Instruction for Authors

*Acta Metallurgica Sinica (English Letters)* is an international journal which presents compact reports of significant, original and timely research reflecting progress in metallurgy, materials science and engineering, including materials physics, physical metallurgy, and process metallurgy. Coverage extends to the fields of mining and ore dressing, production metallurgy, foundry, metal working, testing methods, powder metallurgy, composites, welding and joining, oxidation and corrosion. *Acta Metallurgica Sinica (English Letters)* is sponsored by the Chinese Society for Metals, and managed by the Institute of Metal Research, Chinese Academy of Sciences.

**Submission of papers**

Online Submission: Manuscripts should be submitted using the ScholarOne manuscript available at: http://mc03.manuscriptcentral.com/ams.

Submission of a manuscript must be the original work of the author(s) and has not been published elsewhere or under consideration for another publication, or a substantially similar form in any other language.

Authors are encouraged to recommend three to five individuals (including their research fields, e-mail, phone numbers and addresses) who are qualified to serve as referees for their paper.

**Manuscript Preparation**

All manuscripts should be written in English. Letters are generally no more than three journal pages. Research articles and review articles have no page limit. The supporting organization and the grant number should be given in the section "Acknowledgement(s)" of the manuscript.

Please Use double spacing and minimum 1-inch (3 cm) margins, and 12 pt font size standard fonts in the manuscript.

**Title**

The title of the paper should be concise but informative.

**Author name(s)**

A list of all authors, as well as corresponding addresses, should be provided on the title page. Authors’ names should be given in a consistent form on all publications to facilitate indexing. It will be better if the technical titles, fax number(s), e-mail address(es), and telephone number(s) are all provided.

Corresponding author. Clearly indicate who will handle correspondence at all stages of refereeing and publication, also post-publication. Ensure that phone numbers (with country and area code) are provided in addition to the e-mail address, the complete postal address and the title of a technical post and degree. Such as: Corresponding author. Prof., Ph.D.; Tel: +86 24 83978879; E-mail address: ams@imr.ac.cn. Contact details must be kept up to date by the corresponding author.

**Abstract**

The abstract should be no longer than 300 words. It should be informative, without descriptive words or citations, and contain the major conclusions and quantitative results or other significant items in the paper. Together with the title, the abstract must be adequate as an index to all the subjects treated in the paper, and will be used as a base for indexing.

**Keywords**

Immediately after the abstract, provide a maximum of 6 keywords.

**Mathematics**
Variables should appear in italic text. Vectors should appear in bold italic text. Capital and lower-case letters should be distinguished clearly where there could be confusion. Fractional exponents should be used to avoid root signs. Extra symbols should be introduced to avoid complicated exponents or where it is necessary to repeat a complicated expression a number of times. The slash (/) should be used wherever possible for fractions. Mathematical derivations that are easily found elsewhere in the literature should not be used.

**Notation**

Notation must be legible, clear, compact, and consistent with standard usage. All unusual symbols whose identity may not be obvious, including subscript or superscript, must be made comprehensible. Physical and mathematical variables should be in italic, vectors in boldface. Units, abbreviations and special functions should be upright. Please add notes to explain any other special symbols.

**Units**

Follow internationally accepted rules and conventions: use the international system of units (SI). If other quantities are mentioned, give their equivalent in SI.

**Figures**

Format: High-resolution figures must be uploaded during manuscript submission. The preferred format for figure submission is TIFF format (*.tif).

1. Image Size: An image intended for the journal's double column format (i.e., an image to fit into the space of a single column on the 2-column layout), should be sized to 8.4 cm. Images submitted for a layout that spans full columns (i.e., an image that will occupy the full-page width) should be sized to 15 cm, and complicated figures should have a maximum width of 17.4 cm. In the figures, the main lines should be about 0.3 mm in width, and the assistant lines 0.15 mm. Notations in the figures should be distinct and consistent with the same ones in the text, and their font size will be 8-10 pt.

2. Image Resolution: Line drawings and graphs must have a resolution of at least 1200 dpi when they are exported. Photographs and micrographs must have resolution of at least 300 dpi (600 dpi if there is text or line art in the figure). Please use LZW compression (which does not affect resolution) when saving figure files. Lower-resolution images will not reproduce properly and will not be accepted.

3. Color: Submit color graphics in CMYK format; the colors chosen must reproduce effectively and the colors should be distinguishable when printed in black and white; The descriptions of figures in text and captions must be sufficiently clear for both online and print copy.

**Tables**

Tables, numbered in order of appearance, should be appended on separate sheets and identified with appropriate titles. The table title, which should be brief, goes above the table. A detailed description of its contents or table footnotes should be given directly below the body of the table.

**References**

References must be published work, and numbered consecutively in order of their first citation. References should be listed individually at the end of the text and indicated in the text with a superscript number in square brackets. All of the authors, as well as the titles of the reference articles should be given. It is strongly recommend that authors try to employ the recently published articles, and it is appropriate that more than 50% references are published in the recent three years. Here are some examples of how to set the most common reference types:
References to journal publication:

References to book:

Reference to proceeding:

Reference to dissertation

Reference to patent

Reference to online literature

Research Data Policy

The journal encourages authors, where possible and applicable, to deposit data that support the findings of their research in a public repository. Authors and editors who do not have a preferred repository should consult Springer Nature’s list of repositories and research data policy.

- List of Repositories
- Research Data Policy

General repositories - for all types of research data - such as figshare and Dryad may also be used. Datasets that are assigned digital object identifiers (DOIs) by a data repository may be cited in the reference list. Data citations should include the minimum information recommended by DataCite: authors, title, publisher (repository name), identifier.

- DataCite

Springer Nature provides a research data policy support service for authors and editors, which can be contacted at researchdata@springernature.com.

This service provides advice on research data policy compliance and on finding research data repositories. It is independent of journal, book and conference proceedings editorial offices and does not advise on specific manuscripts.
