In the context of rapid globalization and technological capacity, the world’s economies today are driven increasingly by knowledge—the expertise, skills, experience, education, understanding, awareness, perception, and other qualities required to communicate, interpret, and analyze information. New wealth is created by the application of knowledge to improve productivity—and to create new products, services, systems, and process (i.e., to innovate). The Journal of the Knowledge Economy focuses on the dynamics of the knowledge-based economy, with an emphasis on the role of knowledge creation, diffusion, and application across three economic levels: (1) the systemic “meta” or “macro”-level, (2) the organizational “meso”-level, and (3) the individual “micro”-level. The journal incorporates insights from the fields of economics, management, law, sociology, anthropology, psychology, and political science to shed new light on the evolving role of knowledge, with a particular emphasis on how innovation can be leveraged to provide solutions to complex problems and issues, including global crises in environmental sustainability, education, and economic development.

Articles emphasize empirical studies, underscoring a comparative approach, and, to a lesser extent, case studies and theoretical articles. The journal balances practice/application and theory/concepts. All papers appearing in the Journal of the Knowledge Economy undergo an initial editorial screening followed by a rigorous double-blind peer review by at least two referees.

Authors are requested to submit their manuscripts to Elias G. Carayannis, Professor of Science, Technology, Innovation and Entrepreneurship, School of Business, George Washington University, Funger Hall, Suite 515C, Washington, DC 20052, Email: caraye@gwu.edu.
