Journal of Biological Engineering

Editor-in-Chief: J.-Y. Yoon; R. Rao

- Engineering solutions to advance biological science
- World renowned Editorial Board
- Official journal of the Institute of Biological Engineering

Biological engineering is an emerging discipline that encompasses engineering theory and practice connected to and derived from the science of biology, just as mechanical engineering and electrical engineering are rooted in physics and chemical engineering in chemistry. Topical areas include, but are not limited to:

- Synthetic biology and cellular design
- Engineering of biomolecular and cellular devices
- Bioproduction and bioproduct engineering
- Ecological and environmental engineering
- Biological engineering education and the biodesign process

As the official journal of the Institute of Biological Engineering, *Journal of Biological Engineering* provides a home for all research on the continuum of biological information science, molecules and cells, product formation, wastes and remediation, and educational advances in curriculum content and pedagogy at the undergraduate and graduate-levels.

Manuscripts should explore commonalities with other fields of application by providing some discussion of the broader context of the work and how it connects to other areas within the field.

Impact Factor: 3.660 (2016), Journal Citation Reports®

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
