Russian Journal of Bioorganic Chemistry
Editor-in-Chief: V.T. Ivanov

- Examines the structure, functions, structure-activity relationships, and synthesis of biopolymers, and low molecular-mass biologically active compounds
- Covers neuro- and immunochemistry, biotechnology, and ecology
- Benefits scientists, university teachers, students, and researchers

The Russian Journal of Bioorganic Chemistry (Bioorganicheskaya khimiya) publishes reviews and the results of original experimental and theoretical investigations on the structure, function, structure–activity relation, and synthesis of biopolymers, such as proteins, nucleic acids, polysaccharides, mixed biopolymers, and their complexes, and low-molecular-mass biologically active compounds (peptides, sugars, lipids, antibiotics, etc.). The journal also covers selected aspects of neuro- and immunochemistry, biotechnology, and ecology. The journal is intended for scientists, tutors and students in higher schools, and researchers in industrial, medical, agricultural, and environmental control laboratories.

Impact Factor: 0.690 (2016), Journal Citation Reports®
