Cross-Cultural Research in Health, Illness and Well-Being

Publish your next book in this series!

Aims and Scope

Series Editor: Pranee Liamputtong

This new series examines determinants of health from a cross-cultural perspective. The focus of this perspective is on factors which could influence and determine the health and well-being of people. These factors include biological and genetic factors; health behaviors; socio-cultural and socio-economic factors and environment factors. This series fills a gap by including books which are research-based and contain diverse issues relevant to determinants of health including emerging health issues, such as HIV/AIDS and other infectious and non-infectious diseases/illnesses from a cross-cultural perspective. Volumes in the series will be a valuable resource for researchers and students in sociology, quality of life studies, anthropology, medicine, public health, social work and medicine.

The Editor welcomes proposals for edited volumes and monographs contributions on topics such as:

- Social Determinants of Health, Illness and Well-being
- Antiretroviral therapy (ART) and Adherence
- Emerging Infectious Diseases
- HIV/AIDS and Ageing
- Mental Health
- Quality of Life and HIV/AIDS
- Disclosure, Discrimination and Support and Infectious Diseases
- Sexuality and Sexual Behavior
- HIV testing and counseling
- Living with HIV/AIDS
- Cross-Cultural Perspectives on HIV/AIDS
- Gender and health from a Cross-Cultural Perspective
- Health, Illness and Well-Being and Marginalised Groups
- Body Images and Health

We look forward to receiving your book proposal
