## Environmental Geochemistry and Health

Official Journal of the Society for Environmental Geochemistry and Health

Editor-in-Chief: M.H. Wong

- ▶ Publishes original research papers, short communications and reviews across the broad field of environmental geochemistry
- ▶ Surveys soil, water and plants to show how major and trace elements are distributed geographically
- ▶ Includes research papers directly linking health and the environment
- ▶ 100% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

for a Topical Collection of papers on

### ***Fracking (Hydraulic Fracturing) - Environmental and Health Issues***

The journal is seeking papers that deal with any environmental and/or health issues related to the mining technique known as fracking (hydraulic fracturing). Keywords in your article might include shale gas, hydraulic fracturing, fracking, etc.

Papers may be submitted through the journal's regular online submission system. Please select '*Topical Collection: Fracking (Hydraulic Fracturing)*' as the article type when submitting. There is no deadline for submissions to this topical collection.

---

The discipline of environmental geochemistry and health establishes and explains links between the natural or disturbed chemical composition of the earth's surface and the health of plants, animals and people. Beneficial elements regulate or promote enzymatic and hormonal activity whereas other elements may be toxic. Bedrock geochemistry controls the composition of soil and hence that of water and vegetation. Environmental issues, such as pollution, arising from the extraction and use of mineral resources, are discussed. The effects of contaminants introduced into the earth's geochemical systems are examined. Geochemical surveys of soil, water and plants show how major and trace elements are distributed geographically.

Impact Factor: 2.616 (2016), Journal Citation Reports®
