The *Canadian Journal of Anesthesia* (CJA) is committed to the highest standards of research reporting. Part of high quality research reporting involves pre-specifying interventions, outcomes, and analyses to reduce bias and to improve the quality of inferences gained from biomedical research. To this end, the CJA’s Editorial Board has formulated the following policies regarding research registration:

**Registration of Clinical Trials**¹
Effective January 1, 2016 the CJA will not consider manuscripts reporting the results of randomized clinical trials (RCTs) whose protocols have not been registered at a publicly accessible registration site at or before the time of the first patient enrolment. Examples of suitable registries include ClinicalTrials.gov² or ISRCTN.³

**Registration of Observational Studies**
Registration of observational research is strongly encouraged but is not mandated at this time. (Note that ClinicalTrials.gov explicitly supports the registration of observational studies.⁴)

**Registration of Systematic Reviews**
Effective January 1, 2017, the Journal will not consider manuscripts reporting systematic reviews and meta-analyses whose protocols have not been registered with PROSPERO⁵ or an equivalent publicly accessible registry for systematic reviews.

Hilary P. Grocott, MD, FRCPC
Editor-in-Chief of the *Canadian Journal of Anesthesia*
