Molecular Cancer
Editors-in-Chief: C. Nicot

- High visibility - receives over 70,000 articles accesses a month
- Ranked in the top 25% in the Oncology category of Journal Citation Reports
- Welcomes articles in both molecular and clinical aspects of cancer research

Molecular Cancer is an open access, peer-reviewed journal interested in attracting high-quality original research and reviews that present or highlight significant advances in all areas of cancer and related biomedical science.

Molecular Cancer provides an important forum for exciting findings in cancer-related research, presenting an unparalleled opportunity to communicate information to specialists and the public.

Molecular Cancer is interested in articles from basic, translational and clinical research. Topics of interest include, but are not limited to: tumor biology, angiogenesis, animal models, metastasis, cancer antigens and the immune response to them, cellular signaling and molecular biology, epidemiology, genetic and molecular profiling of cancer targets, cancer stem cells, DNA damage and repair, cell cycle, apoptosis, virology and vaccine- and antibody-based cancer therapies.

Impact Factor: 6.204 (2016), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access
- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
