Journal of Neuroinflammation

Editor-in-Chief: S. Griffin; R.E. Mrak

- Top-ranking journal focusing on the innate immunological response of the nervous system
- High quality peer review: average time to first decision under 30 days
- High visibility for your work: over 180,000 monthly accesses

Journal of Neuroinflammation is an open access, peer-reviewed journal that focuses on interactions of the immune system (and especially the innate immune system) with the nervous system. This includes the roles of CNS immune mediators (such as microglia and astrocytes, and their expressed cytokines and chemokines) as well as the roles of the peripheral immune system, complement proteins, acute phase proteins, oxidative injury and related molecular processes.

Impact Factor: 5.102 (2016), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
