Fish Physiology and Biochemistry

Editor-in-Chief: P. Kestemont

- Publishes original research papers in all aspects of the physiology and biochemistry of fishes
- Includes experimental work in biochemistry and structure of organisms, organs, tissues, and cells; nutritional, osmotic, ionic, respiratory and excretory homeostasis, and more
- Presents full papers, brief communications, unsolicited and invited reviews, and editorial comments and announcements
- 98% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

_Fish Physiology and Biochemistry_ (FISH) is an international journal publishing original research papers and reviews on all physiological aspects of fishes. The Editorial Board of FISH gives a high priority to mechanistic studies in the field of fish physiology, from an environmental and evolutionary perspective. All levels of biological organization are considered, from molecular to whole organismal one. Emphasis should be given to functional understanding and links between physiological/biochemical traits and evolutionary history as well as ecology and environmental plasticity of fish species. Except in specific cases, purely descriptive papers are not considered for peer-reviewing and publication in FISH.

Impact Factor: 1.647 (2016), Journal Citation Reports®
