Neurochemical Journal
Co-Editor-in-Chief: N.V. Gulyaeva; M.I. Aghajanov

Papers containing the results of original research, general and speculative reviews are rapidly published in the journal. Major developments in neurochemistry, descriptions of new neurochemical techniques as well as theoretical considerations suggesting novel principles and approaches to the topical problems are in the center of attention. Reader can find also chronicles of congresses and conferences with short review of the most sensational reports, presentations of new hypotheses and even advertisements for some reagents and equipment. The journal has a truly international character and serves as a bridge between neurochemists of many countries. It seems to be a unique contribution to the neuroscience literature. The journal key audience includes academics, practitioners and students in the field of studies.

The journal provides a source for communication on the latest findings in all areas of contemporary neurochemistry and other fields of relevance (including molecular biology, biochemistry, physiology, neuroimmunology, pharmacology) in order to expand understanding of the functions of nervous system. It presents papers on functional neurochemistry, nervous system receptors, neurotransmitters, myelin, chromaffin granules and other components of the nervous system, as well as neurophysiological and clinical aspects, behavioral reactions, etc. Relevant topics include structure and function of the nervous system proteins, neuropeptides, nucleic acids, nucleotides, lipids, and other biologically active components. The journal presents theoretical material suggesting novel principles and approaches to neurochemical problems, presentations of new hypotheses and significant findings, discussions, chronicles of congresses, meetings, and conferences with short presentations of the most sensational and timely reports, information on the activity of the Russian and International Neurochemical Societies, as well as advertisements of reagents and equipment.

Impact Factor: 0.340 (2016), Journal Citation Reports*
