Journal of Biomolecular NMR
Editor-in-Chief: G. Wagner

- Presents technical developments and innovative applications of nuclear magnetic resonance spectroscopy in the study of structure and dynamic properties of biopolymers
- Discusses applications in solution, liquid crystals, solids and mixed environments such as membranes
- Coverage includes: Three-dimensional structure determination of biological macromolecules (polypeptides/proteins, DNA, RNA, oligosaccharides) by NMR; New NMR techniques for studies of biological macromolecules; Novel approaches to computer-aided automated analysis of multidimensional NMR spectra
- 94% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

This journal presents research on technical developments and **innovative applications of nuclear magnetic resonance spectroscopy** in the study of **structure and dynamic properties of biopolymers** in solution, liquid crystals, solids and mixed environments such as membranes.

Coverage includes: Three-dimensional structure determination of biological macromolecules (polypeptides/proteins, DNA, RNA, oligosaccharides) by NMR; New NMR techniques for studies of biological macromolecules; Novel approaches to computer-aided automated analysis of multidimensional NMR spectra; Computational methods for the structural interpretation of NMR data, including structure refinement; Comparisons of structures determined by NMR with those obtained by other methods, e.g. by diffraction techniques with protein single crystals; New techniques of sample preparation for NMR experiments, such as biosynthetic and chemical methods for isotope labeling, preparation of nutrients for biosynthetic isotope labeling.

Impact Factor: 2.410 (2016), Journal Citation Reports®
