Journal of Internet Services and Applications
Editors-in-Chief: F. Kon; G. Blair

- Up-to-date coverage of networking, communication, content distribution, security, scalability, and management
- Covers and new developments in mobile, pervasive and context-aware computing
- Includes a focus on security and privacy

In a world moving rapidly online, and becoming more and more computer-dependent, the Journal of Internet Services and Applications (JISA) focuses on networking, communication, content distribution, security, scalability, and management. Coverage includes security and privacy; middleware; mobile, ubiquitous, pervasive, and context-aware computing; and applications.

Topics include: Networking protocols and architectures; web protocols, standards, and development; security and privacy; middleware; mobile, ubiquitous, pervasive, and context-aware computing and applications.

The journal went open access in 2013, which means that all articles published since then are freely available online.

Giving authors in their area of expertise the opportunity to publish open access
- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
