Genes & Nutrition
Co-Editor-in-Chief: G. Perozzi; F. Virgili; J. Kaput; M. Radonjic

- Examines the relationship between genetics and nutrition, with the ultimate goal of improving human health
- Publishes original research articles as well as review articles to help deliver products with medically proven use
- Ideal for nutritionists, healthcare providers and all those interested in preventive medicine

This journal examines the relationship between genetics and nutrition, with the ultimate goal of improving human health. It publishes original research articles and review articles on preclinical research data coming largely from animal, cell culture and other experimental models as well as critical evaluations of human experimental data to help deliver products with medically proven use.

Ideal for nutritionists, healthcare providers and all those interested in preventive medicine, Genes & Nutrition includes coverage of such areas as: the study of individual genetic differences in response to dietary components, the development of safe and effective diet therapies for individuals or subgroups of the population on the basis of nutrigenomic data, the development of models of disease mechanism based on understanding the genome, interactions of diet and nutrition with genetic susceptibility to cancer, and much more.

Impact Factor: 2.797 (2016), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access
- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
