Journal of Seismology
Main editor: M. García Fernández

► Specializes in all observational and theoretical aspects related to earthquake occurrence
► Topics include seismic hazard or risk, engineering seismology, physics of fault systems, triggered and induced seismicity, mining seismology, volcano seismology, earthquake prediction and more
► Presents extended review papers, as well as short communications
► 100% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

The Journal of Seismology is an international journal specializing in all observational and theoretical aspects related to earthquake occurrence. The editors approach Seismology as a broad interdisciplinary effort, with well balanced observational, modeling and applied aspects.

Topics include seismotectonics, seismicity, historical seismicity, seismic source physics, strong ground motion studies, seismic hazard or risk, engineering seismology, physics of fault systems, triggered and induced seismicity, mining seismology, volcano seismology, earthquake prediction, structural investigations ranging from local to regional and global studies with a particular focus on passive experiments.

The journal publishes short communications as well as extended review papers.

Impact Factor: 1.089 (2016), Journal Citation Reports®
