Special Issue of Indian Journal of Virology

Title: “Emerging viral diseases of wild and domestic animals in the developing world”

Recent years have witnessed a sharp rise in the number of emerging and re-emerging viral diseases of livestock. Many of these viruses, including Influenza, Corona, Hanta and Ebola, are of public health importance. The increased incidence of viral diseases can be attributed to several factors: changes in the landscape and atmosphere, globalization, and life cycle of viral vectors. In addition, due to widespread deforestation, wild animals are increasingly coming in direct contact with domestic and pet animals, leading to viral jump from one species to another.

This special issue of “Indian Journal of Virology” on “Emerging viral diseases of wild and domestic animals in the developing world” invites reviews, original submissions and commentaries on the areas, including epidemiology, virus, pathogenesis, diagnosis, prevention, viral immunology, vaccines and experimental models. The articles can be submitted online at www.editorialmanager.com/injv/. After logging into author-account, from the drop-down menu of the article type, you need to select the article type Special Issue: Animal virus.

In case you face any difficulty while submitting the article, please contact Mr Ashok Kumar at Ashok.Kumar@springer.com or call him at 011-45755819.

We intend to publish the special issue during early 2013.
