SPECIAL ISSUE ON
Recent Advances in Mining Intelligence and Context-Awareness on IoT-based Platforms

Overview:
To develop innovative and intelligent machines that are fit for futuristic use, it is necessary to take a holistic approach in order to recognize various situations and environmental issues. To do this, various types of machine learning mechanisms have been developed during past decades. Recently, deep Learning has been proposed as a new area of Machine Learning and Mining researches, which have been investigated with the objective of moving Machine Learning closer to one of its original goals. Deep learning is being tried to apply for various recognition fields where researchers feel difficulty, but can achieve very promising result such as Alphago by Google deep mind. This kind of learning mechanism can cooperate with various sensors, which are able to gather large information.

Also, the development of sensor networks, particularly in the last years, has extended their applicability in various domains, such as heritage preservation, environmental motoring and human activity recognition. Especially, to achieve highly natural interpretation of the environmental situation, various kinds of sensors should be widely employed in recognition system.

Therefore, integration of sensor data with intelligent machine learning scheme is a natural choice and henceforth the sensor-based recognition technology is emerging as an important field of research including artificial intelligence (AI). This special issue aims to highlight the latest research results and advances on algorithms and technologies for various sensor-based recognition systems. It will include related topics and demonstrate original research work in this field of research. It will also cover the results of investigation on these topics featuring novel solutions and discuss the future trend of research in this domain. The MIKE2017 will be an interdisciplinary conference that brings together researchers and practitioners from the domains of learning algorithms, data mining, machine learning, knowledge exploration, large-scale data analytics, big data, soft computing, information systems, and so on. The selected outstanding papers from MIKE2017 will be recommended to this special issue.

Topics
Topics of interest include, but are not limited to, the following scope:

| - Advances in Machine Learning | - Visual analytics for text mining |
| - Algorithms for Intelligent Learning | /exploration Visual Exploration |
| - Analogical, cognitive, and creative reasoning | - Real-time applications of data mining |
| - Business Intelligence | - Learning mechanisms from wireless |
| - Case Based Recommender Systems | sensor systems |
| - Collective Learning and Tagging | - Self-learning structure and framework |
| - Context and location aware techniques | - Security problem in multimedia data |
| - Cross / Multi Language content mining | mining and distribution |
| - Crowdsourcing & Crowd Mining Algorithms | - Emotion and expression recognition |
| and Systems | algorithms for human interactive |
| - Big Data Search (HANA, Terracotta, Hadoop) | applications |
Important Dates

- Submission deadline: February 28, 2018
- Notification of the first-round review: April 15, 2018
- Revised submission due: May 30, 2018
- Notification of the second-round review: July 15, 2018
- Final notice of acceptance/reject: August 30, 2018

Submission Procedure

Authors should follow the MONET Journal manuscript format described at the journal site. Manuscripts should be submitted on-line through http://www.editorialmanager.com/mone/.
A copy of the manuscript should also be emailed to the Guest Editors at the following email mipsan@sejong.ac.kr or bg.kim@ieee.org, joeljr@ieee.org.

Guest Editors:
Cheonshik Kim (Leading), Sejong University, Seoul, Republic of Korea; Email: mipsan@sejong.ac.kr
Bryan B. Kim, Sookmyung Women’s University, Seoul, Republic of Korea; Email: bg.kim@ieee.org
Joel J. P. C. Rodrigues, National Institute of Telecommunications (Inatel), Brazil, Instituto de Telecomunicações, Portugal; Email: joeljr@ieee.org
Mobile Networks and Applications
The Journal of SPECIAL ISSUES on Mobility of Systems, Users, Data and Computing
Editor-in-Chief: Chlamtac, I.
ISSN: 1383-469X (print version)
ISSN: 1572-8153 (electronic version)
Journal no. 11036
