ................ 108
      4.2.1 Internal Normed Spaces and Their Nonstandard Hull ........ 108
      4.2.2 Standard Continuous and Internal S–continuous Linear Operators .... 114
      4.2.3 Special Banach Spaces and Their Nonstandard Hulls ......... 116
      4.2.4 Notes ...................................................... 119
   4.3 Advanced Theory of Banach Spaces ............................. 119
      4.3.1 A Brief Excursion to Locally Convex Vector Spaces ........ 119
      4.3.2 General Banach Spaces .................................... 124
      4.3.3 Banach Lattices .......................................... 130
      4.3.4 Notes ...................................................... 133
   4.4 Elementary Theory of Linear Operators ......................... 133
      4.4.1 Compact Operators ........................................ 133
      4.4.2 Fredholm Operators ...................................... 135
      4.4.3 Notes ...................................................... 137
   4.5 Spectral Theory of Operators .................................... 137
      4.5.1 Basic Definitions and Facts ................................ 137
6.3.2 $\mu_L$-integrability and $S_{\mu}$-integrability .......................... 200
6.3.3 Integrable Functions defined on $\mathbb{N}^n \times \Lambda \times \lbrack 0, \infty \rbrack^m$ 205
6.3.4 Standard Part of the Conditional Expectation .................. 210
6.3.5 Characterization of $S$-integrability ............................ 211
6.3.6 Keisler’s Fubini Theorem ....................................... 213
6.3.7 Hyperfinite Representation of the Tensor Product ........... 217
6.3.8 On Symmetric Functions ....................................... 220

6.4 Internal and Standard Martingales .................................. 222
  6.4.1 Stopping Times and Doob’s Upcrossing Result ............... 223
  6.4.2 The Maximum Inequality ....................................... 224
  6.4.3 Doob’s Inequality ........................................... 224
  6.4.4 The Burkholder Davis Gundy Inequalities .................... 225
  6.4.5 $S$-integrability of Internal Martingales ...................... 225
  6.4.6 $S$-continuity of Internal Martingales ........................ 226
  6.4.7 The Standard Part of Internal Martingales ................. 226

References ............................................................. 230

7 Stochastic Analysis ..................................................... 233
  Horst Osswald
  7.1 Introduction ....................................................... 233
  7.2 The Itô Integral for the Brownian Motion ....................... 237
    7.2.1 The $S$-Continuity of the Internal Integral ............... 238
    7.2.2 The $S$-Square-Integrability of the Internal
          Itô Integral ............................................ 243
    7.2.3 Adaptedness and Predictability ................................ 245
    7.2.4 The Standard Itô Integral .................................. 247
    7.2.5 Integrability of the Itô Integral ........................... 248
    7.2.6 The Wiener Measure .......................................... 250
  7.3 The Iterated Integral ............................................ 252
    7.3.1 The Definition of the Iterated Integral ..................... 252
    7.3.2 On Products of Iterated Integrals ............................ 256
    7.3.3 The Continuity of the Standard Iterated
          Integral Process ......................................... 259
    7.3.4 The $W_{C_{\text{loc}}}$-Measurability of the Iterated Itô Integral ... 260
    7.3.5 $I_n^M(f)$ is a Continuous Version of the Standard
          Part of $I_n^M(F)$ ........................................ 262
    7.3.6 Continuous Versions of Iterated Integral Processes ........ 263
  7.4 Beginning of Malliavin Calculus .................................. 264
    7.4.1 Chaos Decomposition ....................................... 265
    7.4.2 A Lifting Theorem for Functionals in $L_{W}(\Gamma_L)$ .... 270
    7.4.3 Computation of the Kernels ................................ 271
    7.4.4 The Kernels of the Product of Wiener Functionals ......... 273
    7.4.5 The Malliavin Derivative .................................. 276

Part V  Economics and Nonstandard Analysis

9 Nonstandard Analysis in Mathematical Economics 349
   Yeneng Sun
   9.1 Introduction 349
   9.2 Distribution and Integration of Correspondences 356
      9.2.1 Distribution of Correspondences 356
      9.2.2 Integration of Correspondences 361
   9.3 Nash Equilibria in Games with Many Players 363
      9.3.1 General Existence of Nash Equilibria in the Loeb Setting 364
      9.3.2 Nonexistence of Nash Equilibria in the Lebesgue Setting 365
   9.4 Nash Equilibria in Finite Games with Incomplete Information 368
      9.4.1 Nonexistence of Nash Equilibria for Games with Information 368
      9.4.2 Approximate Nash Equilibria for Large Finite Games and Idealizations 370
      9.4.3 General Existence of Nash Equilibria for Games with Information 373
   9.5 Exact Law of Large Numbers and Independent Set-Valued Processes 375
   9.6 Competitive Equilibria in Random Economies 380
   9.7 General Risk Analysis and Asset Pricing 383
      9.7.1 General Risk Analysis for Large Markets 383
      9.7.2 The Equivalence of Exact No Arbitrage and APT Pricing 388
   9.8 Independent Universal Random Matching 389
   9.9 Notes 392
References 396

Part VI  Combinatorial Number Theory

10 Density Problems and Freiman’s Inverse Problems 403
   Renling Jin
   10.1 Introduction 403
   10.2 Applications to Density Problems 405
      10.2.1 Sumset Phenomenon 407
      10.2.2 Plünnecke Type of Inequalities for Densities 411
   10.3 Applications to Freiman’s Inverse Problems 417
      10.3.1 Freiman’s Inverse Problem for Cuts 419
      10.3.2 Freiman’s $3|A| - 3 + b$ Conjecture 432
Nonstandard Analysis for the Working Mathematician
Loeb, P.; Wolff, M.P.H. (Eds.)
2015, XV, 481 p., Hardcover
ISBN: 978-94-017-7326-3
