**Molecular Biotechnology**

Editor-in-Chief: G. Basile

- Covers the application of molecular biology to both basic and applied biotechnology research
- Areas of interest include the stability and expression of cloned gene products, cell transformation, gene cloning systems, next generation sequencing, nanobiotechnology, molecular and cell biology automation, and more
- Also presents review articles on subjects in these areas
- 93% of authors who answered a survey reported that they would definitely publish or probably publish in the journal again

Molecular Biotechnology publishes original research papers on the application of molecular biology to both basic and applied research in biotechnology. Particular areas of interest include the stability and expression of cloned gene products, cell transformation, gene cloning systems and the production of recombinant proteins, protein purification and analysis, transgenic species, developmental biology, mutation analysis, the applications of DNA fingerprinting, RNA interference, and PCR technology, microarray technology, proteomics, mass spectrometry, bioinformatics, plant molecular biology, microbial genetics, gene probes and the diagnosis of disease, pharmaceuticals, therapeutic agents, vaccines, gene targeting, gene therapy, stem cell technology and tissue engineering, antisense technology, protein engineering and enzyme technology, monoclonal antibodies, glyco biology and glycomics, and agricultural biotechnology. The journal also presents review articles on subjects in these areas.

Impact Factor: 1.634 (2016), Journal Citation Reports®
