The Journal of Psycholinguistic Research covers a broad range of approaches to the study of the communicative process, including: the social and anthropological bases of communication; development of speech and language; semantics (problems in linguistic meaning); and biological foundations. It also examines the psychopathology of language and cognition as well as the neuropsychology of language and cognition.

The journal publishes carefully selected papers from the several disciplines engaged in psycholinguistic research, providing a single, recognized medium for communications among linguists, psychologists, biologists, sociologists, and others.

Impact Factor: 0.660 (2016), Journal Citation Reports®
