Population Health Metrics
Editors-in-Chief: C.J.L. Murray; A.D. Lopez

➤ Publishes cutting-edge methodology studies measuring population health at a global level
➤ High ranked journal, in the top 10 for subject category Public, Environmental and Occupational Health.
➤ High-profile Editorial Board

Population Health Metrics addresses issues relating to concepts, methods, ethics applications and results in the measurement of the health of populations. This includes areas of health state measurement and valuation, summary measures of levels of population health, and inequality in population health, descriptive epidemiology at the population level, burden of disease and injury analysis, disease and risk factor modelling for populations and comparative assessment of risks to health at population level. The journal aims to provide a platform for researchers in all these areas to share their findings with the global research community.

Impact Factor: 2.910 (2016), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access
➤ High visibility thanks to unrestricted online access
➤ Rigorous peer-review and high-quality author services
➤ Creative Commons licensed – authors retain copyright
➤ Citation tracking and inclusion in bibliographic databases
➤ Easy compliance with open access mandates
